Philosophy of the Sea

Italian Heritage with a Greek Signature of Expertise in a Yacht of Absolute Prestige

A rare opportunity to complete an Italian-built 30m yacht, crafted to be fully shaped around your personal vision and exacting standards

Inspired by the FERRETTI 880

This yacht draws its design philosophy from the iconic FERRETTI 880, a benchmark of Italian elegance, refined proportions, and dynamic performance.

Its exterior profile reflects balance, authority, and timeless sophistication, appealing to owners who value the heritage of Italian yacht design combined with strong offshore capability.

It is conceived for discerning buyers seeking the stature and presence of 30 meter yacht, while benefiting from a strategically attractive entry point into this prestigious segment.

Italian Construction – Hull Built in Genoa

The hull was constructed in Genoa, one of Italy's most respected and historically significant shipbuilding centers. Genoa represents generations of naval craftsmanship, engineering precision, and uncompromising quality standards. This Italian-built foundation provides structural credibility and authentic design pedigree, forming a solid platform for the creation of a fully bespoke yacht.

Built to RINA Classification Standards

Construction has been carried out in accordance with RINA Classification standards, one of the most recognized classification societies in the maritime industry.

RINA compliance ensures:

- Verified structural integrity
- Engineering reliability
- Full international safety compliance
- Long-term asset value protection

This certification adds both technical reassurance and investment security.

70% Completed Construction Stage

This advanced stage offers significant advantages:

- A secure and well-established structural platform
- A considerably reduced completion timeline
- Limited construction uncertainty
- Immediate flexibility for interior and systems customization

Rather than beginning from concept, the future owner steps into a technically grounded and well-progressed project.

Completion by GEM Services & Yachting

The final completion will be undertaken by GEM Services & Yachting, a boutique firm specialized in yacht completion, refit supervision, and technical management.

The project will be supported by experienced naval architects and designers with international exposure and collaborations with leading European shipyards.

The completion phase will be executed with:

- Strict technical oversight
- Budget transparency and cost control
- Refined execution standards
- Owner-focused customization

The approach combines discretion, precision, and attention to detail throughout the final build stage.

Layout and Comfort

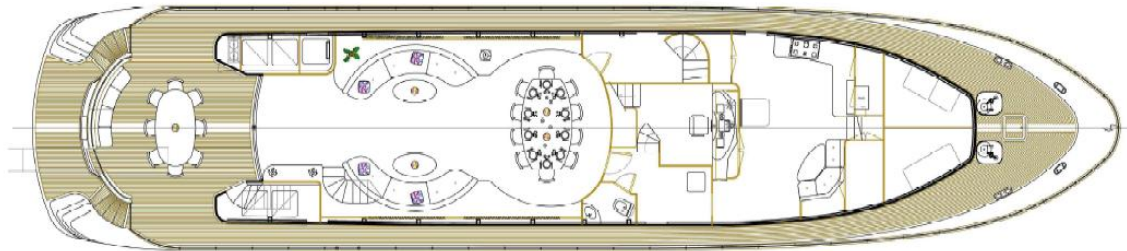

Accommodation for up to 10 Guests

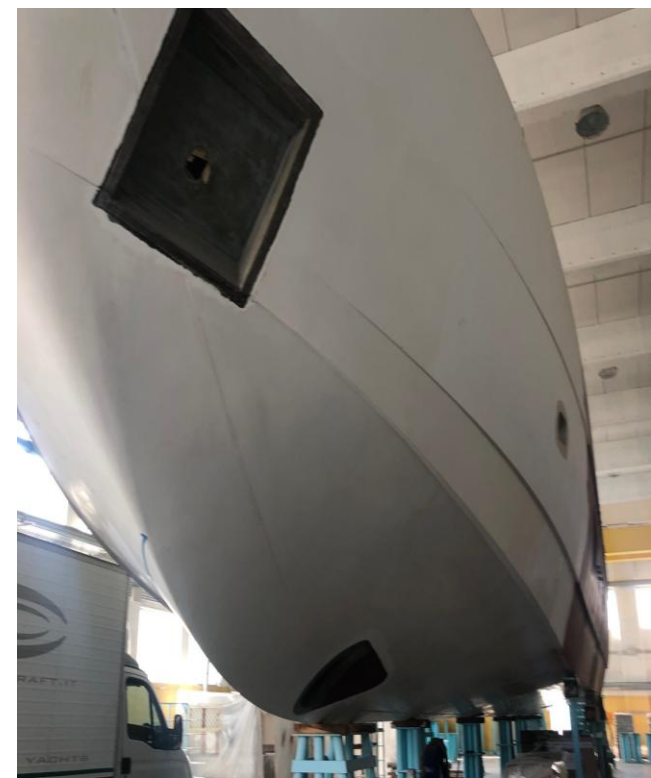

- 1 Master Suite
- 1 VIP Cabin
- 3 Twin Cabins

Accommodation for up to 6 Crew

- 3 Double Crew Cabins

The layout balances private owner space with operational efficiency, delivering both comfort and functionality at sea.

Absolute Customization

The final configuration of the yacht, including layout refinements, interior design, materials selection, onboard systems, and technological integration, will be developed in close collaboration with the owner.

This allows the creation of a truly personalized yacht, tailored to individual lifestyle preferences and operational expectations.

The project represents a rare opportunity to transform an Italian-built platform into a fully bespoke superyacht.

Why This Represents a Strategic Alternative to Purchasing a Completed Yacht

Acquiring a fully completed 30meter yacht in today's market typically involves:

- Higher capital commitment
- Limited customization
- Design compromises
- Potential early refit requirements

This project offers a fundamentally different approach.

It provides an Italian-built, RINA-compliant foundation at an advanced stage of construction, allowing the future owner to complete the yacht according to personal standards on a secure technical base.

Rather than buying a predefined product, the owner shapes the final outcome.

Investment Control and Long-Term Value

This opportunity allows:

- Structured budget allocation
 - Integration of modern systems from the outset
 - Reduced future upgrade costs
 - Full technical transparency
- Completion under professional supervision enhances long-term credibility and resale positioning. It supports both lifestyle value and capital protection.

An Opportunity to Create, Not Simply Acquire

This is not simply the purchase of a yacht.

It is the development of a 30-meter Italian-built vessel, completed under Greek technical expertise and tailored entirely to the owner's vision.

In a market defined by compromise, this project offers control, flexibility, and genuine differentiation.

Hull Price

The hull is offered at **€ 380,000**. Completion costs will be quoted separately, based on the desired specifications.

This structure ensures financial flexibility and full design freedom.
