Buildometric
Clear data, real impact

Evidence Your Impact with Ease

Buildometric gives lenders transparent, verifiable sustainability evidence for each construction project they finance. Our platform supports ESG assessment, ongoing sustainability monitoring and borrower reporting aligned to your lending frameworks and KPIs.

We streamline the collection and checking of a full range of project-level evidence for sustainability-linked lending, such as SAP and EPC ratings, non-fossil-fuel heating, affordable housing delivery, MMC adoption, biodiversity net gain, waste diversion, fair employment practice and more.

Buildometric provides an auditable dataset to support lending with confidence.

Built to validate ESG-linked criteria:

- Early eligibility checks
- Clear dashboards and reports
- Fast identification of gaps and risks
- Consistent evidence across multiple projects and regions

Design-to-Delivery Continuity

Create a verifiable sustainability record from design intent to as-built evidence. Reduce onboarding and certifying friction with a single trail from targets to evidence.

Productivity Gains

Stop chasing information. Borrowers upload evidence directly so lenders get real-time validation of the criteria required under their specific impact lending framework.

High Quality Information

Reduce risk and uncertainty with high-quality data. Identify projects with strong sustainability performance and clearly communicate how they support the green transition.

We are inviting impact-focused lenders to try Buildometric in our free-of-charge pilot projects.
