PRODUCT AND SERVICE NEWS

2024-2025 HEATING SEASON

Production, delivery, and installation of modular boiler houses.

EcoHeat specializes in modular biomass-powered boiler houses. Our offer include furnaces, boilers, heat exchangers, automatic control systems, conveyors, and storage facilities. In collaboration with several Latvian municipalities and heating supply companies, design-and-build projects has been implemented in Latvian regions, including Riga and the surrounding areas. Modular boiler houses provide heating solutions for industrial needs, heating, and hot water, using renewable, local resources.

Biomass boiler
systems from 1
to 50 MW

ESP - electrostatic precipitator

We offer full-cycle boiler house equip with ESP (electrostatic precipitators) and flue gas cleaning systems—from design to installation, integration, and maintenance. Our experience in manufacturing and installing ESPs will help increase your boiler house's efficiency and safety while ensuring compliance with the European Union's emission requirements directive.

Masonry and furnace heat-resistant lining

EcoHeat provides masonry services for biomass furnaces, utilizing heat-resistant bricks (chamotte) to ensure the longevity and efficiency of the furnace. These specialized bricks are crucial for withstanding the high temperatures generated within the furnace, preventing structural damage, and maintaining optimal performance.

Manufacturing and service of boiler flue gas pipes

EcoHeat Technologies - efficient heating, sustainable future

Flue gas pipes and stacks

Diverse experience of free-standing chimney and flue gas pipe manufacturing, delivery and montage. Customizable solutions depending on placement.
