

Analyze, report, and act on your exposure to physical climate risk

EarthScan –Mitiga’s SaaS platform– analyzes, reports, and allows your business to act on its exposure to climate risk. In a few seconds, you will gain customized, asset-level insights into 10 hazards across time horizons and climate scenarios, allowing you to adapt to or mitigate potential damages.

Multiple use cases. Flexible delivery.

Asset & location analysis

Identify assets at risk, prioritize interventions, and inform (re)location strategies to climate-proof assets

Operational resilience

Inform defensive and adaptive measures including retrofits, replacements, or asset retirement

Due Diligence

Asset mix screening to identify acquisition targets, inform negotiations, and optimize portfolio

Reporting Requirements

Support stakeholder reporting, as well as relevant regulatory requirements (IFRS S2, CSRD/ESRS E1)

Innovate with Mitiga

Our corporate innovation framework

Strategic positioning

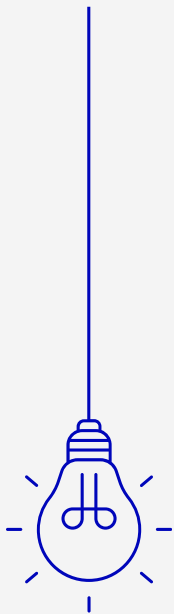

At Mitiga, innovation challenges are strategic entry points into **new sectors, partnerships, and product co-development**. They help us validate technology in real-world contexts, stay ahead of market needs, and **position Mitiga as a trusted partner in climate resilience**.

Tailored deployment

By co-designing **pilot programs**, we deliver tailored climate risk services to our clients, with customized onboarding and technical assistance. **Corporations gain access to EarthScan modules adapted to their specific needs and operations**, engaging directly with our climate scientists.

Collaborative impact

These collaborations deliver **speedy, high-precision insights** and foster continuous knowledge exchange to drive forward-looking planning across asset protection, location strategy, and broader risk management roadmaps, **strengthening resilience within clients' portfolios**.

How it works

1

Challenge Fit

Identify climate-related innovation challenges where Mitiga's scientific models and data services can deliver measurable impact.

2

Co-Development

Collaborate with teams to scope pilots, define KPIs, and develop new modules. Provide onboarding and support for agile deployment.

3

Impact & Scale

Generate actionable insights and build long-term resilience based on real-world results. Our solutions are designed to scale across assets and geographies.
