The market potential

Gateway to 750 million customers in the heart of Europe

Austria – the heavily industrialised nation

One of the EU's most prosperous member states – High purchasing power

Did you know?

Austria features the highest density of hidden champions – the successful small and medium-sized enterprises occupying the pole position in their markets and market niches. Most of these firms are family owned.

The proof

Rosenbauer is such an example. Founded in Linz in 1886 as a trading house for firefighting products, the company now manufactures vehicles which can be operated via radio remote control and communicate with each other digitally. The world market leader in firefighting equipment sets new standards when it comes to ergonomics, digitalisation and ecology as shown by its development of the world's first electric-powered firefighting vehicle.

Austria is seen in the EU as the unrivalled specialist for Eastern Europe and historical East-West business hub. Companies from all over the world which are eager to expand can leverage optimal conditions here. Historical ties, a matured cultural understanding and similar mentalities converge in the coffee house to discuss the next business steps over a cup of Wiener Melange.

As a nation with high purchasing power, Austria is a test market for German-speaking Europe and also serves as a springboard to Central and Eastern Europe thanks to its Eastern European language skills. Conversely, CEE companies like to launch their expansion to the West with us.

| | |
|-------------|--|
| 100,000,000 | people live in the German-speaking markets (Germany, Switzerland, South Tyrol, Liechtenstein, Austria) |
| 450,000,000 | inhabitants are in the EU |
| 750,000,000 | people live in geographical Europe extending to the Urals |
| 3 | hours flight time at most to every European capital city |

| | |
|-----|--|
| 25% | of all Austrians have a migration background, of whom 65% are from Eastern Europe, including a disproportionately high number of university graduates. |
| 40% | of Vienna's inhabitants speak an Eastern European language, most growing up bilingually. |

Austria – the land of industry

Taking a holiday trip comes to mind for many people who hear the word "Austria". However, Austria is first and foremost a land of industry, which accounts for 29% of the country's GDP compared to 15% generated by tourism.

Mechanical engineering, gas and heat supply, electrical and vehicle industry, chemical products and the food industry comprise the leading sectors in Austria. Many companies in these business areas are among the top global players or are even world market leaders, such as Rosenbauer, Miba, Lenzing and Red Bull.

Top 6 industries in Austria

| | |
|------------------------|-------|
| Gas and heat supply | 24,1% |
| Mechanical engineering | 19,6% |
| Electronics | 9,6% |
| Chemistry | 8,1% |
| Vehicles | 6,8% |
| Food | 5,1% |

Did you know this?

Austria is among the biggest foreign investors in Southeast and Eastern Europe. The advantage for you: Austrian service providers such as lawyers and tax consultants are CEE specialists, employees speak local languages and are familiar with local customs and practices.

The proof

412 global companies have established their headquarters in Austria and take advantage of the perfect strategic location in the centre of Europe and the business-friendly conditions as well to push their activities.

ABA simply gets it done.

