COMPONENT 1
Interoperable platform for forensic police intelligence services

- Real-time and ubiquitous operation.
- Relevant early warning system for a streamlined FP response.
- Detection of patterns and connections in test results.
- Learning from data.
- Interoperation with other national and international databases and services.
- Secure communications.

COMPONENT 2
Data integration and innovative solutions in different scenarios. Digital chain of custody

- Crime scene digitisation and documentation.
- Real-time biometrics detection and identification. On-site analysis.
- Voice integration.

COMPONENT 4
Innovative management solutions

- Intelligent resource and analysis support.
- Workload allocation system.
- Quality standards.

COMPONENT 3
Remote crime scene assistance and training system

- Real-time interaction between physical and virtual crime scene.
- Automatic and guided support for experts (visual and textual information).
- Reassessment of the crime scene and interactive training.
