

Secure AI

24.8.2025

The dilemma with secure AI

We've been there. You want to use generative AI with your sensitive data. So, you need to bring the AI models to your environment

It's just there's so many different types of environments, so many different software components

Should we even be doing this ourselves?
Where do we even start?

Do it yourself

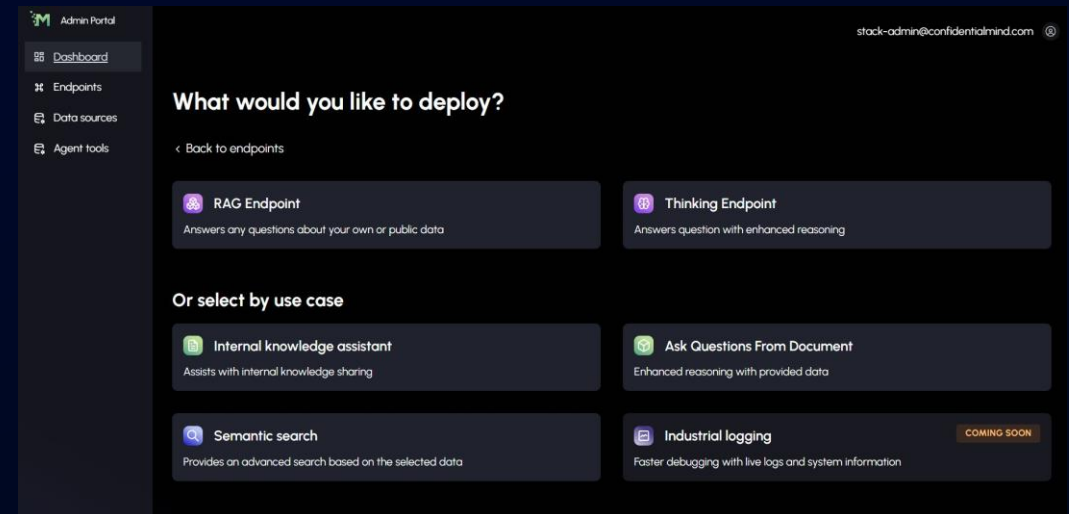

> 12 months
> €500k investment annually

- Choose & deploy inference server
- Choose & deploy vector database
- Choose & deploy data pipelines
- Choose & deploy security
- Build and deploy AI-systems
- Test in multi-environment
- Choose & deploy evals
- Maintain all the above

ConfidentialMind

Production-grade AI systems
deployed in minutes

VPC - on-prem - private cloud - edge
