

WINGS CEF Healthcare projects

5GSC SG1, July 3rd, 2025

5G-TRACE - 5G-based TRAnsformation of a CanCER Hospital to support patients' treatment in a “home like” environment

- The project will build **5G Mobile Private Networks (MPNs) based on 5G-SA technology**, to provide indoor connectivity at two locations of cancer healthcare facilities in Thessaloniki, Greece, the main medical centre **Theageneio Hospital** and a separate and remote home-care unit, **Nikos Kourkoulos**.
- The new networks will be validated through innovative and demanding **patient monitoring** and **medical diagnosis services** use cases:
 - patient vital signs' remote monitoring,
 - remote advice of doctors to patients through conferencing tools,
 - fusion and analysis of signals,
 - personalized notifications
- Furthermore, **Smart and Green applications for building facilities** will be validated, which are monitoring the hospital environment through **AI analytics** by processing data from **smart sensors** for parameters such as **electricity metering & drinking water consumption monitoring** and **smart air quality measurement systems**.

5G-SHEAL – 5G- enabled Surgery Planning with Holograms and Educational Streaming for NKUA Aretaieio Hospital

- The project will deploy a **5G Mobile Private Network (MPN) based on 5G-SA technology**, along with the required upgrades in the backhaul equipment, antennas and links to the rest of the OTE network, supporting exclusively and only the needs of the **ARETAIEIO University Hospital** operating rooms, Surgical Wards, Education centre and Radiology-Radiotherapy Departments, providing 5G coverage, high capacity, reduced latency, and high reliability mobile services.
- The network will be accessible only by the users/devices (e.g. VR/XR glasses or smart wearable devices) equipped with designated SIM provisioned cards.
- Use Cases in scope:
 - Patient Monitoring:
 - Surgical Planning:
 - Oncology Imaging in Operating Rooms:
 - Surgical residency core training:
 - Medical Students and Patients education

● Smart Hospital Monitoring & Automation

- Real-time monitoring of vital signs (24/7, in-hospital and at home)
- Fall detection & panic alerts for emergency response
- Remote post-operative care to reduce readmissions

