

Paper Bubble

Use and application

Bubble wrap, composed of two sheets of paper enclosing air bubbles, is ideal for **maximum shock absorption**, ensuring the **preservation of the most fragile products**. With its flexibility and lightness comparable to that of standard bubble plastic, it constitutes the ideal ecological choice for effectively **wrapping, cushioning**, and **protecting** various types of products during transport or packaging.

Technical data

Material: recycled paper of European origin

Roll: up to 250 mL x 50 to 100 cm wide

Sheets: starting from 10x10 cm

Packaging: rolls or sheets

Grammage: 2 x 50 g/m²

QMC: from one pallet
