

Find out how to turn evidence into recommendations and public policy impact!

Science for Policy

- **Strategic Translation for Policy**

Advocacy: We translate research or social causes into technical recommendations and communication plans designed to influence public decision-makers with shared agendas.

- **Policy Analysis and Stakeholder**

Mapping: We identify key stakeholders in your sector and assess regulatory and legal frameworks to ensure real impact.

- **Policy Design through Participatory and**

Deliberative Processes: We use citizen science to inform the entire public policies cycle, from definition to evaluation, aligning policies with citizens' agendas.

- **Inclusion, Gender and Diversity:** We implement and provide training on inclusive and democratic approaches that strengthen social cohesion, promoting cultural and social diversity.

- **Support and Strategic Alignment:** We scale initiatives from the local to the European level (and vice versa) and align your strategies with international frameworks such as the SDGs, the EU or UNESCO.

In the face of growing institutional mistrust and the polarisation of society, **at SFC we promote and design policies that have a real impact** by actively involving the affected stakeholders.

Ask for more information about our training plans and services to take that first step towards change.
