

# SicurZone

**SICURIT**  
PERIMETER PROTECTION SYSTEMS

**Multiple Zones Fence Detection Sensor**  
Cost-Effective | Fast & Easy Deployment

# Product Introduction

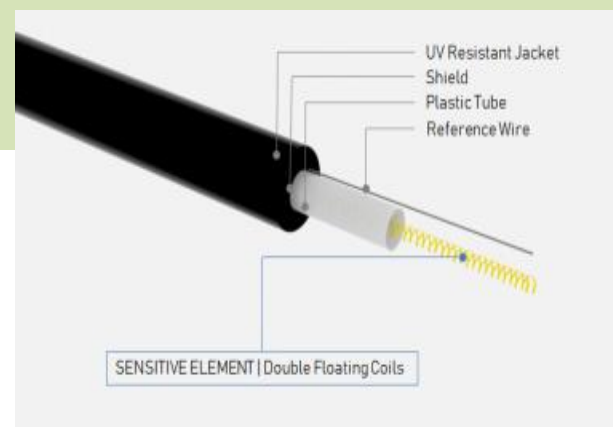

## SicurZone

### **SicurZone™**

is SICURIT brand new standalone **ZONE**-based fence detection sensor designed to cost-effectively secure most metal fence types by means of a special sensor cable.

### **SicurZone™**

detects vibrations caused by mechanical impulses arising from attempts to climb, lift up or cut through the fence ensuring high level of detection and deterrence.

## Zone-based PIDS

# SicurZone

Unlike conventional cost-effective sensors which offer only one zone and a sole sensitivity setting per controller, SicurZone™ adopts small “junction” Sector-Boxes within the detection line to define both zones and individual sensitivity settings.

Up to 8 Sector-Boxes can be connected to each controller while each zone can be extended up to 125m, bringing the maximum range of SicurZone™ Controller to 1km (8x 125m)

Sector-Box

Associated Detection Line  
> Up to 125m

## System Components

### SicurZone™

consists of 3 main Elements:

#### Controller (P/N FENSECTAN)

The **Controller** manages and supervises **up to 8 Sector-Boxes** (which define lengths and sensitivity of each zone, ed.), provides **8x Intrusion, 1x Tamper 1x Low-Battery and 1x Fault Alarm** indications via O.C. Outputs and connect to HyperPower™ for remote **Alarm supervision and diagnostic via RS485**

#### Sector-Box (P/N FENSECT)

The **Sector-Box** can manage **up to 125m of Sensor cable** (1-125m).

Detection parameters, pulses and sensitivity, can be achieved very quickly by means of Trimmers and Dip Switch. Battery-powered guarantees a life span of 3 years

#### Sensor Cable (P/N FENCBVB)

**Made of internal springs wrapped wire free to move inside of a small plastic conduit and its reference shield**, once mounted and properly fixed on a fence generate a stable electrostatic charges which is affected by little cable vibrations. The vibration create a movement of spring inside on plastic conduit and change the electrical charges that is opportunely analyzed by the Sector-Box which set off an alarm from the Controller if this exceed the desired threshold.

# FENSECTAN Controller

## FENSECTAN

manages and supervises up to 8 Sector-Boxes.

Each Sector-Box Alarm, Tamper and low-Battery status is reported on the Controller via dedicated O.C. Outputs.

### Features:

- Outputs: 12 O.C. of which:
  - 8 used to define Zones
  - 1 used for Tamper
  - 1 used for Cut / Short Circuit
  - 1 used for Sector-Box Low Battery
  - 1 used for Communication Supervision
- RS485: 1 to connect to HP for remote Alarm supervision
- Lead-in Cable: FTP/UTP or RG59
- Power-Supply: 12VDC
- Power Cons.: < 20mA (250mA in Alarm condition with LED activated)
- Working Temp.: -25°C / +65°C
- Box IP Grade: IP65

**FENSECTAN is optionally available pre-assembled in IP65 cabinets** complete of 230V Power Supply, CMH9000SZ (if remotely connected to HyperPower™ Alarm and Even management Platform) and 3/4G communication modules.

## FENSECT Sector-Box

### FENSECT

3V battery powered, the Sector-Box manages up to 125m of FLEXCBVB Sensor cable.

Detection line fine tuning is easily achieved by means of trimmers and Dip-switch.

