

Who we are

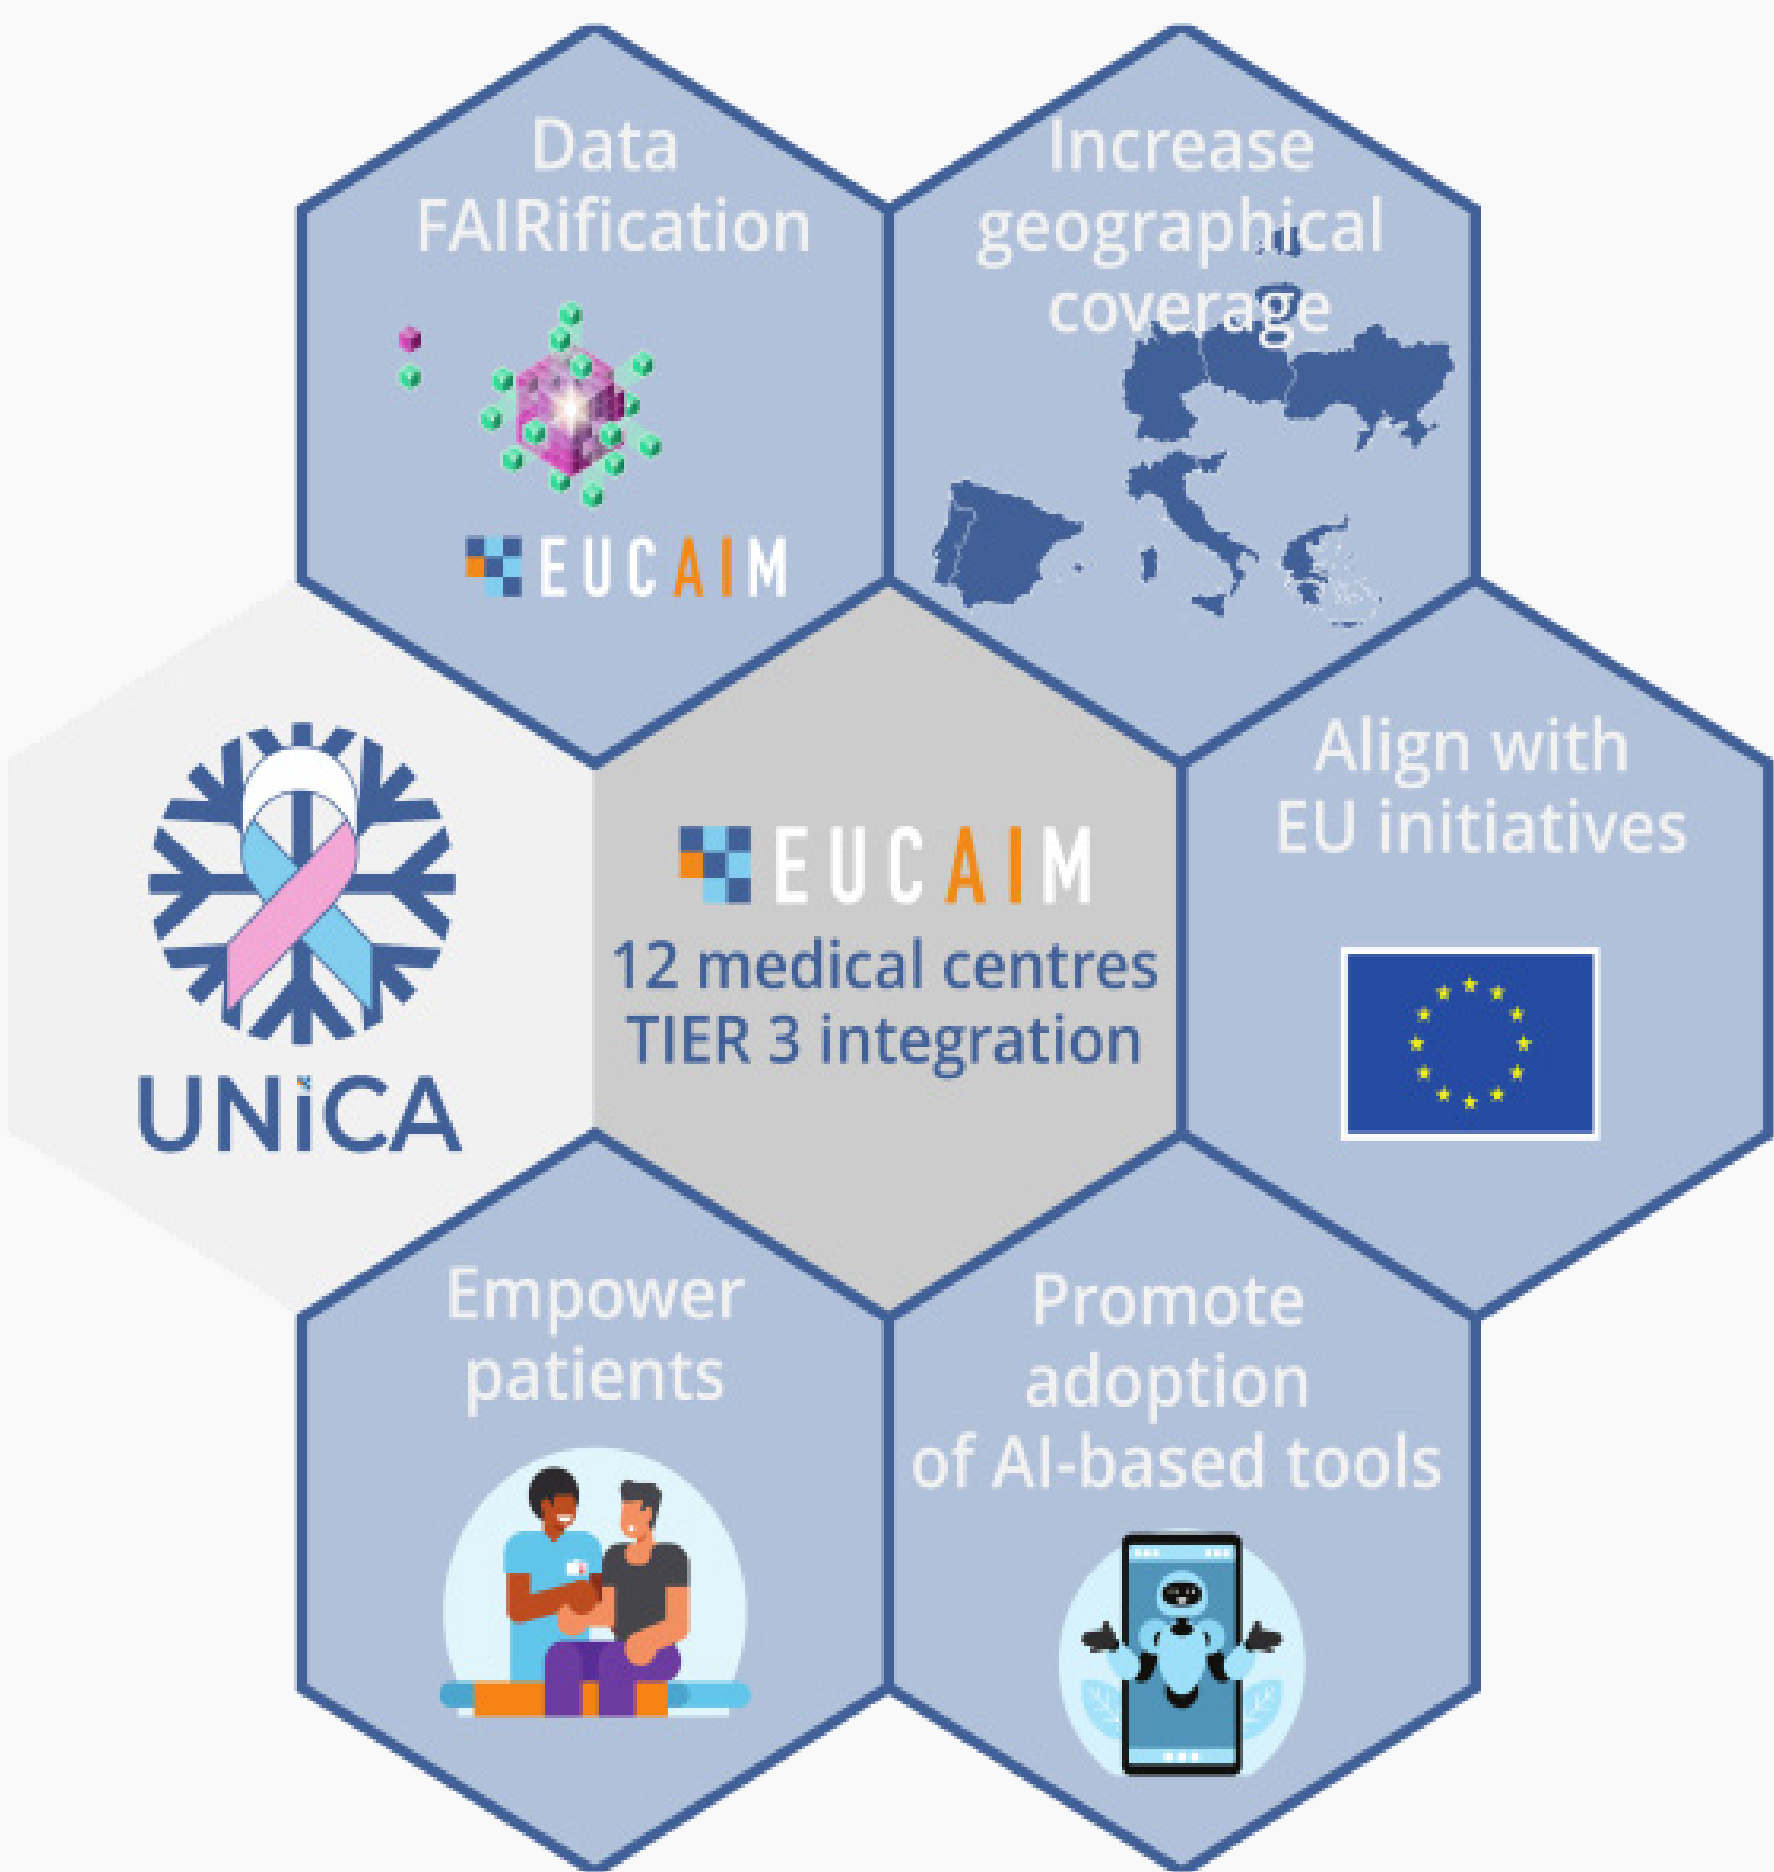

UNiCA connects 12 medical centres with four technology and research partners across nine EU countries and Ukraine.

What we are working on

UNiCA uses federated learning so hospitals can train AI collaboratively without moving patient data, supporting breast, lung and prostate screening and promoting data altruism.

What's the one thing we need next

We need to strengthen our collaboration with organisations that can expand our data network, strengthen public engagement and accelerate the development of foundation models through federated collaboration.

**5 years Mission Cancer:
Stronger Through Connection**