● Edge AI & 5G-enabled Features

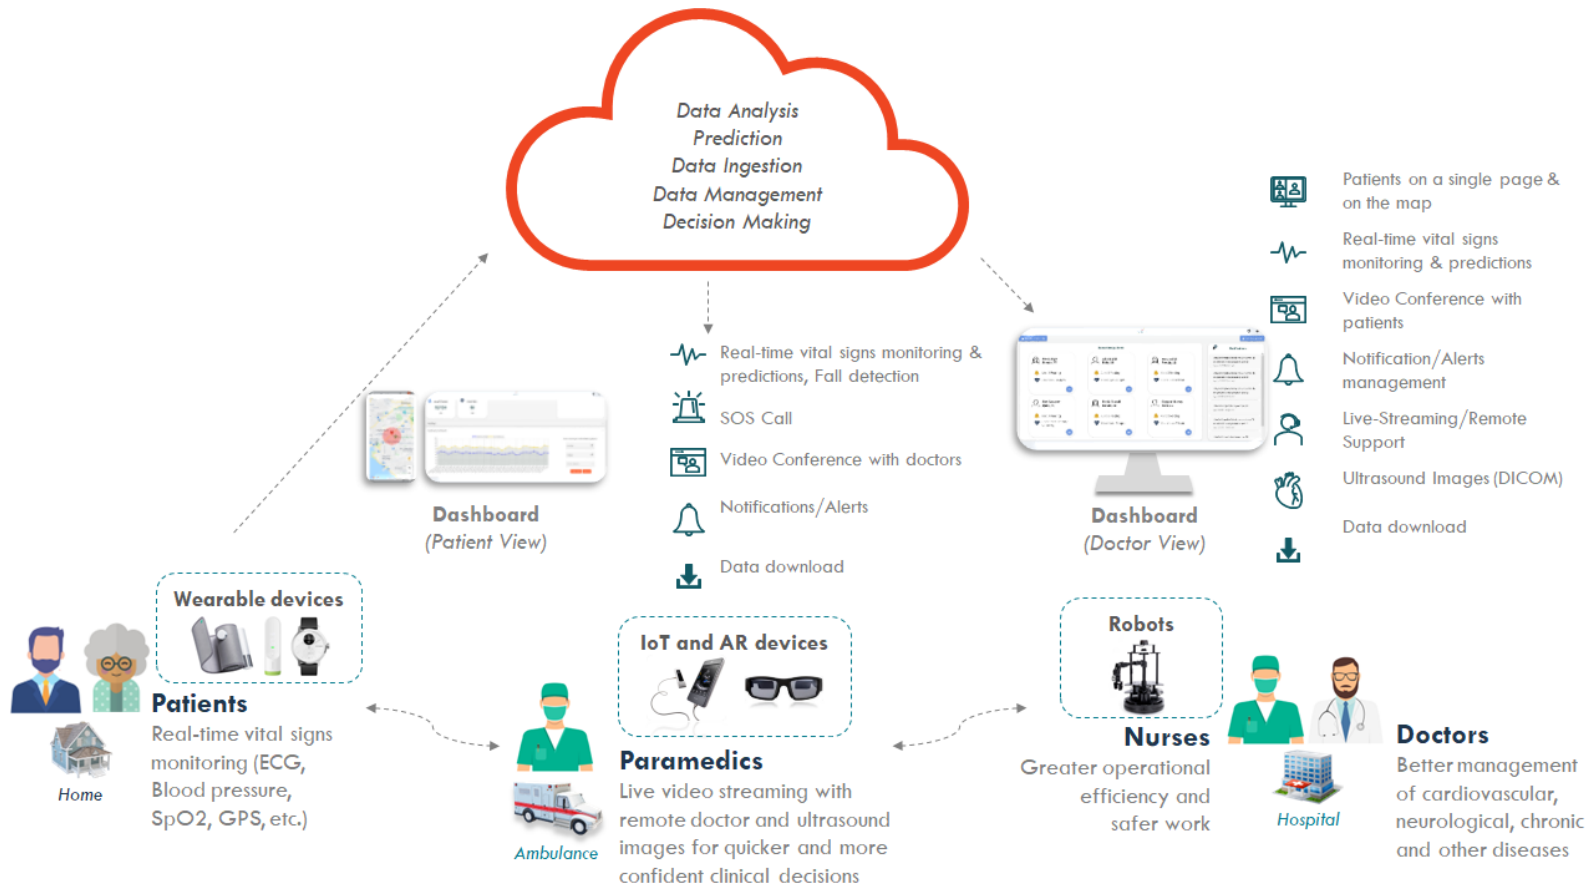

- Predictive analytics for early detection
- Custom patient alert thresholds reduce false positives
- Low-latency data processing via edge computing

