

Welcome to Muta

June 2025

At Muta, we envision a world where **waste is no longer wasted**, where every material is transformed into a valuable resource that fuels a sustainable future for humanity. We call this vision Mutaworld: **a place where technology, innovation, and collaboration converge to unlock the full potential of the circular economy.**

Our network is redefining recycling by implementing cutting-edge software that increases recovery rates, optimizes operations, and ensures full traceability of materials. With Muta, **sustainability isn't just an aspiration, it's a measurable, scalable reality.**

Together, let's drive meaningful impact and shape a world where every resource finds its way back into the cycle, creating value for businesses, communities, and the planet.

About MUTA

Our Purpose

MUTA was born from the urgent need to **rethink how industries manage resources.**

We identified the gap between sustainability goals and real-world implementation, and we set out to bridge it through **innovative technology**. Our mission is to connect the entire industry and create a robust network, making operations more efficient, sustainable, and scalable.

What we do

MUTA is a pioneering SaaS company focused on revolutionizing the recycling and renewable feedstock industries through **digital innovation and data-driven solutions.**

We build technology that empowers recycling companies to:

Digitize the full collection flow.

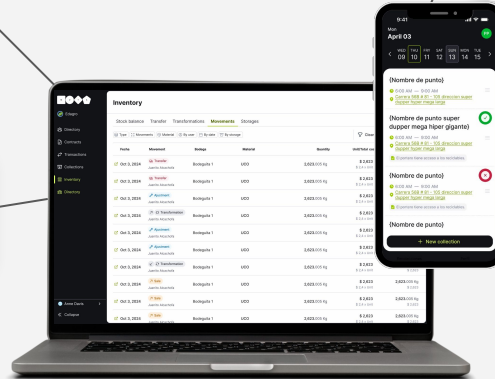

Boost operational efficiency.

Ensure regulatory compliance.

Achieve sustainability goals effortlessly with full traceability.

Industry Challenges

How we deliver value

Key Challenges

-  **Too much time spent on spreadsheets**, combining data from different sources.
-  **ISCC and other certifications take too long** because information is scattered everywhere.
-  **Inventory is not updated in real-time** with data from customers.
-  **Traceability is handled through emails, WhatsApp, and other disconnected channels.**
-  **Documents are stored in multiple places**, making it hard to find what you need.
-  **A lot of data is managed manually**, leading to errors in inventory, document submission, and origin points.
-  **Tracking origin points is confusing and difficult to manage.**