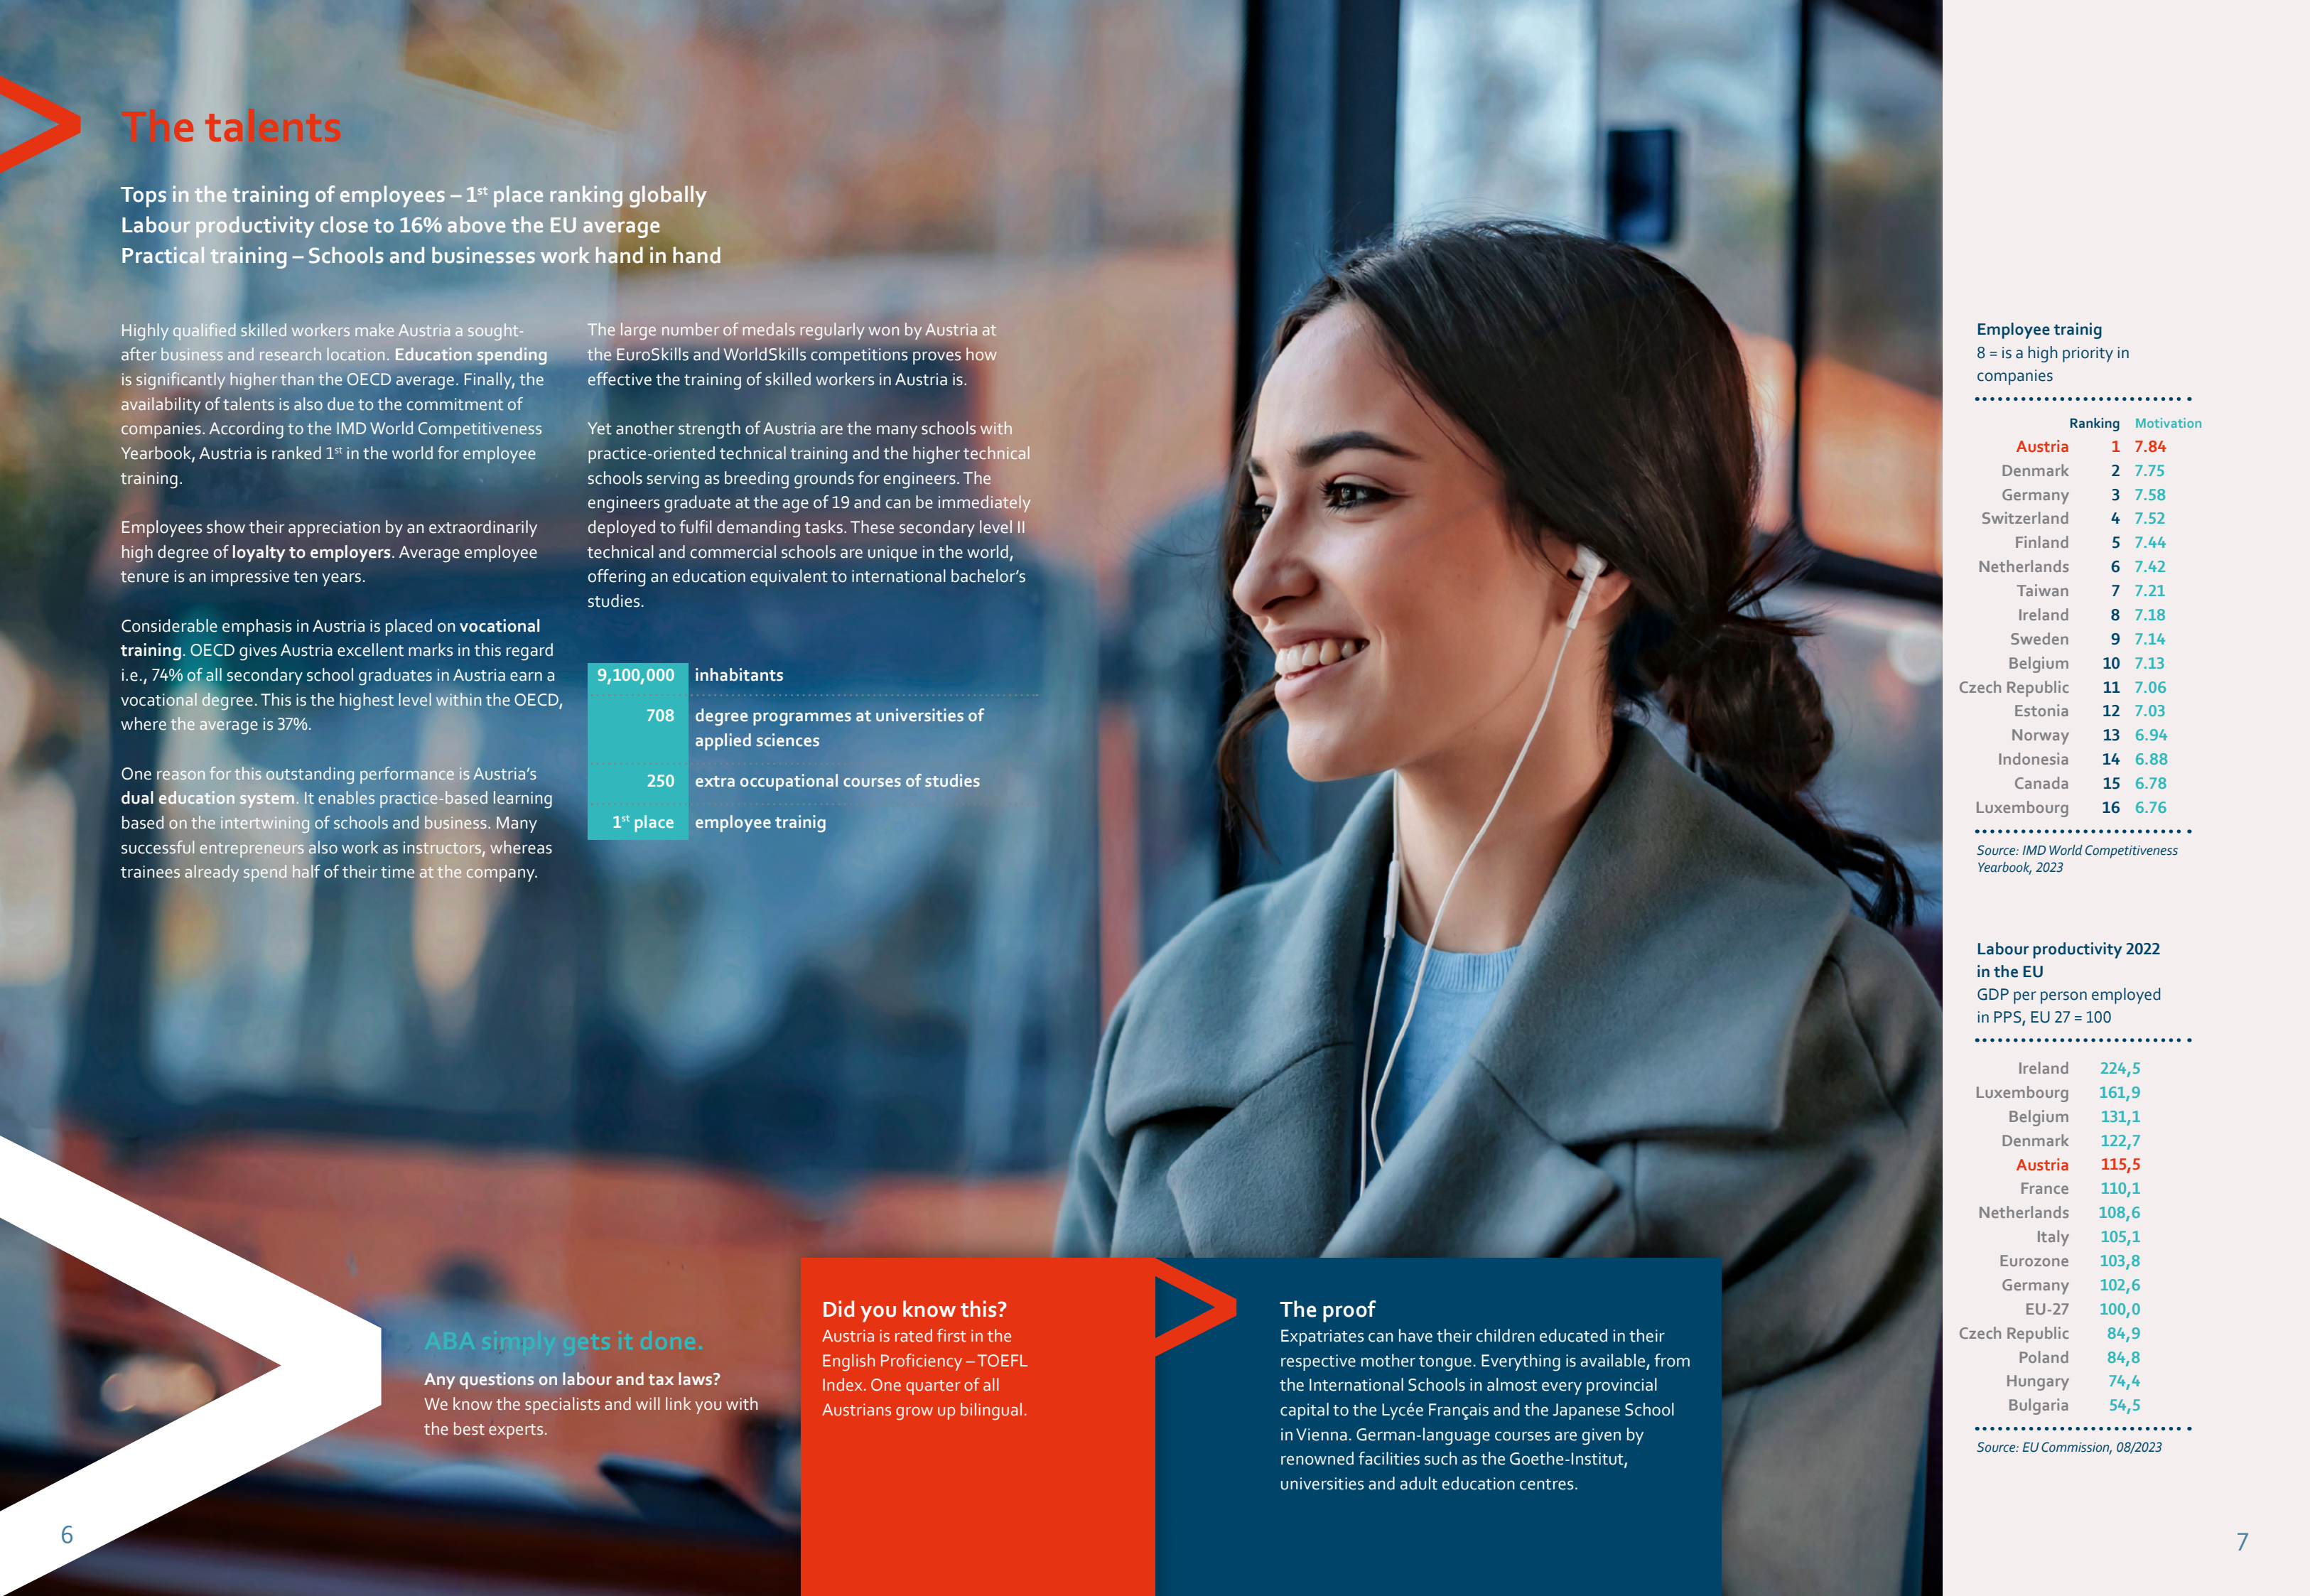

Families of your expats also want to settle down in Austria?

We provide help in finding jobs and schools.

ABA simply gets it done.

Want to know more about your sector in Austria?

We will provide the relevant facts and figures.

The talents

Tops in the training of employees – 1st place ranking globally
Labour productivity close to 16% above the EU average
Practical training – Schools and businesses work hand in hand

Highly qualified skilled workers make Austria a sought-after business and research location. **Education spending** is significantly higher than the OECD average. Finally, the availability of talents is also due to the commitment of companies. According to the IMD World Competitiveness Yearbook, Austria is ranked 1st in the world for employee training.

Employees show their appreciation by an extraordinarily high degree of **loyalty to employers**. Average employee tenure is an impressive ten years.

Considerable emphasis in Austria is placed on **vocational training**. OECD gives Austria excellent marks in this regard i.e., 74% of all secondary school graduates in Austria earn a vocational degree. This is the highest level within the OECD, where the average is 37%.

One reason for this outstanding performance is Austria's **dual education system**. It enables practice-based learning based on the intertwining of schools and business. Many successful entrepreneurs also work as instructors, whereas trainees already spend half of their time at the company.

