

Who we are

MammoScreen is an EU-funded consortium evaluating MammoWave®, a non-ionising breast imaging technology designed to make screening safer, more accessible and woman-friendly.

What we are working on

A 10-centre international clinical study with 8000+ women, alongside health technology assessment and patient engagement to support future adoption.

What's the one thing we need next

We need to strengthen the multicentre network, expand screening-population research and share our HTA approach to support wider medtech adoption.

**5 years Mission Cancer:
Stronger Through Connection**
