

Our Living Lab as a Service

Social innovation in real-world settings

At Science For Change, we offer an expert **Living Lab as a Service** solution to transform complex challenges into experimental processes in **real-world settings**. We activate territories and stakeholder ecosystems to co-design, pilot and evaluate solutions using participatory methodologies and citizen science.

We work with replicable models that connect needs, users and data to generate measurable results and social impact. We support you from **defining the challenge** to **validating the solution**, integrating social and environmental sustainability criteria and facilitating scaling up to **European R&D&I programmes**.

You set the challenge. We activate participation
and provide the tools to solve it.

Generate a local innovation ecosystem with European impact!

What do we offer?

- **Living Lab Design and Activation:** We identify and connect key local stakeholders to create open innovation environments and shared agendas focused on specific challenges.
- **Testing and Validation in Real-World Conditions:** We connect your solution, prototype or service with end users to validate usability, social acceptance and feasibility before scaling it up.
- **Impact Assessment:** We measure results and social impact using citizen science methodologies and participatory data collection.
- **Multi-stakeholder Participation:** We activate and support participation through the SFC Community, connecting quadruple-helix stakeholders to ensure diverse, active and sustained involvement.
- **Mentoring and Capacity Building:** We train and support teams in the design of Living Labs, co-creation processes and collaborative research at local level.

We support the scaling up of **initiatives at European level** through Horizon Europe and other research programmes.

Ask for more information about our training plans and services to take that first step towards change.
