Services

AI/ML Development

Leverage next-generation artificial intelligence solutions to drive efficiency, innovation, and gain a competitive advantage for your business.

CRM/ERP

Manage your business efficiently with CRM/ERP systems implementation. Automate and scale your business with us.
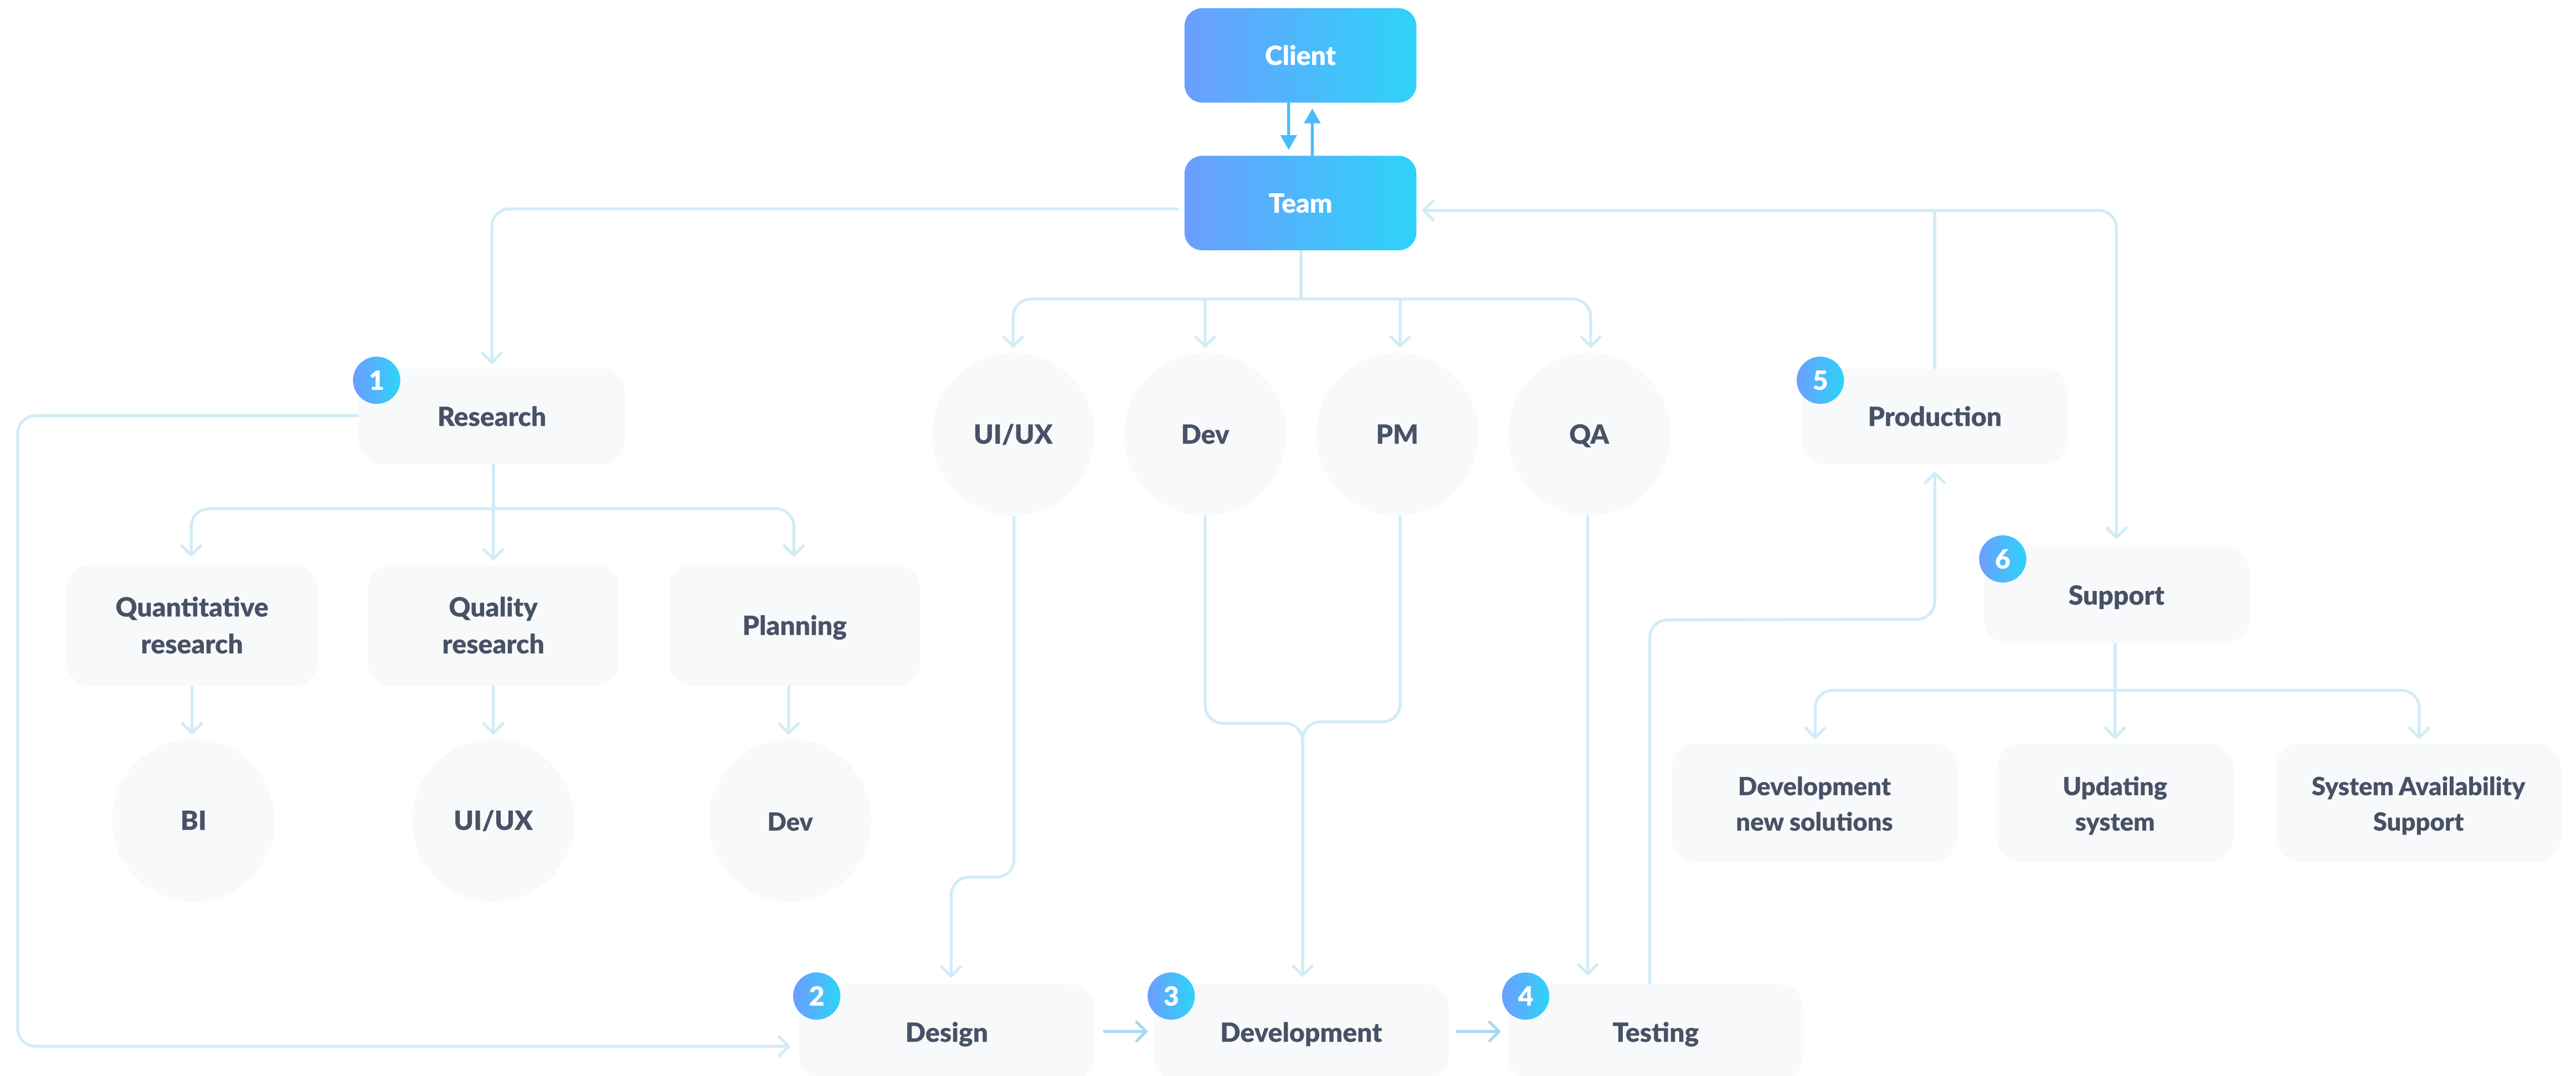

