

Collaborative Research with Social Impact

R&D&I programmes increasingly require the integration of **open science, public engagement and co-creation** as part of the criteria for project excellence and impact.

Horizon Europe promotes the incorporation of **citizen science** – one of the pillars of the European Open Science strategy – across all its Clusters and Missions, taking a step forward towards more collaborative forms of research and innovation.

Incorporating these approaches is no longer optional: it generates innovations aligned with society, improves the quality of results, strengthens **social impact** and increases the **competitiveness** of proposals.

Don't miss out on the European race: through social science methodologies, we help you incorporate open science into your research.

Don't be afraid of **participation and co-creation**: when well designed, they will become a **competitive advantage for your next European project**.

Start your journey towards open science
with Science For Change

Don't get left behind, develop impactful research
aligned with society!

How can we help you?

We help you integrate open science, public engagement and co-creation into your research and innovation projects, tailoring our approach to your sector, context and objectives.

We offer **tailor-made consultancy, mentoring and training** in our main areas of expertise:

- Sustainability
- Territorial Monitoring
- Health
- Science Communication
- Science for Policy
- Art, Science and Education

We support you from methodological design through to implementation and evaluation of results, including the preparation of European projects proposals.

We integrate **inclusive and gender-sensitive participation** with rigour, methods and an evaluable approach to generate new knowledge for complex challenges.
