

# PROFILE OF THE CIVIL PROTECTION AND EMERGENCY AGENCY OF CASTILLA Y LEÓN

The **Civil Protection and Emergencies Agency of Castilla y León** is the [management center of the Administration](#) of the Autonomous Community of Castilla y León that has powers over citizen protection.

The [actions of the Civil Protection and Emergency Agency of Castilla y León](#) are mainly regulated by Law 4/2007, of March 28, on citizen protection of Castilla y León.

Its powers include risk prevention and control, particularly self-protection; the planning of actions in emergencies with the coordination of all the intervening resources.

The Civil Protection and Emergency Agency [is organized into four departments](#):

- - The department that manages the European emergency number 1-1-2.
- - The department that manages the security provided in the municipalities through the local police.
- - The department that manages civil protection groups such as firefighters and civil protection volunteer associations.
- - The department in charge of training policemen, firefighters, civil protection volunteers...

All the personnel who work in the Civil Protection and Emergency Agency are [civil servants](#), with the exception of the workers who attend the European emergency telephone number 1-1-2, who are personnel with an employment contract.

Like all public administrations, the [Civil Protection and Emergency Agency must manage the recovery of normality after the catastrophe](#).

In order for the administrative management of the recovery of normality to be as fast as possible for the citizens, the intervening public administrations should have [an interconnected system that would allow them to interact with all the agents that were necessary to be able to adopt the most convenient decisions](#).

One of the key points of this recovery management system after the catastrophe is the [valuation/monetization of the catastrophe](#), of the damage caused by the catastrophe, for this reason, the Civil Protection and Emergency Agency of Castilla y León is interested to participate with a project that will develop this subject in the call [HORIZON-CL-3-2022-DRS-01-06 \(improved disaster risk princing assessment\)](#).

**The objective of the project** is to obtain a tool that public administrations would use to find out as quickly as possible the economic consequences of a catastrophe and to be able to adopt the measures that are necessary so that people, companies and industries can recover as soon as possible the normal.

**The development of the project:** Identification of the affected territory - Identification of the people, companies, industries, institutions affected - Individualized identification of the damages suffered - Monetization of the damages (individual valuation of the damages) - Decision of the type of public intervention necessary to mitigate the damage.

The tool resulting from the project can be applied to [all types of catastrophe](#).

The Civil Protection and Emergencies Agency would like to have [the largest possible number of public entities that manage catastrophes as project partners](#) because it is a model that can be [easily transferred](#) to any administration.

We are at your disposal to resolve any doubts you may have about the described project.
