

Resolve

MRD guided treatment

<https://resolve-leukemia.eu>

Who we are

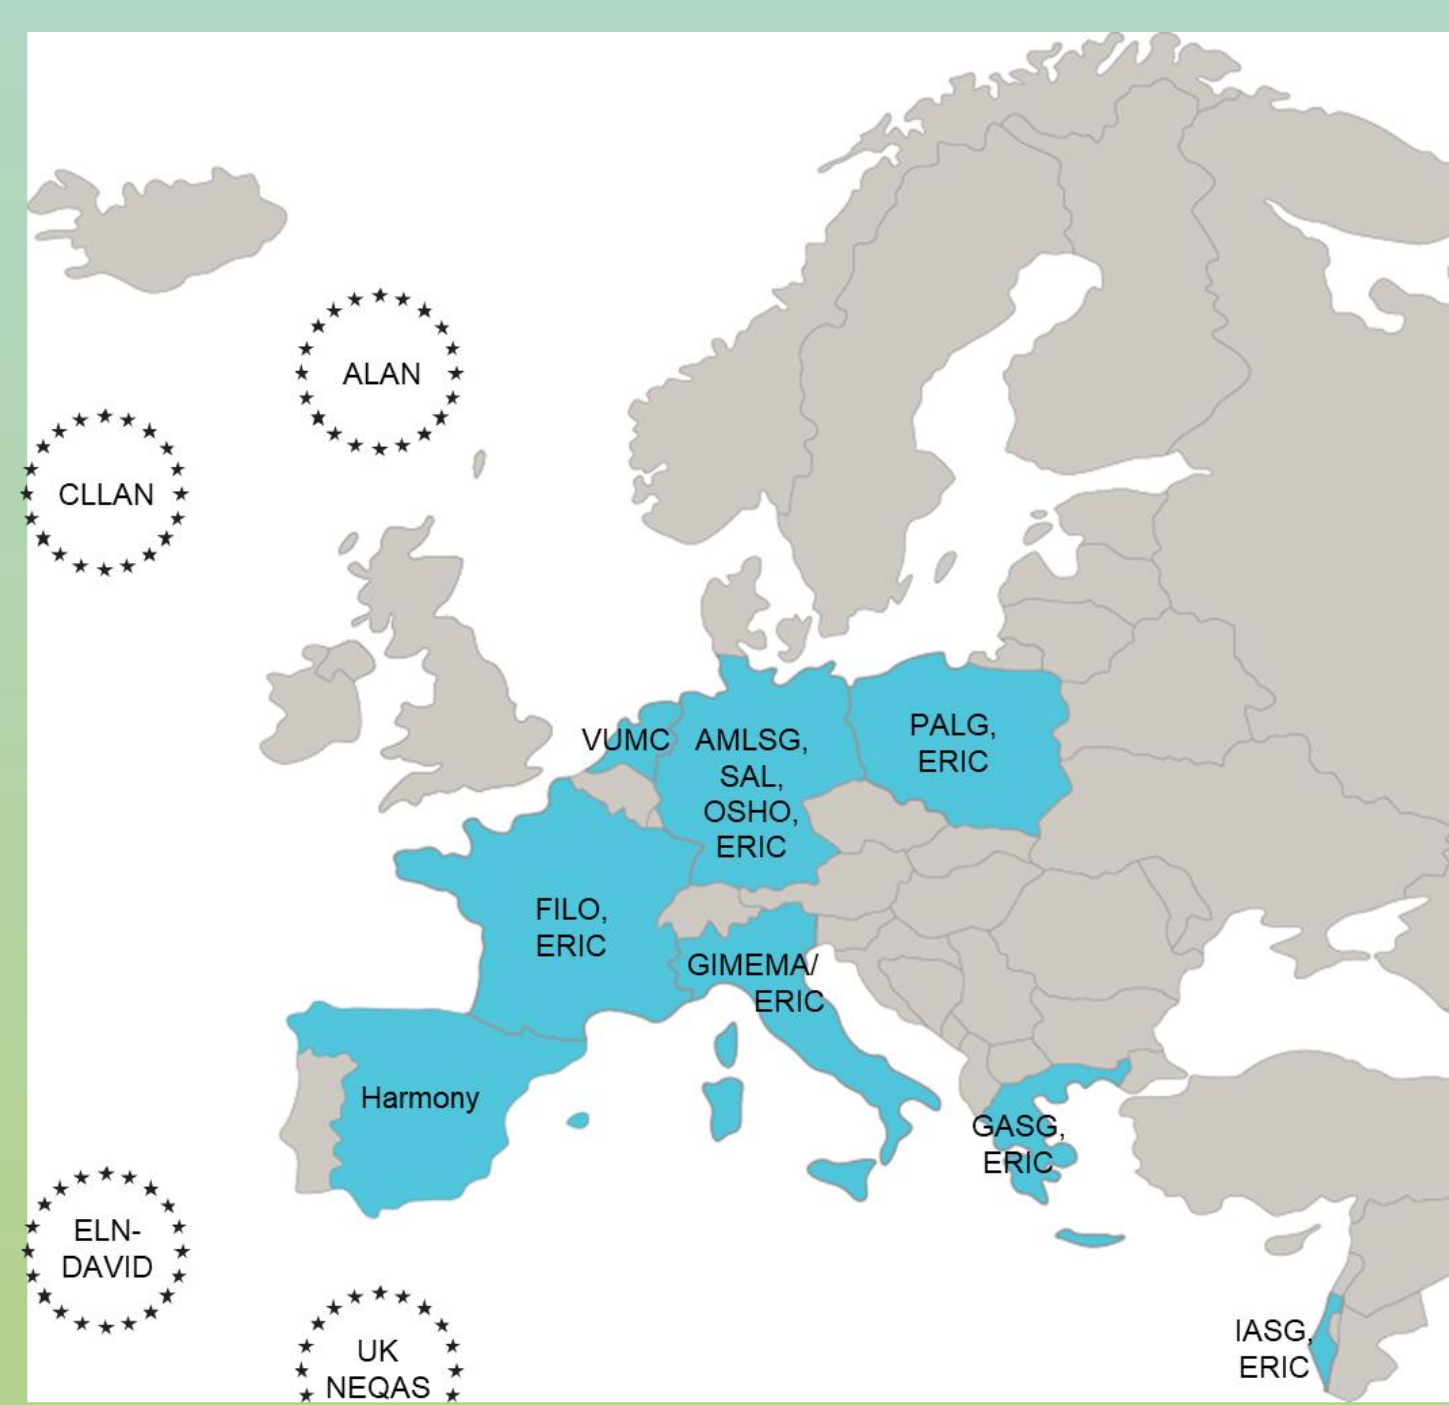

The RESOLVE consortium is a multidisciplinary European and international partnership bringing together leading researchers, clinicians, patient advocacy organisations and technology experts. Our 22 partner institutions combine expertise in leukemia, MRD diagnostics, clinical trials, data science, health economics and patient-centred research to advance personalized leukemia care across Europe.

What we are working on

We are establishing MRD as a reliable treatment-guiding biomarker for acute myeloid leukemia (AML) and chronic lymphocytic leukemia (CLL). We are building a real-world MRD registry and data platform, standardizing decentralized MRD testing across Europe, engaging patients and stakeholders, and running two multinational pragmatic trials to determine whether treatment intensity can safely be reduced in MRD-negative patients.

What's the one thing we need next

We need to turn our infrastructure and scientific expertise into robust real-world evidence: recruit and follow eligible patients across participating countries, generate high-quality standardized MRD data, and complete the RESOLVE pragmatic trials. This evidence is essential to demonstrate whether MRD-guided treatment can safely reduce treatment burden while maintaining outcomes - and ultimately support adoption of MRD testing in routine European healthcare.
