DB Systemtechnik

Our services at a glance

We are Europe's hub for classic and digital rail technology!

We are Europe's leading service provider in the railway sector for engineering and testing services. Together with our subsidiary DB ESG in the UK and a team of more than 1,200 employees, we set global standards. Our expertise covers the entire railway system: through our daily work, trains keep running, people can travel, and essential goods are transported.

From concept to implementation, we deliver technological and digital solutions for procurement, operations, and maintenance. Our state-of-the-art laboratories, testing facilities, and dedicated measurement vehicles enable us to carry out testing, simulations, and trial runs at the highest level – from the smallest oil sample to full vehicle approvals.

Our Locations

Our aim is to drive rail innovation worldwide: We have offices in Germany, France, Sweden, Poland, the UK, China, and more.

Why work with us?

We are Europe's largest centre of expertise for railway technology.

We combine decades of experience with the latest technical and digital knowledge.

We always consider the rail system as a whole and offer all-round solutions.

We are a rail powerhouse.

More than
50
competence centres
