

Who we are

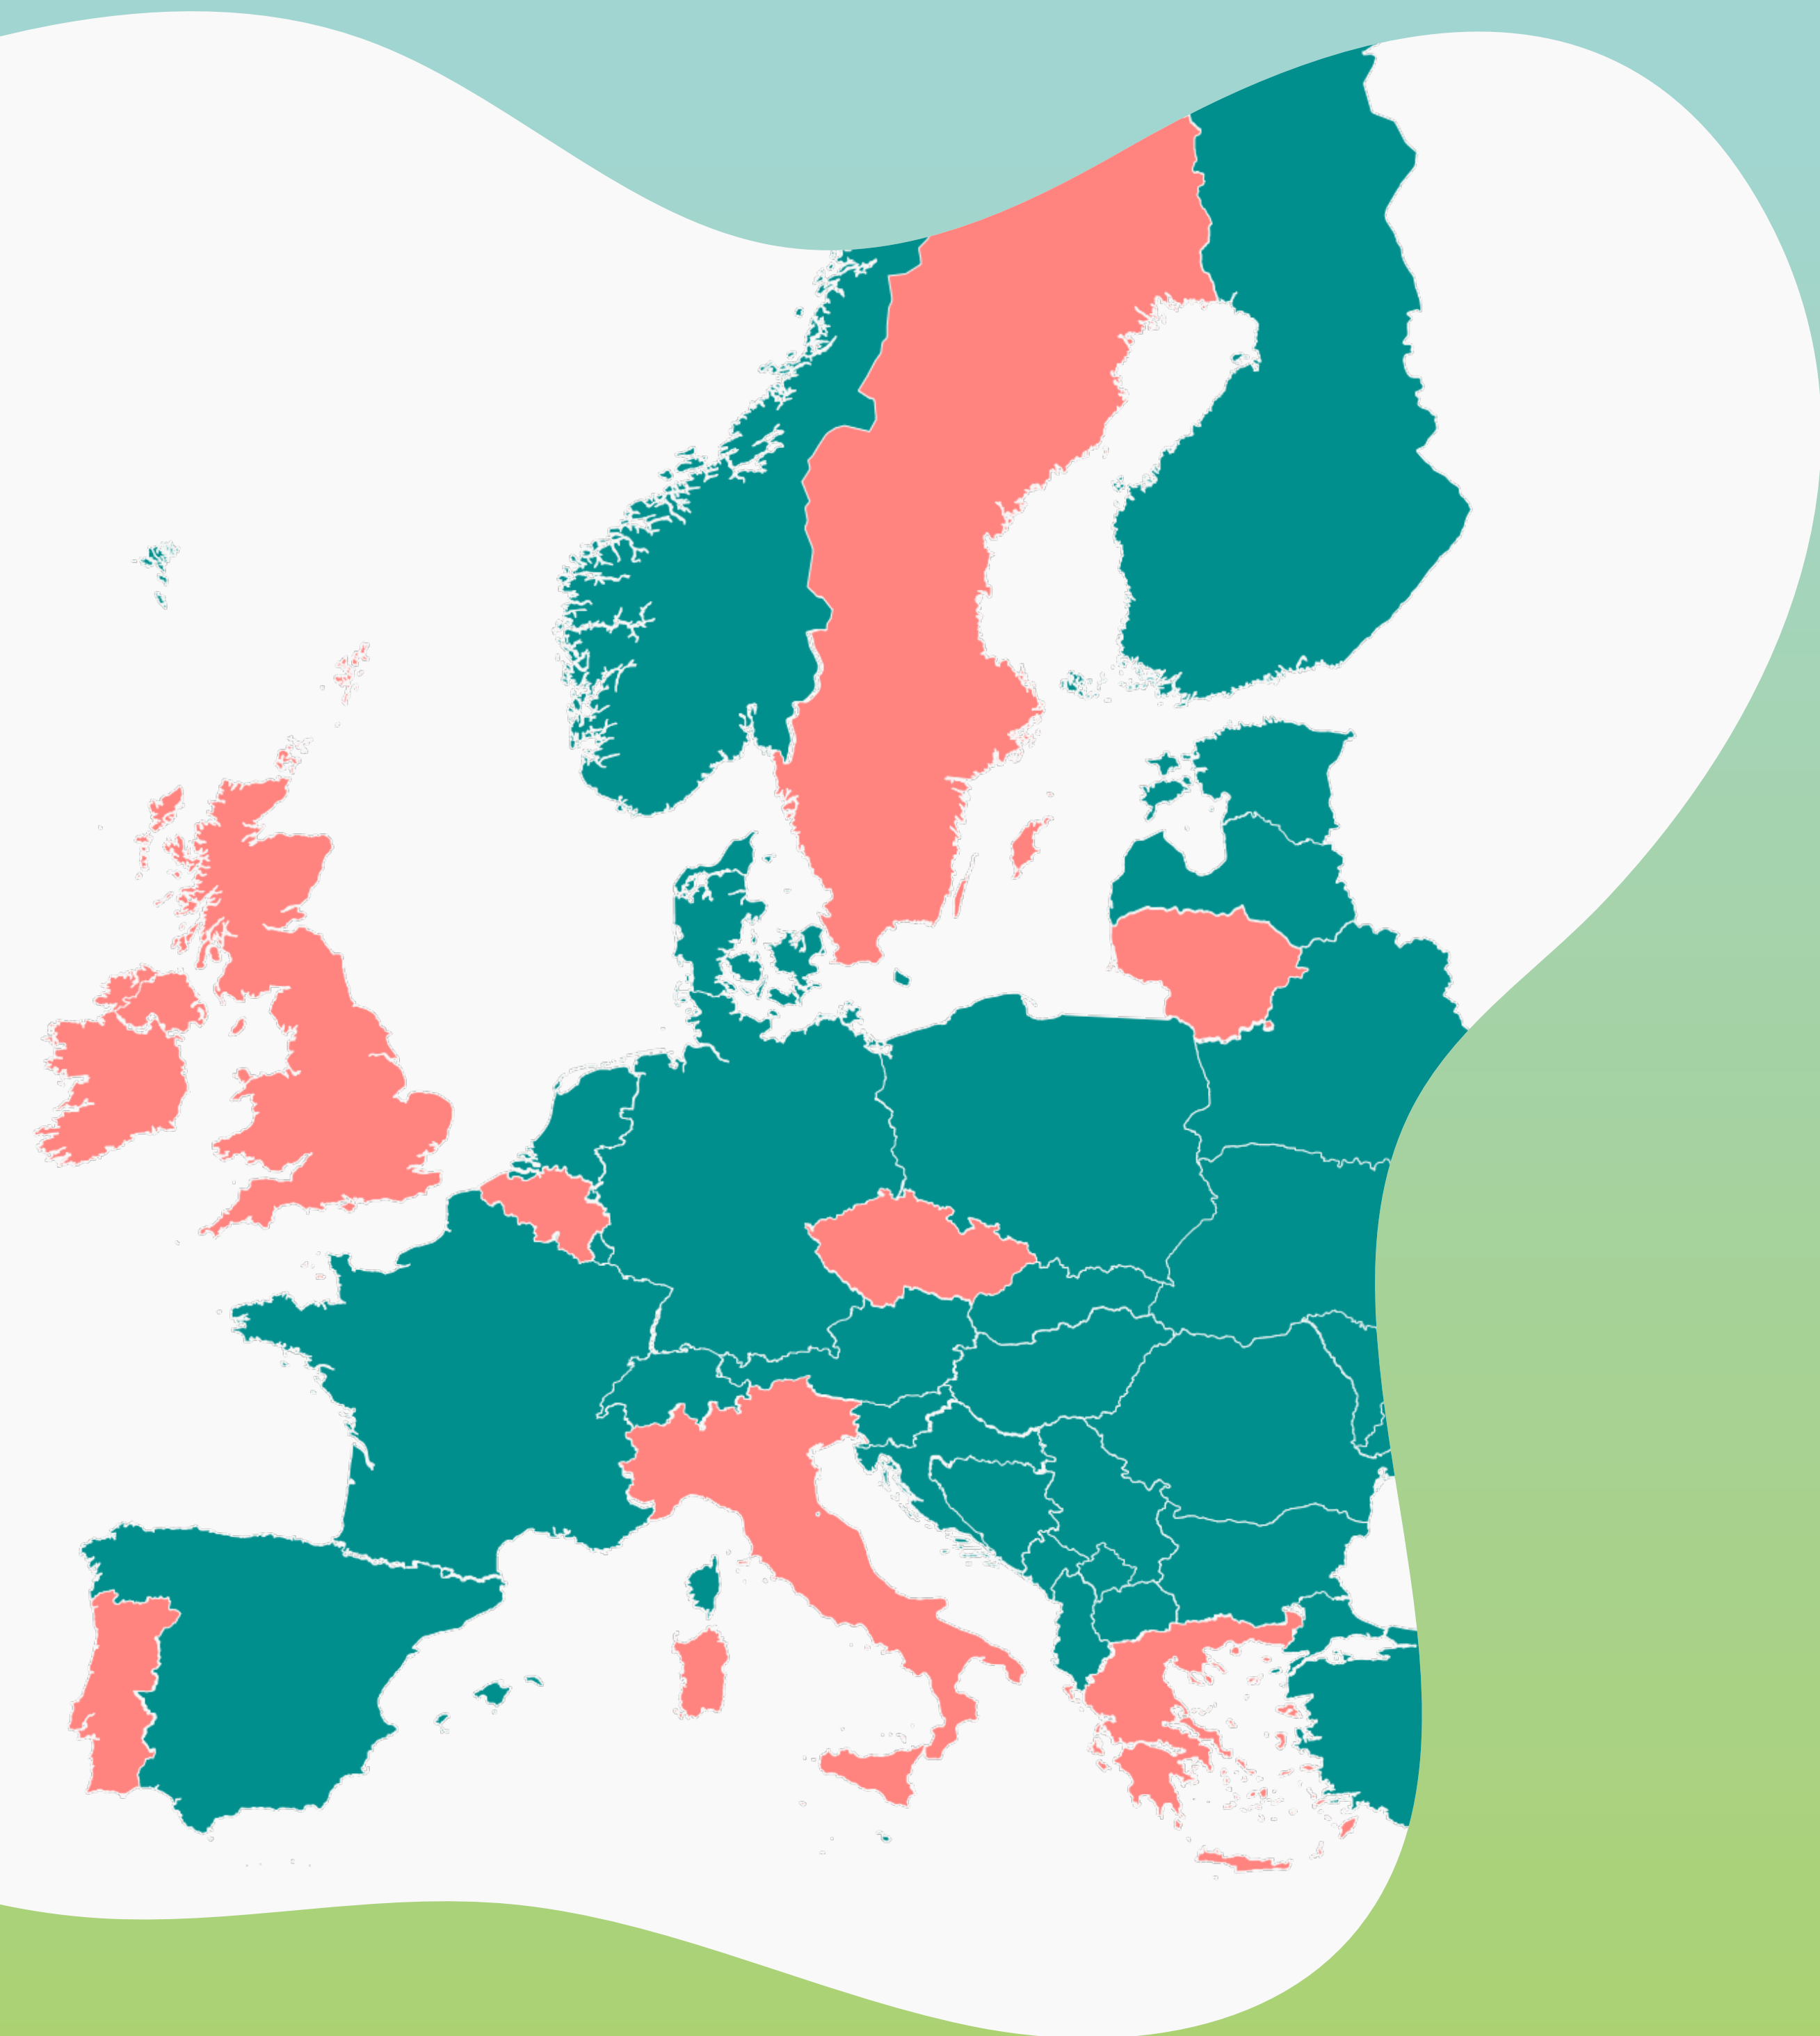

DISARM unites 28 partners across 12 countries, combining clinical, technological, patient and health authority expertise to improve ovarian cancer risk assessment and early detection.

What we are working on

DISARM is working to integrate multifactorial ovarian cancer risk assessment in routine clinical practice, test innovative blood-based detection technologies, and develop supporting digital tools.

What's the one thing we need next

We need strong clinical study delivery and high-quality data to validate DISARM's approaches, develop digital tools and prepare future integration into healthcare systems.

**5 years Mission Cancer:
Stronger Through Connection**