The large number of medals regularly won by Austria at the EuroSkills and WorldSkills competitions proves how effective the training of skilled workers in Austria is.

Yet another strength of Austria are the many schools with practice-oriented technical training and the higher technical schools serving as breeding grounds for engineers. The engineers graduate at the age of 19 and can be immediately deployed to fulfil demanding tasks. These secondary level II technical and commercial schools are unique in the world, offering an education equivalent to international bachelor's studies.

The land of research

First-class universities and research centres
14% research premium and direct research funding
Innovative companies, startups and scaleups

An innovative spirit, ingenuity and a dynamic research landscape are what characterise the Austrian research location.

| | |
|----------------|--|
| 15,500,000,000 | € in R&D expenditures in Austria in 2022 |
| 1,180,000,000 | € in research premium were applied for |
| 3,2% | R&D ratio |
| # 3 | research ratio in the EU |

Active research community
83,659 researchers currently work in Austria, 70% in companies and approx. 23% in higher education – a sector the country can be proud of. Austria features 22 public and 17 private universities as well as 21 universities of applied sciences offering more than 3,600 study programmes. More than 390,000 students are currently completing their education at these institutions.

14% research premium

Small country, big research premium
As a small country, Austria sets priorities reflecting its strengths as a business location. Since the turn of the century, these have included great inventiveness and a focus on smart market niches and sector – complemented by very highly educated people and the right system of incentives. As a result, the Alpine Republic succeeds in luring exciting SMEs, startups and research-intensive multinationals year after year. According to the World Bank, Austria ranks third globally for its research and development expenditures, featuring a R&D to GDP ratio of 3.2% - surpassed only by Sweden and Belgium.

The unbeatable advantage
Austria combines direct and indirect funding, with unique results in Europe. Companies apply for direct funding via the General Programme of the Austrian Research Promotion Agency (FFG). Moreover, they receive a cash bonus quickly and unbureaucratically as reimbursement for 14% of their entire research expenditures, regardless of their size, sector or corporate structure. The research premium is for both in-house R&D as well as contract research, encompassing staff costs, R&D investments, finance costs and operating costs. The best thing about it is that there is no maximum limit.

- What is funded?**
- Application-driven research and development
 - Basic research
 - Environmental protection investments
 - Special programmes, also for SMEs and startups
 - 30% tax allowance (up to five years) for foreign scientists/researchers on income from scientific work
 - Plus: regional funding for innovative investments

| Research Champions | |

“At the Villach plant we fuse innovative, high-performance manufacturing including research and development with global business responsibility in the field of power electronics. As a company, we highly value the research funding model in Austria alongside the very good collaboration with partners and networks and a well- developed landscape of ‘talent factories’ from the higher technical colleges to universities and universities of applied sciences.”

Sabine Herlitschka
CEO Infineon Technologies Austria AG

High-tech in the Alpine Republic

Is Microsoft investing € 1 billion in a cloud data centre in Austria? Does Magna Steyr in Graz have a preliminary agreement with the California-based automobile producer Fisker to manufacture a battery-powered electric luxury SUV? Welcome to Austria, where innovative companies are sending out clear signs of life to the world.

Research centres

International experts and top scientists come together in Austria. In addition to the strong research community in the higher education sector, non-university research institutes in this country enjoy a worldwide reputation.

Microtechnology for mega-progress

ZKW, Evatec, TDK Electronics and the EV Group conduct research on the “micromirror” technology at Silicon Austrian Labs. It is the pre-requisite for optical distance measurement and head-up display for autonomous driving. Microelectronics and nanoelectronics are being developed across different sites in Linz, Graz and Villach as the basis for smart product and process solutions focusing on Industry 4.0, IoT and smart energy.

Interface of science and industry

As an Ingenious Partner of business and public institutions, the Austrian Institute of Technology (AIT) researches and develops today the technologies, methods and tools of tomorrow and beyond. With some 1,400 employees, AIT is Austria's largest non-university research facility and holds a leading position in Europe on key infrastructure issues.

