

# Enhance on-site security operations without compromising profits

A new standard of surveillance operations, enabling you to maximise surveillance coverage and productivity.

**Enhance Robotics-Driven 360° Surveillance**  
Use a combination of robotics technology, sensors and intuitive software to gain 24/7, 360 security surveillance for your site and assets.

**Real-Time Surveillance Control**  
Get complete control and access to your surveillance and information in real-time from anywhere around the world.

**AI-Powered Site Security**  
Cover blind spots and ensure a security presence across the whole site, as Soranet™ uses AI to pick up on site-wide anomalies areas for potential breaches.

**Early Threat Detection**  
Classify and identify threats and anomalies at the earliest stages, allowing you to minimise the chances of theft. Customise the events you consider urgent versus non-urgent.

## SORANET™

### The perfect system for on-site security teams

#### Soranet™ Management Platform

Base module package which is a surveillance /security management system. With this platform you can integrate basic surveillance and security hardware to operate and manage.

#### AI Foresight Engine

Use AI Technology to learn site-wide activity, helping to detect anomalies faster and predict incidents based on past events.

#### AI LookOut Engine

Integration of computer vision algorithms into surveillance cameras. The AI Lookout engine can be used to detect health and safety risks, security threats and track site-wide activity and movement of people, machinery and vehicles.

#### AV Engine

Integration of autonomous vehicles (Drone or UGVs) to automate patrols, respond to threats and incidents detected by the AI LookOut Engine and provide on-site security staff with more eyes/coverage on the ground.
