

# DevWorx introduction

---

[devworx.tech](https://devworx.tech)

Purpose-built systems designed to scale,  
automate, and differentiate

DEVWORX

# Industries we've worked for

Analytics

---

Betting

---

Banking

---

Pharmaceuticals

---

High-traffic agencies

---

Insurtech

# Highlights

## Observability cloud solution presented in Jetbrains .Net Days 2025

Presented a cost-effective observability suite (logging, tracing, metrics) using open-source technologies in AWS: Conquering Distributed Cloud Logging Without Breaking the Bank

## Real-time IOT communication for fleets of vehicles

Processing data from OBDs in electric vehicles to calculate their battery health in real time and deliver practical insights through dashboards and reports

## Betting low-latency feed

Built a pipeline that could process tens of thousands of fixtures per day using an asynchronous, event-driven system horizontally scaled

## Custom-built AI solution with real business impact

Designed, trained and deployed a machine-learning solution for the company's multi-source entity matching needs

## AI RAG pipeline for internal knowledge assistant

A chatbot using the company-specific context to answer employee questions, making document search redundant

## Cloud applications expertise

We have deployed numerous resilient, cost-effective, easily-maintainable distributed cloud services (mainly in AWS, but also Microsoft Azure), with practically unlimited scaling potential and state of the art authentication and authorization technologies using serverless solutions
