COLD WILL

DEFENCE AND SECURITY
TECHNOLOGY NETWORK

FIND CAPABILITY. BUILD PARTNERSHIPS. MOVE FASTER.

Cold Will is a defence and security technology network built to move innovation faster towards trusted, deployable capability.

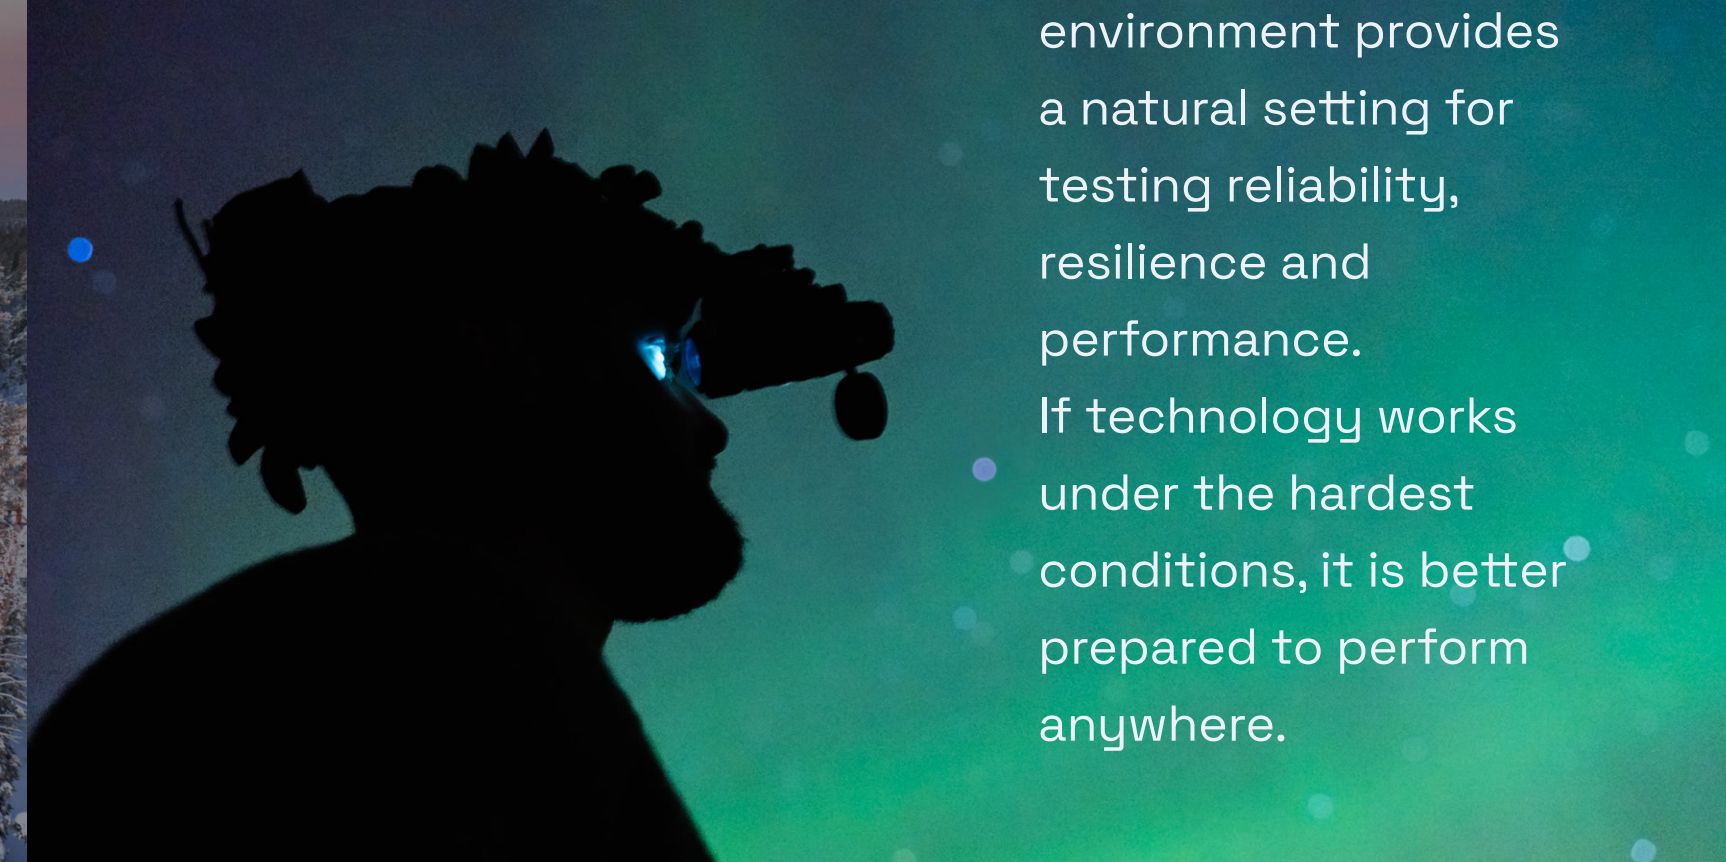

It connects companies, researchers, public actors, test environments and international partners across the full path from technology to real-world use.

CAPABILITY

Cold Will connects research, technology, testing, validation and operational learning into one continuous cycle – helping solutions mature faster and respond to real mission needs.

VALIDATION

Finland's northern environment provides a natural setting for testing reliability, resilience and performance. If technology works under the hardest conditions, it is better prepared to perform anywhere.

GLOBAL REACH

Cold Will links Nordic technology and expertise with operational learning from Ukraine, EU and NATO pathways in Europe, and strategic partnerships and growth opportunities in North America.

COLLABORATION

The network makes it easier to find relevant expertise, trusted partners, test environments and international opportunities – creating faster routes to co-development, procurement, funding and market access.