Quantum computing

Little Austria ranks among the big players when it comes to international quantum research. Led by Anton Zeilinger, ground-breaking alliances are arising in the Austrian Academy of Sciences between industry and science.

University of Innsbruck

Small but powerful: the new prototype quantum computer at the University of Innsbruck fits into just two 19-inch server racks despite an impressive computing power of 24 qubits. This speed increase facilitates the development of new medicines, amongst other applications.

Alpine Quantum Technologies

A spin-off of the University of Innsbruck succeeded in developing a quantum computer for industrial standards with minimal maintenance costs and low electricity consumption. Alpine Quantum Technologies combines its high-performance hardware with Google's programming framework Cirq, making it the first to bring a quantum computer to the cloud.

Lively startup scene

An exciting startup scene has emerged in Austria for some time now on the basis of a flourishing old economy. In particular, success has been achieved in the fields of cryptocurrencies and financial services, ICT, health, education and sports.

Using AI to combat migraines

The neurotech startup Brightmind.AI is pursuing the objective of launching a so-called Non-Invasive Brain Simulation (NIBS) solution on the marketplace as a wearable for everyday use. Migraine patients should wear a therapy headset for a short period of time each day and thus be able to reduce the number of migraine attacks by at least 50%. Brightmind.AI decided to set up business operations in Austria although the startup's target market is the USA, the founders' roots are in Germany and its partner company is in the UK. The underlying reasons are the tangible research benefits, quick opportunities for networking and short distances, a strong talent pool as well as comprehensive support by public bodies such as ABA and the federal promotional bank aws.

Electric charging stations? has.to.be!

Europe ranks among the fastest growing e-mobility markets, and a startup in Salzburg is playing a decisive role. has.to.be is the leading full-service provider for e-mobility, manages more than 40,000 directly connected charging points and 250,000 additional charging stations in 45 countries via roaming agreements. The huge potential of this software developer has also stirred up extensive interest globally. The American charging station operator ChargePoint acquired the company for € 250 million, making it the biggest startup exit in Austria up until now.

ABA simply gets it done.

Are you trying to get an overview of investment promotion in Austria?

We will filter out what is right for you.

Did you know this?

International companies benefit from the Austrian business location – and vice versa. They comprise 2% of all companies and create 18% of all jobs and even 40% in the field of R&D. More than half of R&D expenditures are attributable to international firms and generate almost a third of the production value.

The proof

Infineon Technologies Austria AG has long operated an important competence centre for power semiconductors in Villach. In September 2021, it opened a high-tech chip plant with an investment volume of € 1.6 billion, making it the largest European investment project in the field of microelectronics.

ABA simply gets it done.

Searching for cooperation and research partners?

We will bring you together with companies and research institutions.

The economic climate

Business-friendly tax system and extensive incentive portfolio
High-performance infrastructure and modern eGovernment
Stability and security – hardly any strikes, low crime rate

Business-friendly tax system

Internationally operating companies are pleased with Austria's tax advantages. For example, the attractive group taxation system for holdings serves as a role model throughout Europe. Companies are subject to a corporate tax rate of 23% and nothing else – neither a wealth tax nor a trade tax.

Legal certainty and payment behaviour

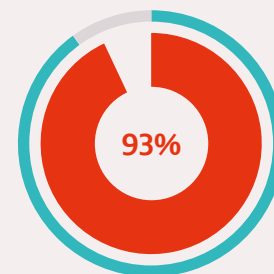

A functioning democracy based on the rule of law is a major asset if things do not go smoothly. Austria is rated sixth in an EU comparison for the time required for courts to make decisions on cases under civil and commercial law. Payment behaviour in Austria is also good, with corporate customers paying their outstanding invoices in 2023 within 26 days on average.

Digital is ingenious

Regardless of whether the issue is a tax refund, safety information or legal advice, citizens and entrepreneurs in Austria handle official matters online. It is even possible to set up a limited liability company via the Internet. Austria was the European trailblazer in this regard. A video conference replaces an appointment with a notary public and the electronic signature is used instead of a handwritten one.

