

# About Beyond Leather Materials

---

Beyond Leather has developed and is producing an alternative material to leather based on apple waste, branded as Leap. Ultimately "Making Waste Beautiful"...

Founded in 2017, we have transformed from an innovative school project into a Danish company. Driven by the idea of utilizing waste rather than creating more, we are on a progressive path to become a leading supplier of the leather alternative, ready to offer a more environmentally preferable material.

## Our mission

*Making waste beautiful* is our driving force, guiding us as we continue to challenge and expand the boundaries within various industries.

Our journey is a shared one as we are committed to align with like-minded craftsmen and companies, forging partnerships with those who also envision the future where every piece of discarded material holds the potential for rebirth and innovation. That's how we partnered up with European juice producers to repurpose 25% of the wasted apples left over from juicing.

Because as we love to say - there's no waste, only untapped resources with unforeseen value.

## Making Waste Beautiful together

By working with Beyond Leather and our Leap material, you're doing much more than purchasing a product. You are investing in a piece of innovation that redefines the ordinary. So welcome on the collective journey where we redefine materials and reinterpret the value of using waste for good together... *saving one wasted apple at a time!*

# What is Leap?

The name says it all... Leap, as leftover apples, is a next-gen leather alternative born from the idea of Making Waste Beautiful.

We created Leap as a testament to what can be achieved when we re-evaluate the value of unwanted waste and use it to create a material that is not only functional but also beautiful.

By working with Leap you are doing much more than purchasing a material. You are investing in a piece of innovation that redefines the ordinary.

## What makes Leap so special?

- A 91% biobased composition
- Partly made from leftover European apple waste transformed into a versatile leather alternative with a premium performance.
- Available in 1.5m wide rolls, textured and colored in many variations.
- Its premium character suits multiple industries, ranging from small leather goods to furniture and home decor, and will soon be ready for automotive interiors.
- Besides its aesthetic appeal and premium performance, Leap is highly resistant to water and fire.

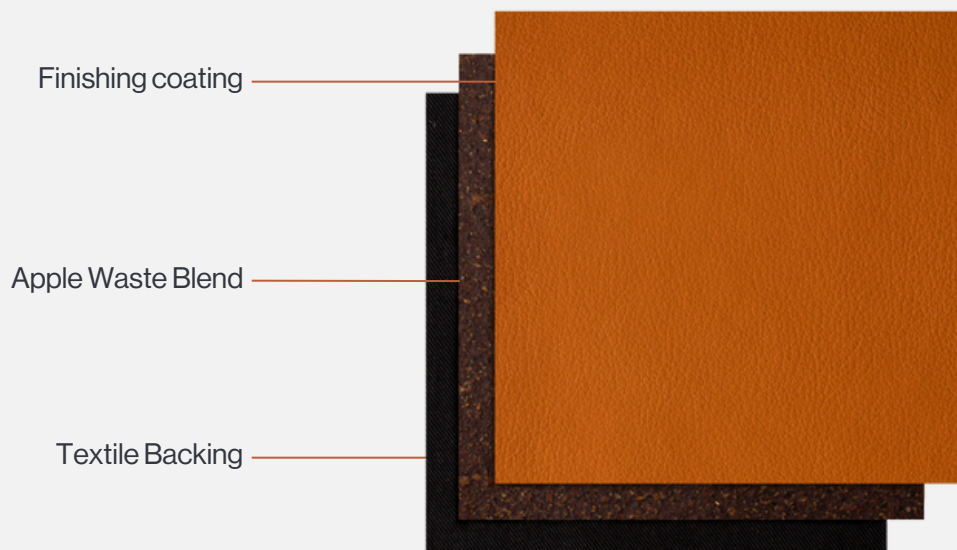

## How is Leap made?

The core of Leap is made from the leftover apple waste blend.

Enhanced with a Tencel textile backing and coated with a water-based, partially bio-based PU coating layer to support the durability.

Everything inside Leap is there for a reason, and we're not holding anything back. We stay authentic to our raw material by refusing to add anything that's not necessary, saying no to animal products or toxic chemicals.

## Discover the benefits

**1.8 kg**

of upcycled apple waste used to produce 1m<sup>2</sup> of Leap

**91%**

USDA certified biobased content

vegan-certified next-gen material

Production based in Denmark & Germany, closest to our hub

Produced on 1.5m wide rolls = less waste

European apple waste source
