

Decarbonization Toolkit

Phase out from fossil fuel, now!

If you are

An industrial company **willing to integrate energy transition** solutions into your assets and strategies

What you get

- Tailored decarbonisation master plan
- CAPEX and OPEX quantification
- Basic design of net-zero solutions
- Identification of suppliers and partners

A practical method to evaluate the applicability of multiple solutions to your process, identify the best available products on the market and define an effective and successful decarbonization plan.

1

Plant Analysis

Analysis of as-is situation gathering available data (Audits, inventory of utilities, plant layouts, meters data)

Setting of CO2 reduction targets on Scope 1 and Scope 2

2

CO₂ Reduction Potential

Simulation of different decarbonization options

Selection of the best decarbonization configuration

Technology selection and business plan

3

Implementation Roadmap

Definition of Decarbonization roadmap

Identification of potential partners/suppliers

Identification of required plant modifications