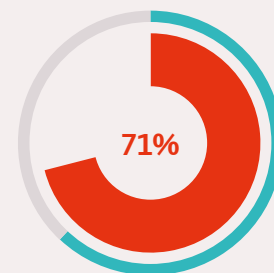

The "eGovernment Benchmark 2023" of the EU shows that Austria is among the very best when it comes to online public services. The study compares digital administration services in 35 European countries (27 EU countries and Iceland, Montenegro, Norway, Switzerland, Serbia, Turkey as well as North Macedonia and Albania). Austria is particularly well positioned, with 93% of the highest possible rating in the top-level benchmark of user centricity and 71% for the benchmark of transparency of digital services.

ABA simply gets it done.

Aim to implement your business idea in Austria?

We will guide you through the startup process – step by step.

Did you know this?

Austria is a top-level benchmark for user centricity, featuring a score of 93%. This significantly simplifies people's lives. Public authorities and the tax office communicate digitally.

The proof

Austrian eGovernment solutions such as the Business Service Portal usp.gv.at and the "Digitales Amt" App are cited as internationally significant good practices for all of Europe.

// We are impressed by the level of digitalisation in the Austrian public administration. This was very helpful in our setting up business operations, especially in times of the coronavirus. The quick and comparatively unbureaucratic access to Austrian funding programmes is a major advantage of the business location. Last but not least, we value being able to draw upon highly-qualified employees and thank ABA for its good support. //

Rainer M. Richter
CEO and Co-Founder, IoT Inspector GmbH

“The enormous level of innovativeness, the high quality of life and the perfect geographical location make Austria the ideal place for InterXion to be economically successful. For this reason, we have been continuously expanding our data centre campus for more than 20 years. In the meantime, it is not only the best connected one in Central and Eastern Europe but is also seen as one of the largest network nodes in the entire CEE region. In this way, we enable data-driven innovation on the part of national and international companies and thus strengthen the economic resilience of our customers.”

Martin Madlo
Managing Director, Interxion Österreich

ABA simply gets it done.

Looking for the right site in Austria?
We will find a suitable place to live and work.

Did you know this?

The Vienna Internet eXchange (VIX) is an Internet node in Vienna and interface for Eastern Europe. The very high availability and reliability of the electricity supply as well as the high data security standards make Austria an ideal location for supplying customers throughout Europe.

The stability

Stability has many facets – and every single one is of unlimited value from a business perspective. Austria offers them in every respect. Internationally active companies benefit from the low strike rate and moderate wage policies.

The protection of persons and property is at a higher level in Austria than just about every country in the world. It is possible to use public transport late in the evening or take a stroll around town after going to the theatre without there being any need to worry.

Reliability and predictability

The supply of electricity and energy in Austria is guaranteed. The expansion of the fibre optic network and the 5G network is well advanced and exceptionally good.

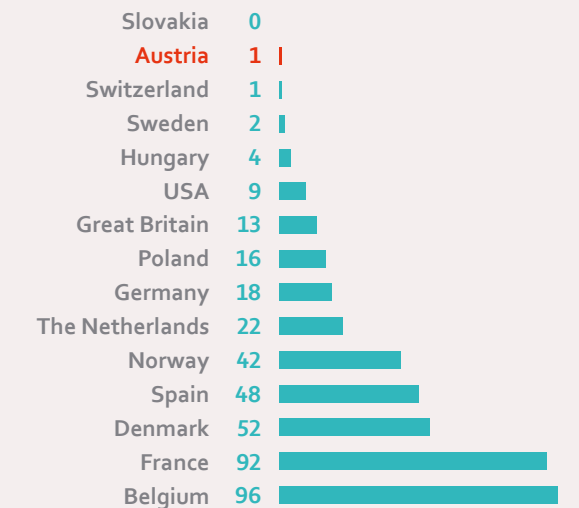

Renewable energies account for 76,2% of overall electricity production in Austria compared to only 37,5% on average in the EU. This is based on natural resources, primarily hydropower but also wind energy, photovoltaics and geothermal energy, as well as a national referendum against atomic power in the 1970s. The Renewable Energy Expansion Act 2021 is considered to be one of the main cornerstones of the energy transition and has one major objective, namely 100% green electricity by 2030. In order to achieve this, € 1 billion will be invested annually in increasing renewable energy capacities.

