

- 1996**
 - Commercial activity began with the "F&K Foreign Trade" company
 - General trading
- 1997**
 - Partnership with Ginray / Taiwan to sell spring machines
- 2000**
 - Start representing of round and flat product manufacturers of S. Korea, agent of POSCO
- 2003**
 - Start important partnership with UFT
- 2004**
 - Re-named as Telsama
 - First ISO 9001 certification
 - First export sales of clips & springs as a trader
- 2009**
 - Moving to NOSAB
 - Start production of clips & springs
- 2015**
 - First ISO/TS 16949 certification
 - Moving to present premises
- 2018**
 - ISO 9001:2015 certification
 - IATF 16949:2016 certification
 - Started to produce parts for defense industry according to NATO standards.
- 2020**
 - Company legal status has been changed to A.S.
 - New name is Telsama Metal A.S.
- 2021**
 - Company moved to new building of 3.160 sqmeters within the same industrial districts.

- ▶ All types of hook pull springs, torsion springs, 2 and 3 dimensional wire forms, carbon steel spring wires and stainless and alloy spring wires can be processed in our machines.
- ▶ Our production capacity :
0,20 mm – 4,00 mm

Torsion springs are helical springs that offer resistance to twist or rotationally applied force. Depending on the application, they can work in a clockwise or counter-clockwise rotations, thus determining the direction of the wind.

Recent investments enable Telsama Metal to not only produce torsion springs, but also to meet any type of use and loading requirement with the production of double-torsion springs.

- ▶ All types of hook pull springs, torsion springs, 2 and 3 dimensional wire forms, carbon steel spring wires and stainless and alloy spring wires can be processed in our machines.
- ▶ Our production capacity :
0,20 mm – 4,00 mm

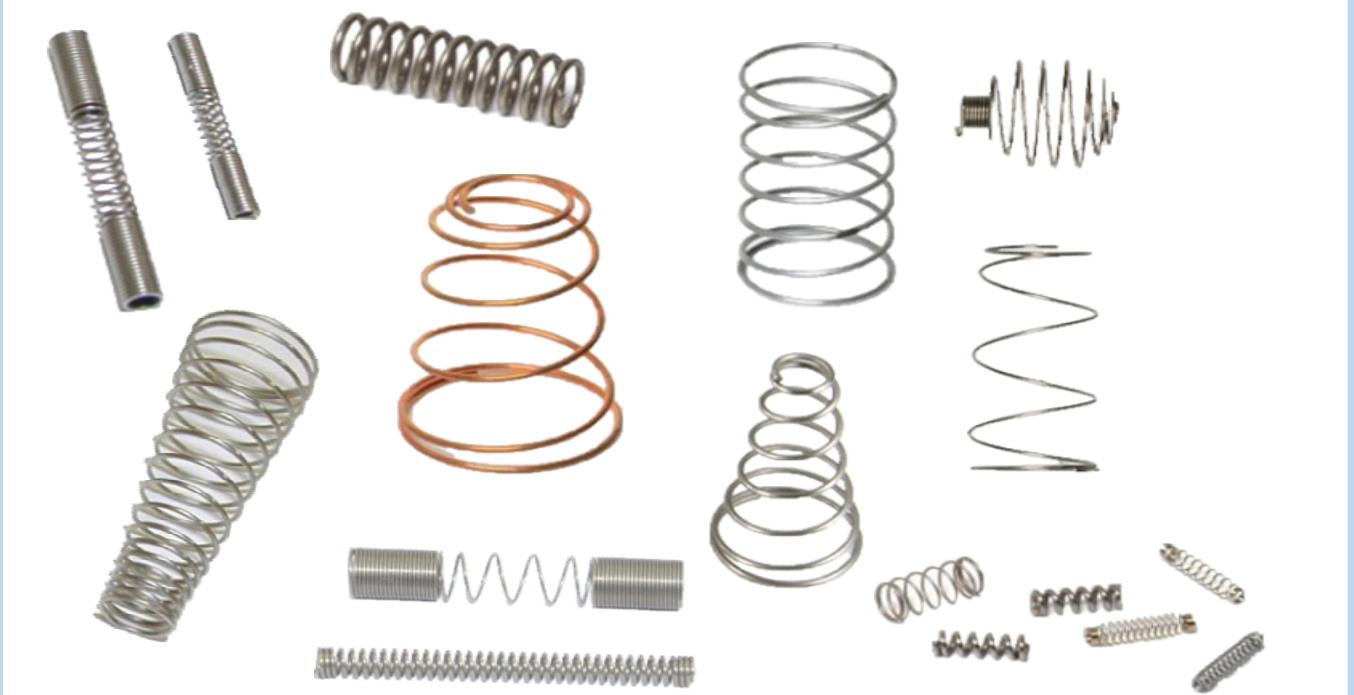

Tensioning springs, or traction springs, react to an axial force that tends to extend their length, with or without initial tension.

Telsama Metal produces tensioning springs for a wide variety of industrial sectors, designing them according to the specific requests of customers and producing them in different materials and shapes according to their use.

