## Blue X

Profil is proud to bring innovation to the market of medical articles, with the best technology available in the world.

It is a PVC mono filament yarn with special active ingredient Barium Sulfate.

This yarn has the amazing property of blocking the passage of X-rays, which makes it detectable on a radiograph.

Blue X<sup>®</sup> yarns are designed to be used in gauzes and other textile materials used in surgeries.

In compliance with the standards of the medical sector, these materials become visible in radiographs taken after surgery, providing safety for medical teams and patients.

Produced with non-toxic material in blue color, Blue X<sup>®</sup> yarn is safe and easy to see and identify.

As shown in the photo below, Blue X<sup>®</sup> yarn has a high tenacity polyester core yarn inside, and a PVC outer layer, which provides resistance and efficiency in the weaving process.

Blue X Cross Section

Blue X<sup>®</sup> radio opaque PVC yarns: State-of-the-art technology for your health and safety.