Mobile Development

Enhance your online presence with a mobile app. Create an app that's relevant.

Web Development

Create your application based on modern UI/UX design approaches, using the best design and development practices.

Your path from idea to maintenance

How we work

01

Discovery

We scrutinize and analyze business processes with you to realize your idea.

02

Planning

Create the application architecture with us. As a result, you get the generated database schemes, APIs, integrations that will be used in the project.

03

UI/UX Design

By understanding your needs, we create an app design that matches your brand identity, user experience, and target audience.

04

Development

Track results in our project management system. Transparent processes, stay in touch with developers, keep your finger on the pulse.

05

Testing

We thoroughly test the application to make sure there are no bugs. After testing, we put the product into production, guaranteeing its efficient operation.

06

Production

Start the project whether it is a local server or a cloud solution.

07

Support

You will stay in touch with your development team. Set tasks and monitor progress.

# How we save up to 40% on development costs:

- Qualified team of East Europe developers with unique expertise

- Transparent processes from start to finish

- Smart sourcing, work with a team to achieve results together

- One workplace, one team, no sub-contractors

- Don't hire one at a time, manage whole team for the same money (Example: everyone is good in their field. Get all the necessary engineers together to realize the task)

- Set tasks, get results. (Don't try to do everything yourself. Trust the team)

Tech Stack

- Use cutting edge technologies and trends to reduce clients' costs and improve speed to market

- Help our customers to be competitive
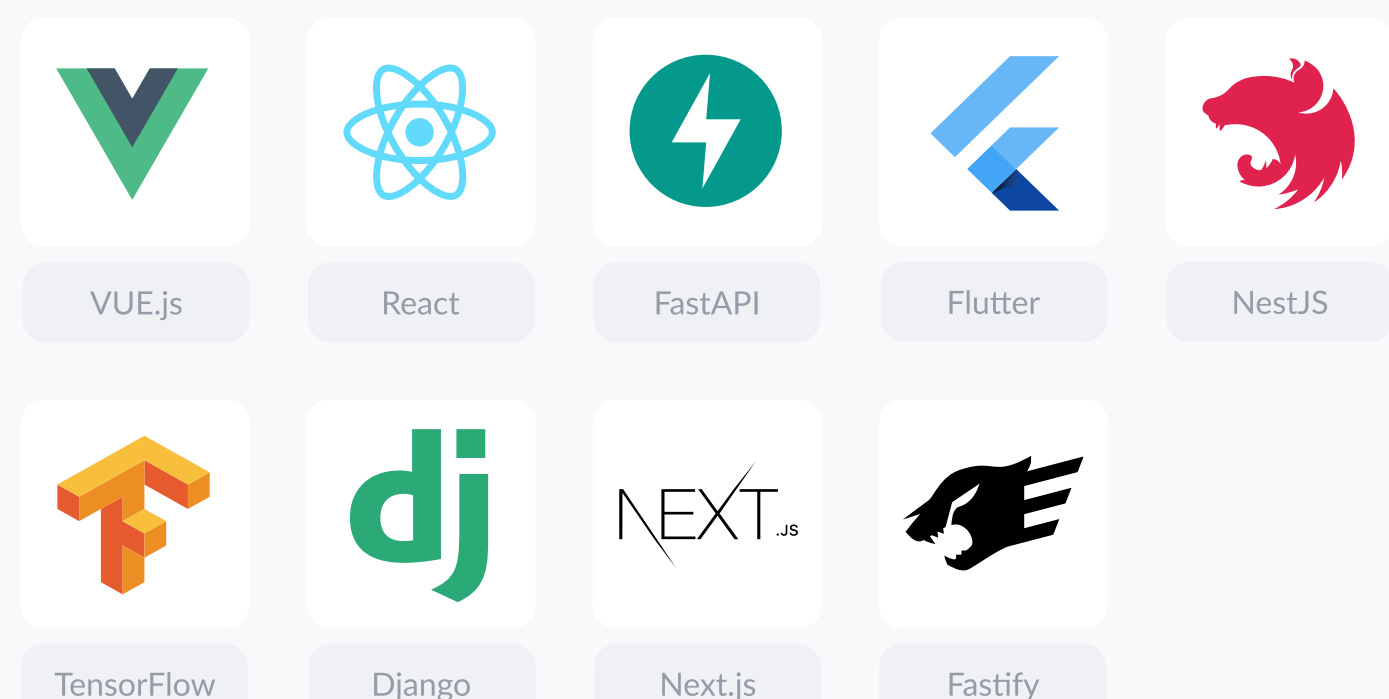

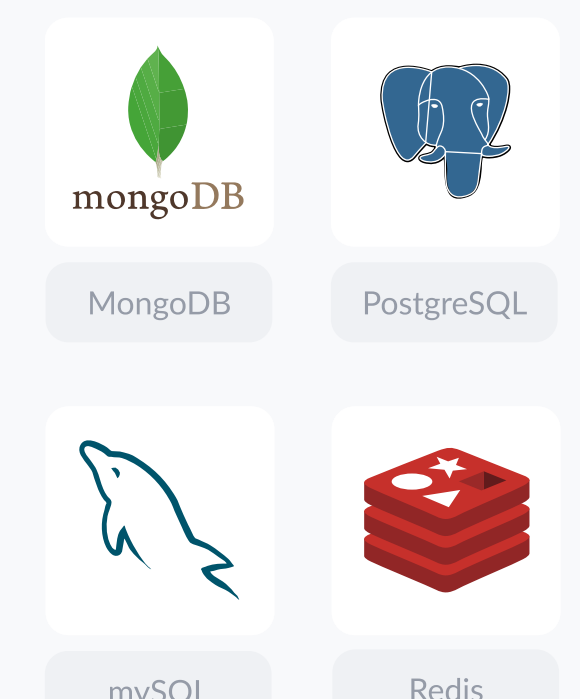

- Maintain development documentation

Languages

Python	C++	Go	Dart	PostgreSQL
TypeScript	Node.js	Rust	R	

Deployment

Aws	Docker

Frameworks