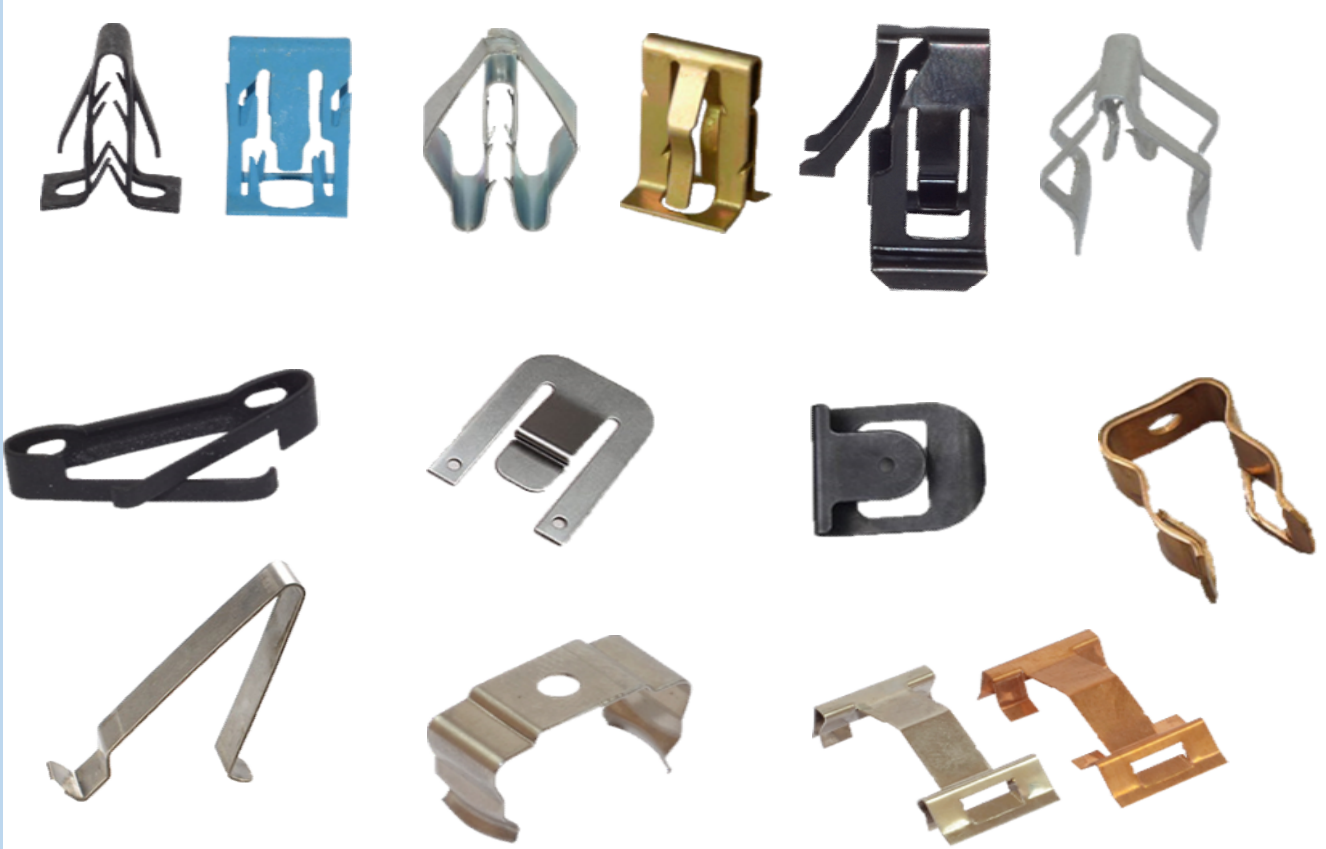

- ▶ All types of hook pull springs, torsion springs, 2 and 3 dimensional wire forms, carbon steel spring wires and stainless and alloy spring wires can be processed in our machines.
- ▶ Our production capacity :
0,20 mm – 4,00 mm

Shaped springs have a particular shape to perform the most varied functions, including functions that are less standard than other types of springs, for this reason they require a careful and specific design. The technical department of Telsama Metal has gained extensive experience over the years in the design of this type of spring and is able to offer all the advice necessary to create products with excellent technical characteristics for all uses.

- ▶ CNC-controlled machines can produce oil seal springs with all types of compression springs, carbon steel spring wires and stainless and alloy spring wires.
- ▶ Our production capacity :
0,15 mm - 1,40 mm non-grinding compression springs.

A compression or pressure spring is an open-coiled, helical spring designed to offer resistance to linear compressing and push forces. The compression springs by Telsama Metal are made using the best raw materials and following the highest quality standards, in different diameters and sizes, to meet all loading and use requirements, from industrial environments to those specific to the hi-tech industry.

- ▶ All types of wire and sheet metal clips & bushes, spring carbon steel spring wires and stainless and alloy spring plates can be processed in our machines.
- ▶ Our production capacity:
Band thickness: 0,20 mm - 3,00 mm
Band width: 0,08 mm - 60,00 mm

- ▶ All types of wire and sheet metal clips & bushes, spring carbon steel spring wires and stainless and alloy spring plates can be processed in our machines.
- ▶ Our production capacity:
Band thickness: 0,20 mm - 3,00 mm
Band width: 0,08 mm - 60,00 mm

Strip springs are shaped according to their use, and can have many different shapes and sizes. They are usually made according to customer's drawings or specific customer requirements.

Telsama Metal manufactures strip springs using state-of-the-art production systems to perfectly meet any need, and using different types of materials, from steel to bronze.

Controls are carried out throughout all stages of production using high-precision instruments to ensure a high level of quality and compliance with customer requirements.

- ▶ Each type of pipe can be produced in 2 and 3 dimensions in CNC controlled multi skid pipe bending machine.
- ▶ Our production capacity: wall thickness 0,50 mm - 1,50 mm