The First Sector-Box is connected to the Controller via FTP, UTP or RG59 cable (up to 200m of lead-in cable)

### Features:

Power-Supply: 3V Lithium Battery

Battery Type: CR17450 @ 2300mA

Power Cons.: 25µA (250µA in Alarm condition)

Av. Battery Life: 3 Years

Working Temp.: -25°C / +65°C

Box IP Grade: IP65

Weight: 200gr

Controller

FTP/UTP/RG59

Sector-Box 1

FLEXCBVB

Sector-Box N

FLEXCBVB

## FLEXCBVB Sensor Cable

### FLEXCBVB

This unique Sensor Cable, which is made of internal springs wrapped wire free to move inside of a small plastic conduit and its reference shield, once mounted and properly fixed on a fence generate a stable electrostatic charges which is affected by little cable vibrations. The vibration create a movement of spring inside on plastic conduit and change the electrical charge that is opportunely analyzed by the Sector-Box which set off an alarm from the Controller if this exceed the desired threshold.

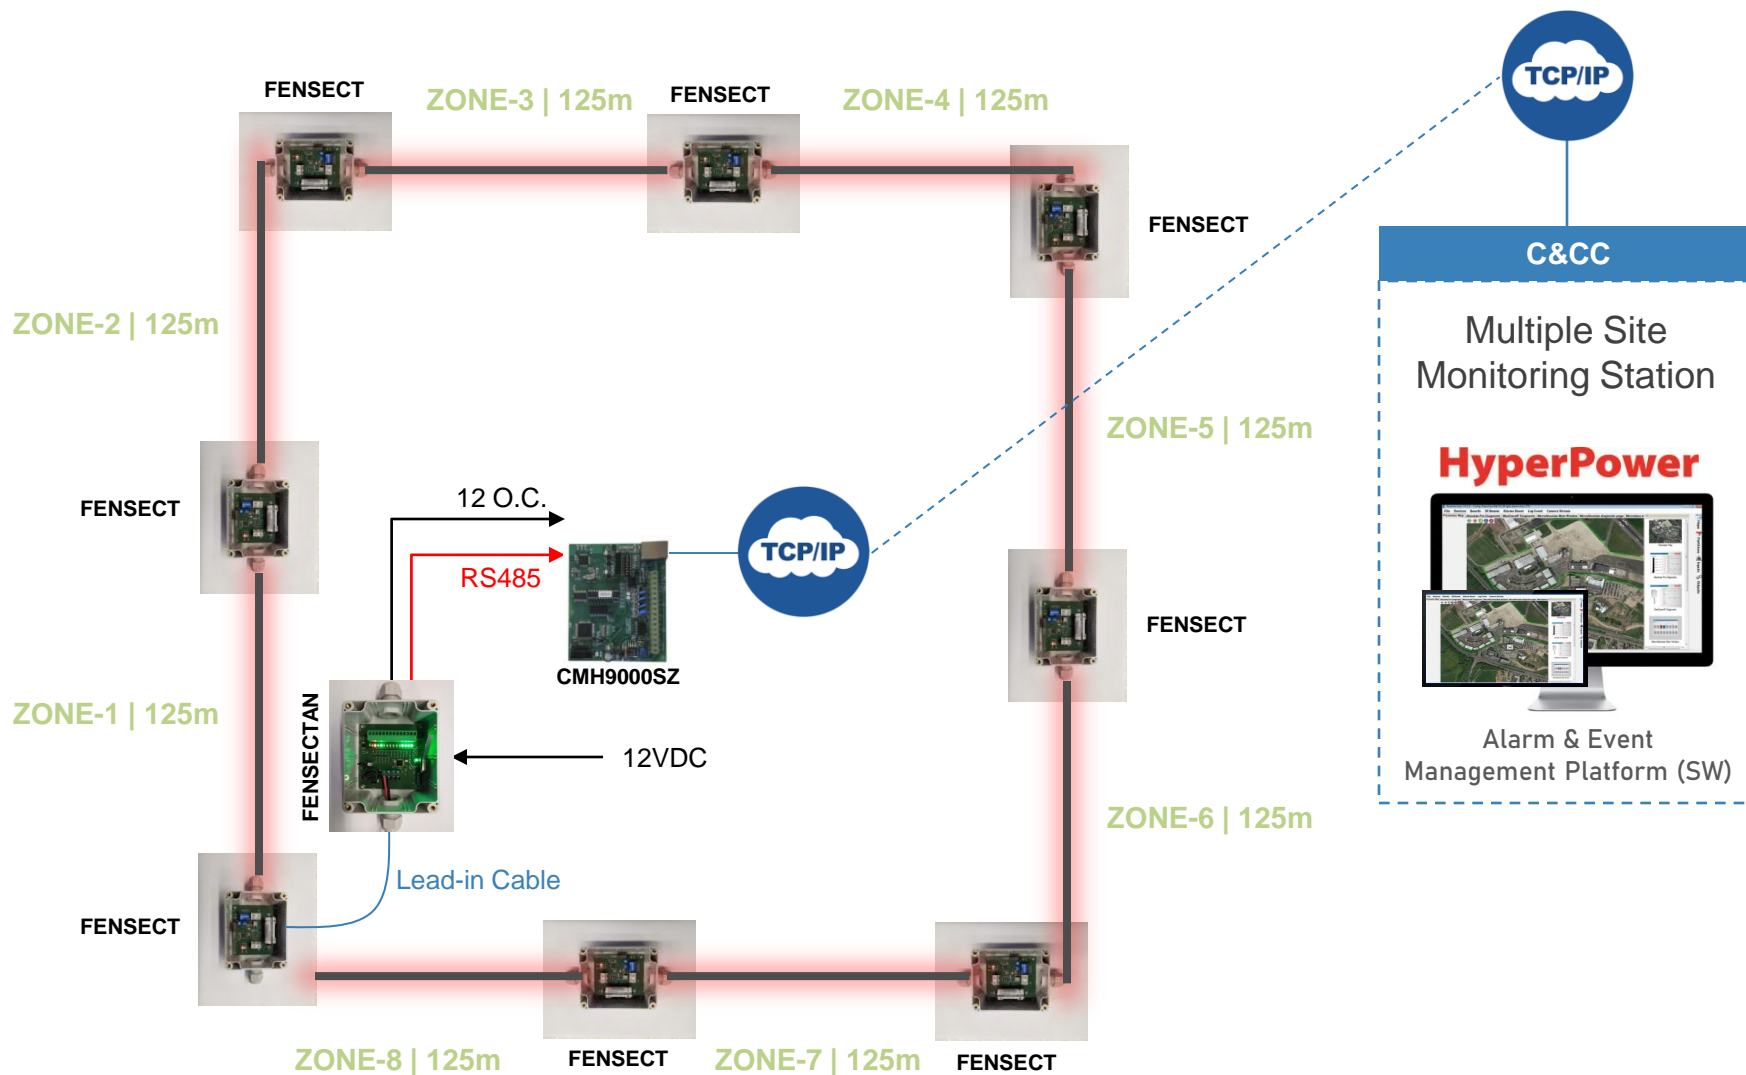

### Features:

Minimum Zone Length:	1m
Maximum Zone Length:	125m
Section Diameter:	Ø12mm
Working Temperature:	-40°C / +80°C

