

Our Voice Product

Transforming Business Operations

A novel approach to business operations, our tool incorporates a behavioral dimension through real-time data and a comprehensive view of behavior patterns, allowing businesses to enhance processes and operations with a deeper understanding of human interactions and tendencies.

The Voice Product

Our voice analytics assessment tool provides predictive behavioral analytics using acoustic speech analysis regardless of language, accent, and culture. Developed after years of research, our patented and validated technology links an individual's speech patterns to typical behavioral tendencies - generating easily understandable insights which you can use in your daily operations.

Core Technology

The core technology combines unique acoustic signal processing (speech prosody) and advanced algorithmic machine learning (artificial intelligence). The operational system provides automatic, remote, language-independent, and real-time analysis, which supports cloud, on-premise and mobile architectures. The system is compliant with regulatory standards.

Behavioral Insights

Our voice analytics tool measures behavior, personality, and momentary sentiments, providing insights for organizations to make better business decisions. Among our products:

- Conversion & Consumer Insights
- Risk Management Optimization
- Sales & Marketing Data
- Customer Churn Probability

- Candidate Success & Reduced Hiring Time
- Employee Retention & Wellness
- Mental Health Screening & Remote Patient Monitoring

- Big5 & Behavior Matching
- Atmospheric & Communication Trends
- Dynamic Chatbot Automation