● Advanced Medical Applications

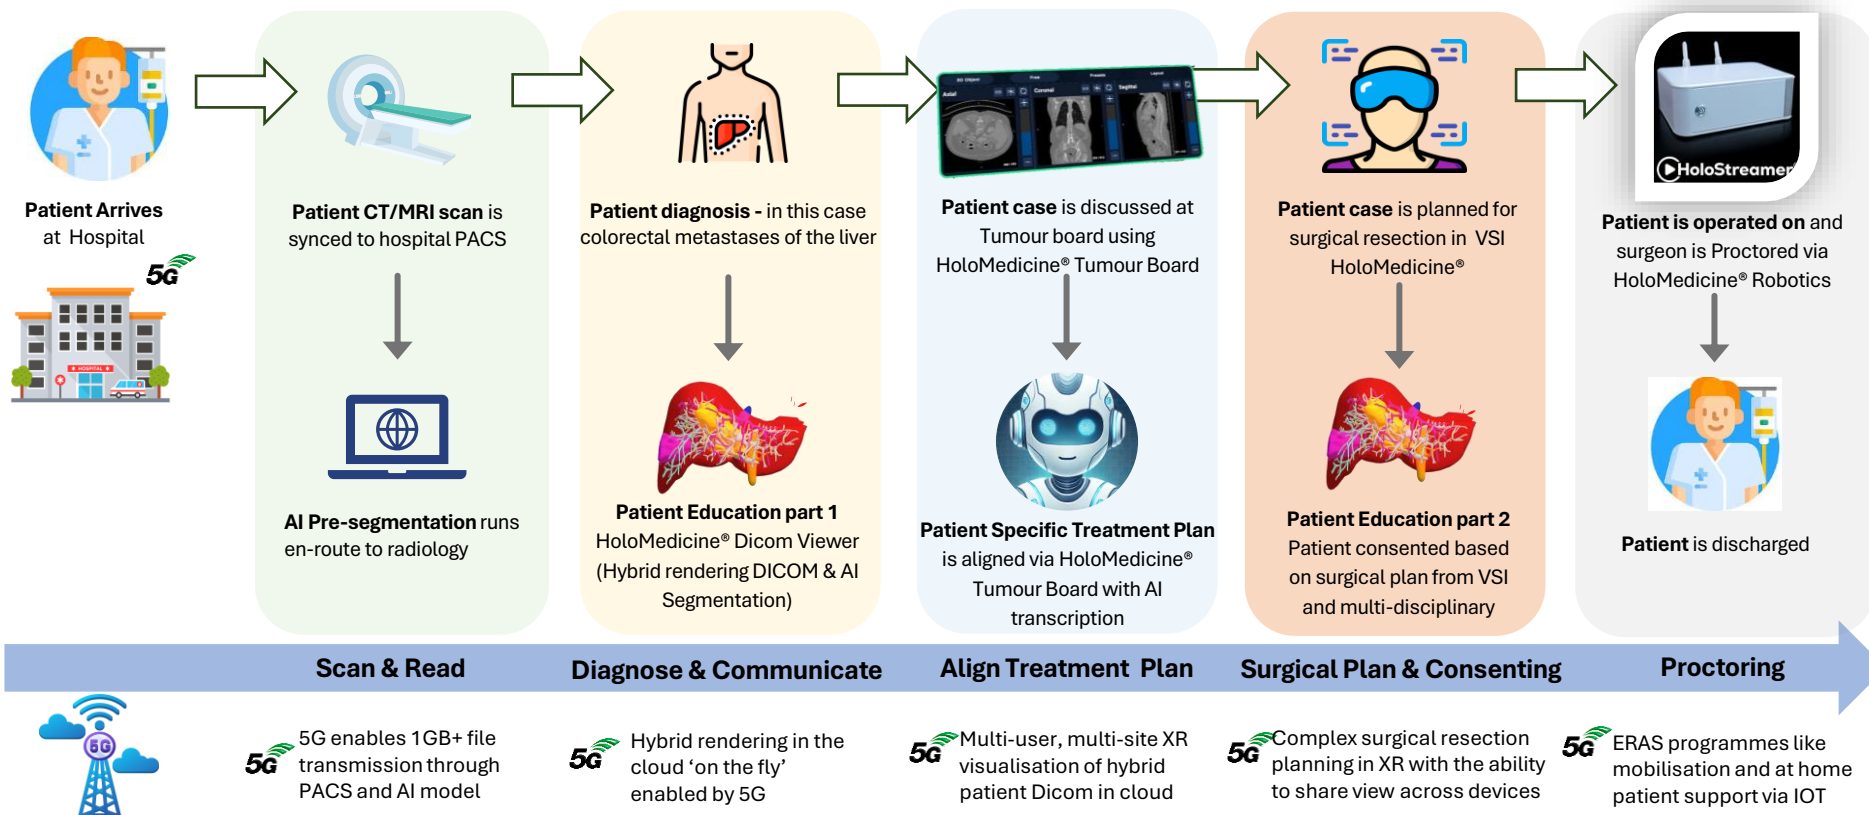

- Digital twins for simulation and maintenance
- VR/XR for surgical planning and medical education
- Deployment of top-tier medical devices and systems to fully digitize hospital operations, enhancing both patient care and hospital efficiency.

Covering the following: 24/7, Indoor Coverage, Capacity, Latency, Security of data

A Patient's Journey with 5G and HoloMedicine® technology – Value Driven

Detailed Use Cases : Surgical Planning and Patient Education with 3D HoloMedicine

Multi-disciplinary team reviews of complex cases is commonly known as '**Tumour Boards**'. Attended by oncologists, radiologists, radiation therapists, surgeons, fellows and residents, the goal of the tumour board is to align on a '**patient specific treatment plan**'

The problem: All attendees see the same images but have different understanding of what they see and therefore interpret them differently. The need to discuss together.

The solution: Using computer vision & AI models to simultaneously visualise in both 2D and 3D as the tumour board reviews patients scans, automatically highlighting pathology – and using LLM AI for tracking conversation and summarisation of the treatment plan

Tumor Board

- Remotely join shared sessions with medical professionals around the world in XR or 2D based on preference
- Receive AI-generated treatment plans & summarised reports
- Slice through 2D and 3D visualisations at the same time to ensure mutual understanding and slice position

Patient Education

- Walk patients through their CT or MRI diagnostic testing in an immersive environment
- Give real world context with 3D models for better understanding
- Engage real 'informed consent' and reassure patients and family

The 5G HoloMedicine® Platform: Transforming Medical Education & Surgical Precision