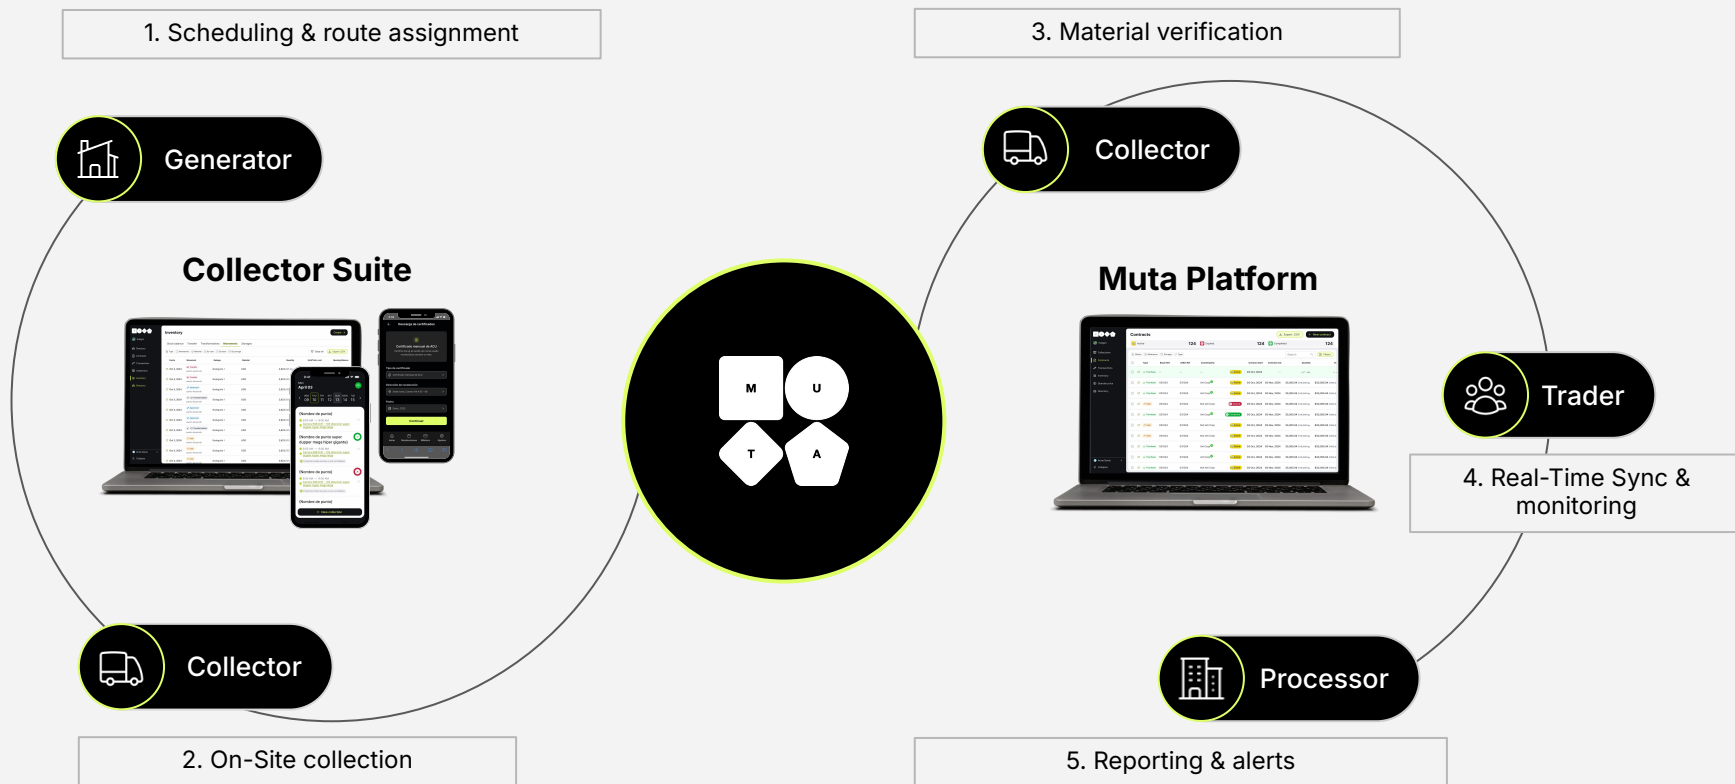

With MUTA

-  **Optimize processes** and reduce operational inefficiencies.
-  **Promote transparency** across the entire supply chain.
-  **Address the challenges** of fragmented systems and outdated practices.
-  **Enable stakeholders to manage complex operations** seamlessly and efficiently.

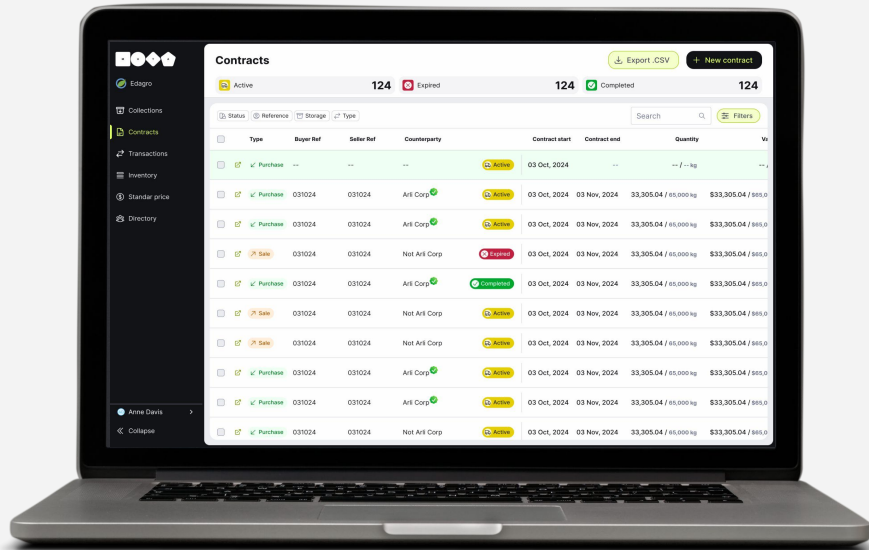

Welcome to Muta platform

Muta platform

Muta Platform

All-in-one platform: Manage purchases, sales, inventory, and material transformations all in one place.

Real-Time Data:

Stay updated on inventory, pricing, and order status.

Automated Data

Management:

Capture, map, and protect data automatically across the trading material lifecycle.

Enhanced Efficiency:

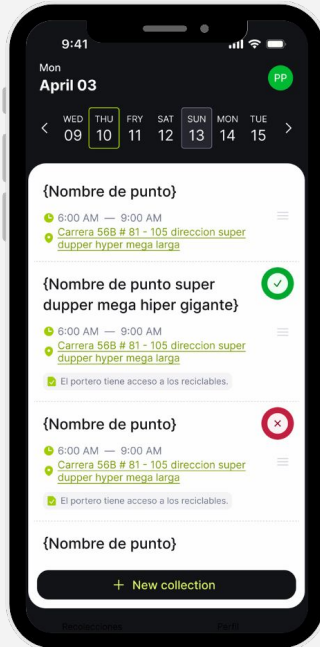

Automate manual tasks, like entering data on spreadsheets, so you can focus on scaling.

Streamlined Operations:

Centralize workflows—no more scattered data.

Add on: Driver app

Collection App: Manage **collections** of materials in reverse logistic operations using IA and creating smart routes.

Manage collections: Upload on-site material collection information.

