Fixed Wing LiDAR Processing

Our LiDAR processing team routinely process and deliver very large DTM and landcover classification datasets:

- Processing of any medium and large-format camera images

- High-resolution LiDAR editing up to 20 points/m²

Applications

- Geotechnical assessment

- Flood risk assessment

- Route planning and asset location surveys

- Forest inventory and habitat mapping

Benefits

- Rapid processing of customer datasets

- Processing capacity to produce large areas rapidly

- Generation of multiple LiDAR products

- DTM and ground feature extraction