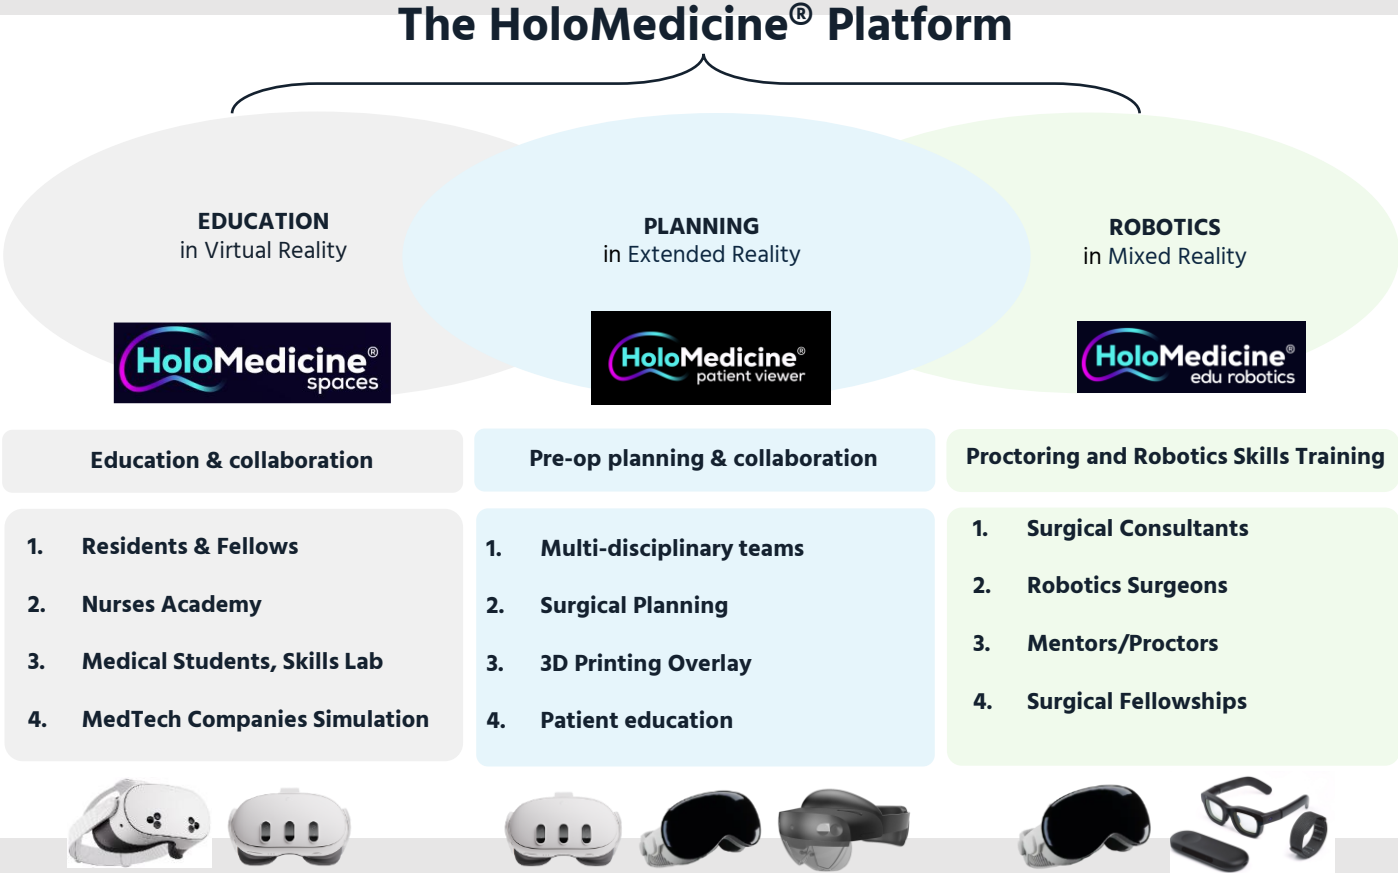

Connected in 5G and Hosted on
Secure Medical Cloud

HoloMedicine® Product &
Immersive Experience

What is it for?

Who is it for?

Recommended Devices*

- **Operational**

- Integration with legacy hospital systems
- Device and infrastructure interoperability gaps

- **Regulatory & Compliance**

- Ongoing ISO 13485 & CE certification for regulatory compliance
- Standardization of remote care protocols

- **User Readiness**

- Limited 5G-ready medical devices
- Training required for digital tools & workflows

- **Scalability Concerns**

- Infrastructure gaps in rural areas
- Ensuring data security in edge/cloud settings

- **Policy & Standardization**

- Harmonized EU healthcare regulations
- Accelerated certification of medical devices & AI tools

- **Technology Deployment**

- Extend edge/5G access to underserved areas
- Promote open platforms for device integration

- **R&D and Collaboration**

- Fund clinical validation of smart health solutions
- Foster cross-sectoral pilots (hospitals, municipalities)
- Contribute to 5G Community Conference roadmap

Thank you **wings.**
