

# ANLYVIS

AnlyVis AI makes Value

Unlock Visual Intelligence For Smart Response

# Our Vision

**Anlyvis exists to make the world safer, smarter, and more seamless through visual AI.**

**We empower cities and businesses globally with visual AI to unlock real-time visual intelligence for enabling smarter and quicker decision-making responsibly and at scale.**

# Real-time visual intelligence for enabling smarter and quicker decision-making

# Real-time visual intelligence for enabling smarter and quicker decision-making

| Operational Efficiency  | Decision Intelligence  | Risk Mitigation   | Quality & Experience   |
|---|--|---|--|
| Automate processes with AI-driven computer vision, reducing manual workloads. | Gain actionable insights from live data streams for faster, smarter choices. | Proactively detect safety hazards, defects, and anomalies before they escalate. | Improve product consistency and customer interactions with precision AI analytics. |

# Common Challenges

- ❌ Rely on outdated and legacy devices, infrastructure, and systems.
- ❌ Limit hardware and software solutions to meet unique operational needs.
- ❌ Organisational culture concerns and uncertain ROIs

# Unlock Visual Intelligence For Smart Response

**Anlyvis empowers cities and enterprises with a visual Edge AIoT platform and comprehensive solutions to boost efficiency, enhance decision-making, mitigate risks, and elevate quality—all in real-time.**

# Our Process

**1.**  
**Assess project parameters and requirements for the AI solution implementation.**

**2.**  
**Recommend suitable hardware, software, and AI features, for the visual capture systems.**

**3.**  
**Train and identify data capture parameters after implementation and installation**

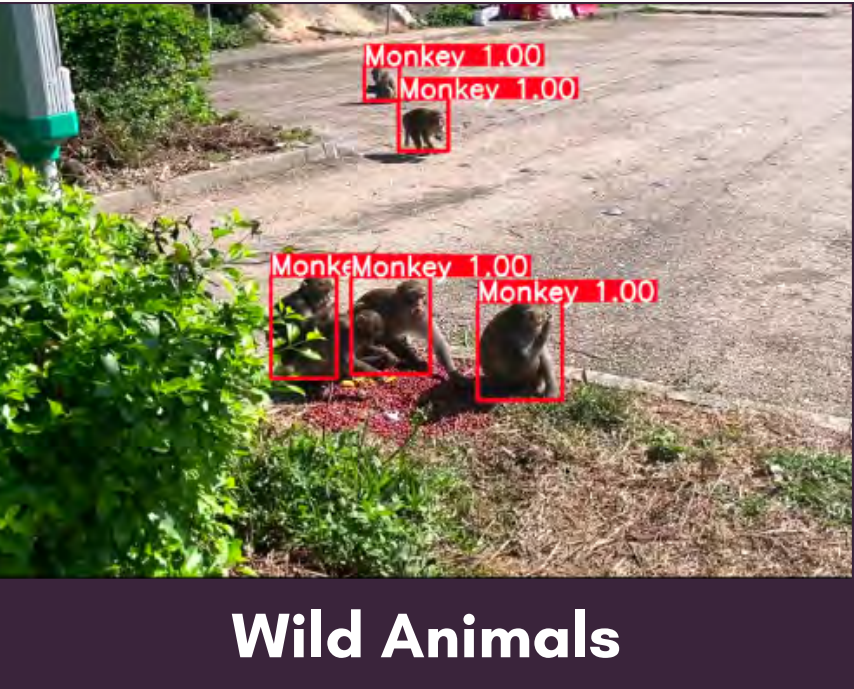

**4.**  
**Configure alerts or notifications based on specific commands with continuous enhancements.**

# 40+ Projects in Cities & Businesses

## Visual Edge AI Feature References:

And, more.

# What Sets Us Apart

- ✓ **Visual Edge AIoT Specialists – Committed to providing real-time, efficient AI solutions for businesses and cities.**
- ✓ **Full AIoT Stack – Offering hardware, software, and expert support in a cohesive ecosystem.**
- ✓ **Proven Global Expertise – Trusted across industries with hands-on case experience to guide clients to achieve success.**