### HIGH UV RESISTANCE

## Up to 1000m 8 Zones

## Remote Supervision

### Multiple Site Remote Supervision

**HYPERPOWER™**  
Alarm Supervision, Diagnostic  
and Control SW

SDK

- Genetec
- Milestone
- Lensec
- Advancis
- IndigoVision
- Geutebureck
- ModBus TCP
- Metel

## Application Example

**Small Site 30x30m**  
( e.g. Communication & Cellular Towers)

### BOQ Example (with remote supervision via HP)

1x	FENSECTAN (or FENSECTANKIT)	Field Components
4x	FENSECT	
120m	FLEXCBVB	
ca. 250x	Plastic Ties (UV Resistant)	
Few m.	Lead-in Cable	
1x	CMH9000SZ (RS485/IP Interface Board)	C&C
1x	HyperPower™ Alarm&Event Platform (SW)	
Nx	Licenses to unlock CMH9000SZ	

# SICURIT

## PERIMETER PROTECTION SYSTEMS

SICURIT Perimeter Protection Systems is a leading Italian manufacturer of Perimeter Intrusion Detection System (PIDS) designed to protect Critical Infrastructures. Committed to innovation and product diversification, SICURIT products range includes patented bi-directional IP Native IR & DT barriers (Virtual Fences) for both ground and wall-mounting applications and the unique of its kind HSF Activa™, an All-in-One high-security fence with integrated and completely hidden/protected Pin-Point detection technology.