The proof

International data centre providers such as Atos, NTT, IBM, InterXion and T-Systems have already located in Austria or are expanding here. Microsoft has also decided in favour of an Austria site. Such facilities are characterised by direct access to cooling water or close proximity to power plants or transformer stations with competitive energy prices. In this way, data centres can optimally use electricity and data networks, minimise costs and generate excellent Power Usage Effectiveness (PUE) values. Moreover, Austria is a pioneer when it comes to green data centres. At the customer's request, they can also be operated on electricity from 100% renewable sources.

The quality of life

Austria – the country with the highest quality of life in the EU
Favourable cost of living, unmatched public transport
Cultural and culinary heights – and genuine mountaintops

After Switzerland, Austria is the most livable country in the world. An intact environment, green meadows and pastures, clear waters, good air quality combined with a diverse sports and cultural offering. All this is complemented by a high level of personal security, first-class health care, a well-developed infrastructure, high quality housing and multifaceted learning opportunities. The outstanding quality of life attracts managers, investors and students from all over the world, also because of Vienna's gratifyingly affordable living costs in relation to the quality of life. This is shown by Mercer's rankings of cities across the globe in the "Cost of Living Survey" and the "Quality of Living Survey".

Quality of life

Highest achievable score 10

| | Ranking | | |
|----------------|---------|------|--|
| Switzerland | 1 | 9.64 | |
| Austria | 2 | 9.60 | |
| Denmark | 3 | 9.53 | |

| Hungary | 53 | 4.80 | |

Source: World Competitiveness Yearbook, 2023

The New Year's Concert of the Vienna Philharmonic Orchestra, the Opera Ball and the Salzburg Festival have attained cult status across the globe. However, there is a rich cultural offering above and beyond these annual highlights. There is something to suit everyone's taste, whether opera (operetta), musical, theatre, concert, exhibition, poetry slam or dance festival.

Speaking of taste: naturally, good food is part and parcel of the excellent quality of life. Culinary delicacies can be found en masse in Austrian cooking. How about a Wiener Schnitzel if you are really hungry or a Sachertorte cake to go with a Viennese coffee (melange)? By the way, you can also enjoy it all in a vegan version.

And now, from the cultural and culinary heights to the real mountain peaks: Austria has 3,325 mountains and thus does justice to its reputation as the Land of Mountains. It comes as no surprise that skiing, hiking and cycling are among the most popular sports.

| | |
|--------|----------------------------------|
| 83,879 | km² is the total area of Austria |
| 22,000 | km of ski slopes |
| 50,000 | km of hiking trails |
| 10,000 | km of bicycle paths |
| 3,225 | mountains |

“ Located in the heart of Europe, Austria offers an optimal basis for our internationally oriented business activities. The funding landscape as well as institutional support from organisations such as ABA have proven to be a real USP for the business location. More and more skilled workers are moving to Austria due to the high standard of living, which has helped us to recruit highly qualified employees for our company. ”

John Shen
Managing Director, Xencio GmbH

ABA simply gets it done.

Any questions on Austria as a business location?

We will advise you, from A in "Aufenthaltskarte" (residence permit) to Z in "Zuwanderung" (immigration).

Did you know this?

You can use public transport in Vienna as much as you want for € 365 annually. The annual pass for all of Austria costs € 1,095. No wonder that people travel twice as many kilometres here each year by train, tram and underground than the EU average.

The proof

Public transport in Austria is very well developed. You can take the underground in Vienna to go rowing or swimming in the Old Danube or take the bus in Innsbruck to the ski slopes, both within 20 minutes of the city centres. The same goes for other provincial capitals. The nearby recreation areas are really nearby.

Austrian Business Agency – Welcome!
