

Rainwater Collectors

Harness the power of nature with LEMP rainwater collectors—the effortless way to conserve precious natural resources. Designed for maximum efficiency, our collectors harvest rainwater without restricting downpipe flow, featuring a smart overflow system that automatically directs water back into the downpipe once your barrel is full.

Available in two distinct models—Basic and Style—our rainwater collectors offer versatile solutions tailored to any aesthetic preference, complete with matching accessories including caps, adapters, and connection tubes. Flexible hose connections ensure seamless integration with standard Gardena products and other major systems. Crafted for durability and effortless integration, LEMP rainwater collectors are available in all common sizes and premium materials, including classic zinc, pre-weathered zinc, solid copper, and colored finishes.

Leaf Guard

A clogged gutter screen can reduce drainage performance by 50% or more, causing water to back up and creating dangerous, hard-to-reach maintenance tasks high up on a ladder. LEMP leaf guards eliminate this risk entirely. Installed in an easily accessible position lower down the downpipe, they allow fast, effortless cleaning and inspection from the safety of the ground—no ladder required.

Engineered to keep your roof drainage system operating at peak performance year-round, our leaf guards are available in all common sizes and premium materials, including classic zinc, pre-weathered zinc, and solid copper. Custom surface finishes can also be supplied upon request to match any building's aesthetic.