Efficient operations: Resource and process automatization and optimization to increase productivity in logistics operations.

Verification: Review by both the collector and the processor to confirm quantities and proper disposal.

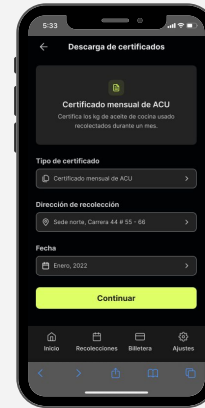

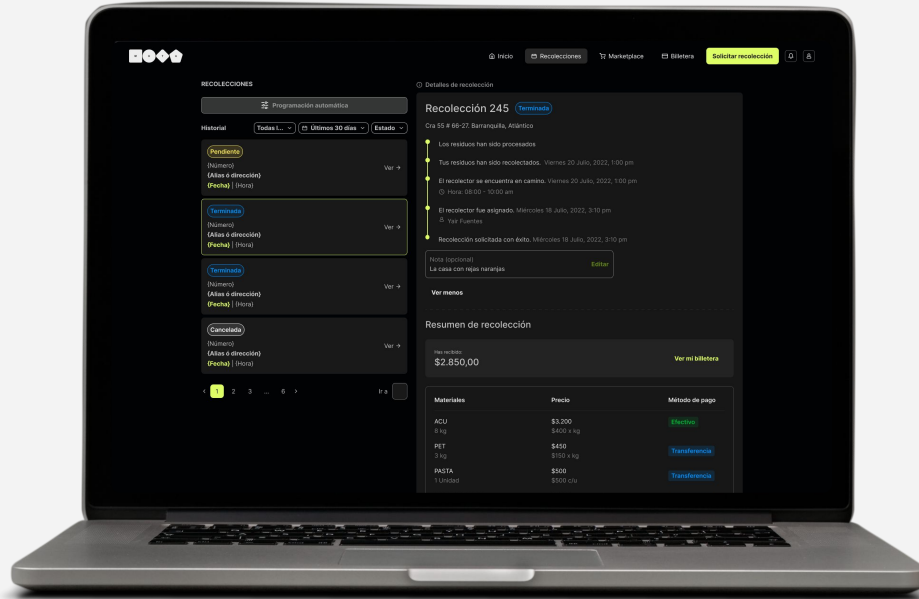

Reporting: Report of each visited point and environmental compliance.

Smart-routes: Efficient and optimize routes with geolocation of your users.

Real time data: Check the status, materials, weight, prices, addresses and other relevant information of the collection.

Add on: Generator App

Generator App: Allow generators **schedule** and **track** collections, download certification of collections, and track the materials delivered.

Instant certificates: Download collection certifications of any material by date and month.

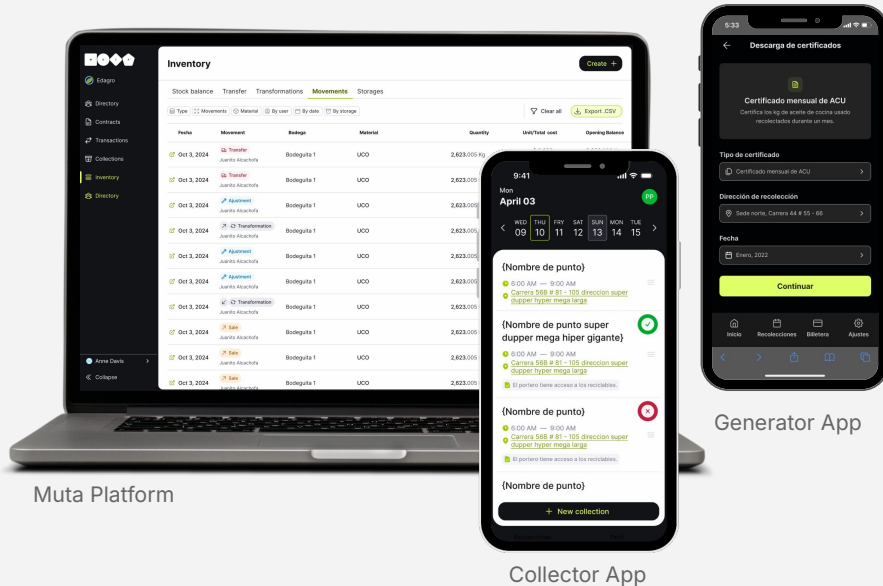

Data reliability: Verify the collector assigned to your collection.

Collection control: Verify in real time the status of the collection.

Monitoring and control: Follow and track materials by weight.

Collector suite

Muta platform, Driver App & Collector App: Use our three integrated tools for a complete solution. Monitor logistics and collection operations in real time, and ensure full data traceability throughout the process.

Muta Platform

Collector App

Generator App

Seamless Collaboration: Connect all actors, collectors, generators and processors, in a single workflow.

User data: Manage all the information of your users, location, collected materials, prices, certifications and weight of the materials.

Data validation: Validate material weights received at your warehouse to ensure accurate operational data.

Real-Time Data: Instant updates for drivers, generators, and admins.
