

SoundCollect

Join the community who is transforming
the sound of our cities

Download the app and share your oasis of calm.

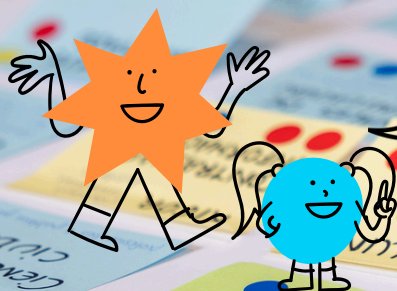

Do you remember the sound of silence?
Noise has become the soundtrack to our
lives, with noise pollution being the **number
one cause of environmental complaints.**

The WHO states that at least 20% of the
European population is exposed to high
noise levels during the day and more than
15% at night, which can have serious health

effects, such as circulatory system
conditions, stress or reduced sleep quality.

One way to combat the environmental
impact of noise pollution is to **identify and
preserve quiet areas.**

Thanks to public participation,
SoundCollect gathers the information
needed to **create collaborative maps of
quiet areas and co-design solutions** for
their preservation.

SoundCollect is a **free science
tool** designed to identify and
characterise **quiet areas in
urban or rural settings** through
active listening by citizens.

Connect with the sound of your community!

Your city, your sound. Protect quiet
spaces through citizen science

Join the sound of our community with SoundCollect:

With **SoundCollect**, citizens play an active role in identifying and protecting quiet areas.

- Learning to listen actively.
- Collecting and managing noise data using our specialised app.
- Creating collaborative maps of quiet areas in urban or rural settings.
- Co-designing innovative solutions to preserve quiet areas.

Download our free app and help us discover acoustically quiet areas that act as **refuges**!

SoundCollect is part of the RIS3CAT Public Procurement of Innovation Programme of the Government of Catalonia, co-funded by the European Regional Development Fund (ERDF) 2021-2027.

Ask for more information about our training plans and services to take that first step towards change.
