

Cornova

Integrated Corn Biorefinery Platform

Industrial Value Creation from Agricultural Raw Materials

From raw commodities → to value-added production

PROBLEM

- ✓ Ukraine exports corn mainly as a raw commodity
- ✓ Significant value is lost outside the country
- ✓ Dependence on imported fuel and protein feed remains high

SOLUTION

- ✓ Development of a corn deep-processing facility
- ✓ Production of bioethanol and high-protein feed
- ✓ Creation of industrial co-products (CO₂, corn germ, fuel blends)
- ✓ Transition from raw export to industrial value chains

SYSTEM MODEL

WHAT WE BUILD

- Industrial corn processing facility
- Integration with existing agricultural production
- Multi-product flexible processing system
- Platform for scaling value-added production

IMPACT

- Industrialization of agriculture
- Strengthening energy independence
- Development of protein feed production
- Increased export value of finished products
- Job creation in rural regions

COOPERATION FOCUS

- Technology partners (processing, bioethanol)
- Industrial and engineering partners
- EU cooperation and development programs
- Strategic investment partnerships
