

ATM SYSTEM TEST TOOL

The only tool for automated regression testing of
Integrated air traffic control and management systems

PROBLEM

Manual testing and fixing newer ATM systems is extremely time consuming and “neverending” task, as the correct operation of the functions must be examined for as many procedures and conditions as possible.

KEY BENEFITS

- **Reduced time of test cycles**
(from weeks to hours)
- **Increased number of tests**
(from hundreds to thousands)
- **Early problem detection**
- **Increased flight safety**

SOLUTION

Deploy a true automated test platform with flight industry specific extensions that ensures the most valuable human experts can incorporate their knowledge into an ever-expanding automated test suite without programming knowledge, enables the users to run ready-made tests at any time required without human intervention, and detects errors fully automatically.

KEY CAPABILITIES

- **Control and evaluate** all channels of ATM systems
(GUI, Radar, messaging...)
- **Build** any simple or complex flight specific automated test scenario
- **Formalize, transfer and share** your testing knowledge