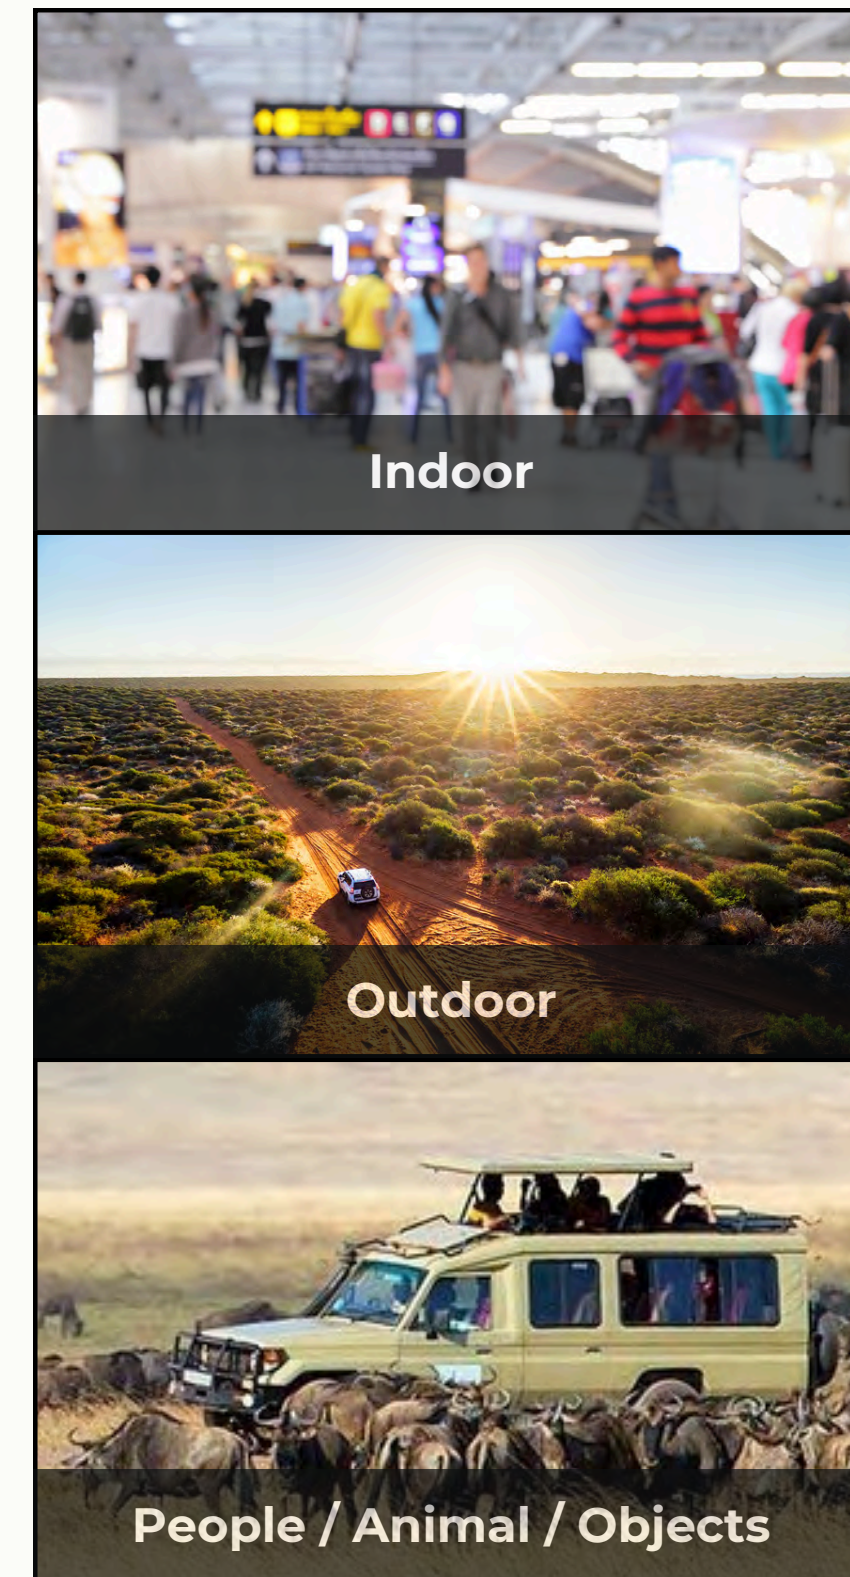

# Real-time Visual Data Analysis

Edge AI models run locally on devices, such as cameras or robots, without requiring cloud connectivity.

- Real-time processing (low latency)
- Works offline (no internet needed)
- Data privacy (sensitive data remains on-device)
- Lower bandwidth costs (low cloud dependency)

# Competitive Edge

|               | Edge AI   | Cloud AI  | AI Camera  |
|---------------|---|---|--|
| Effectiveness | Ultra-low (ms) for Real-time, Privacy sensitive, or offline applications  | High (100ms-2s); Only for Non-time-sensitive tasks              | Canned, standard with limitation<br>Due to hardware limitations, performance can suffer for complex tasks. |
| Privacy       | High (on-device)  | Low (data in cloud)   | Low (prone to cyberattack)   |
| Affordability | Low (almost no cloud fees)  | High (cloud fees)   | Low but only for low-tech scenes (not useful)  |
| Portability   | High (process data locally without relying on internet connectivity - suitable for mobile and remote applications). | Low (requires constant internet access for remote use)          | Portable without extra hardware or internet to work.   |
| Adaptability  | Moderate to high adaptability as the updates can be done over-the-air (OTA).  | The system can be easily adjusted to allow for central updates. | Limited as the AI is pre-built into the device - hard to update  |

With a growth rate of 30%+, Edge AI is gaining traction due to 5G, IoT, and privacy concerns, positioning it as the future of embedded intelligence.
