SADC member states
in the opportunity zone

Africa's energy gap is real, and it's holding back people and industries alike. Henko Energy is building the infrastructure to close it — fast, clean, and at scale.

THE PROBLEM WE'RE SOLVING

**Factories idle. Hospitals on generators.
Growth plans stalled by a grid that can't keep up.**

Across Southern Africa, unreliable power isn't just an inconvenience — it's a hard constraint on economic potential. Industrial facilities lose productive hours every day. Investors price in the risk. Communities bear the cost. **A new infrastructure layer is needed, and it needs to be deployable now.**

WHAT WE'RE BUILDING

Modular Gas-to-Power Hubs

We're not building mega-projects.
We're building right-sized energy hubs
that deploy where demand exists —
LNG or pipeline gas in, reliable
electricity out.

Industrial-Grade Off-take

Every hub is anchored by offtake
agreements with manufacturers,
miners, and logistics operators. The
demand is real before a single bolt is
turned.

Hybrid & Carbon-Ready

Our modular design integrates
renewable top-up from day one and is
structured to unlock verified carbon
credit revenue alongside energy sales.

WHY GAS-TO-POWER, WHY NOW

3×

faster to deploy than coal

60%

lower emissions vs coal

Scalable

from 10MW to 100MW+

Bankable

strong offtake = lender confidence

THE INVESTMENT OPPORTUNITY

We're building this with the right partners, not the most partners.
We're looking for people who understand infrastructure, believe in
Africa's industrial trajectory, and want to be part of something that
genuinely moves the needle.

EPC Contractors

LNG Suppliers

Equity Investors

IPPs

DFIs

Tech Providers

Let's talk about what's possible.

Open for site-specific engagement, co-development agreements, and structured partnerships across SADC corridors.
