With Picksure systems, we are here to guide and support you throughout your journey to achieve your goals.

Picksure is a lean manufacturing product that identifies and eliminates the seven main types of waste:

You can avoid overproduction: By accurately forecasting customer demand, you avoid unnecessary stockpiling.

Reduce waiting times: By optimising the production flow, it minimises waiting times and ensures efficient use of resources.

Reduce transportation costs: By optimising the flow of materials, you eliminate unnecessary transportation.

Identify and eliminate waste: By analysing production processes, you can identify and eliminate steps that do not add value to the product.

Control inventory levels: By optimising your inventory, you can eliminate unnecessary inventory costs.

Improve employee movement: Increase worker productivity with ergonomic workstations and process optimisation.

Reduce scrap rates: Minimise the creation of defective products by strengthening quality control processes.

Picksure systems provides a comprehensive range of solutions to implement lean manufacturing principles.

- The objective of your assembly process is to achieve perfection at every stage, eliminating the possibility of error through the use of a poka-yoke approach.
- Maximise your productivity by ensuring consistent reliability across your diverse product range.
- Your new team members will be up to speed quickly and be able to quickly adapt to your production process.

This product can be used in conjunction with our other mobile devices.

Picksure provides a comprehensive solution for collecting and analysing data from your production processes. This includes the integration of real-time monitoring and control systems and intelligent manufacturing execution systems (MES).

For a more sustainable future

- **Paperless working environment:** Reduce paper consumption to zero by digitising instructions and records, saving forests and reducing waste.
- **Eliminate material waste:** Minimise material waste and use resources more efficiently with the Kanban system and real-time inventory tracking.
- **Energy efficiency:** Reduce your carbon footprint by reducing energy consumption with intelligent lighting systems and equipment optimisation.
- **Employee safety:** Ergonomic design and clear instructions protect employee health and prevent workplace accidents.
- **Sustainability reporting:** Detailed reporting allows you to measure your environmental performance and ensure continuous improvement to meet your sustainability goals.
