VISION AND VALUES

●●● DEVELOPING KEY TECHNOLOGICAL PRODUCTS AND SOLUTIONS TO ADDRESS CHALLENGES.

ANALYSIS

With us, you'll find a team that besides the technical skills, will understand the business and help you find the best solutions.

FLEXIBILITY

We adapt to our clients' needs. We build hybrid teams or work project-based. The client has the ultimate balance of resources and cost-saving.

SERVICES

● ● ● WE OPERATE WITHIN A COMPLETE SET OF SERVICES AND ABILITIES FOR DEVELOPING, DESIGNING, TESTING AND SUPPORTING SUCCESSFUL SOFTWARE PRODUCTS

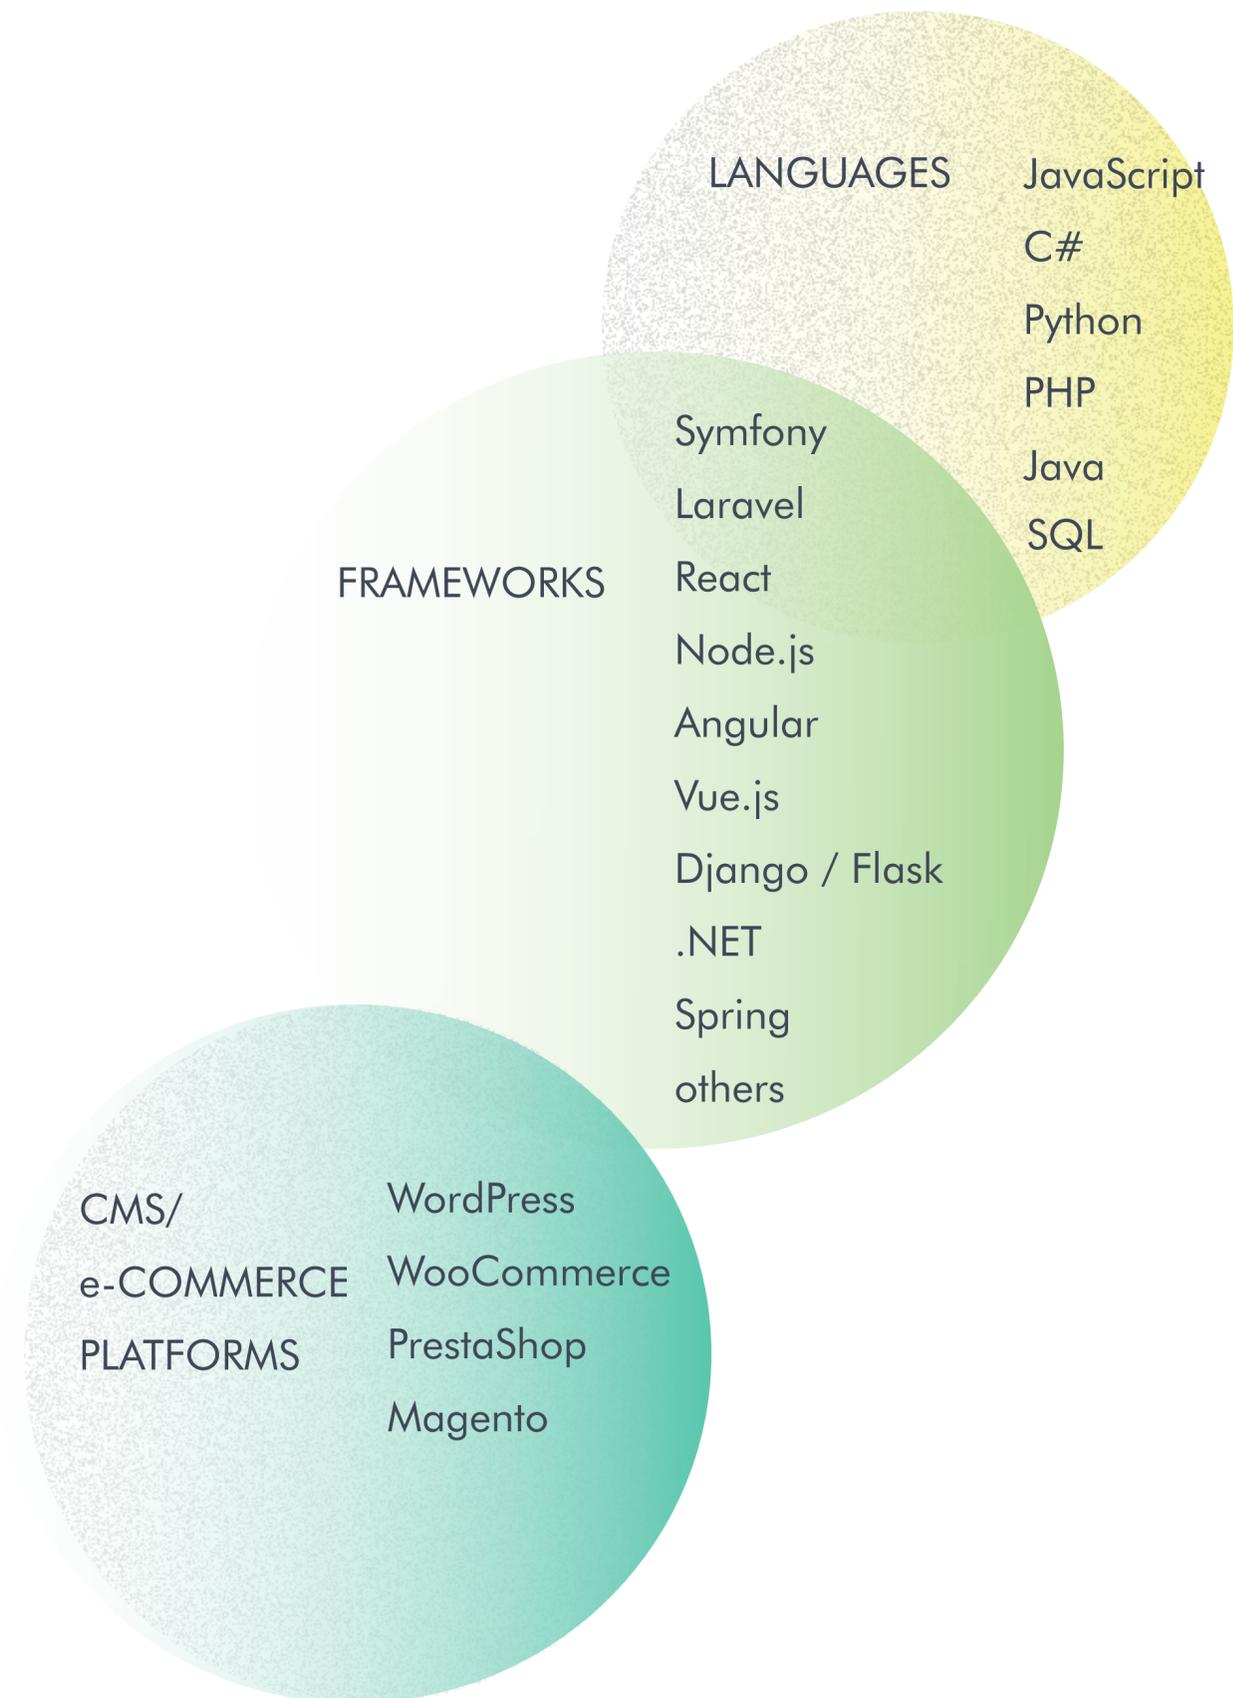

Web Development
Mobile Development
UI & UX Design

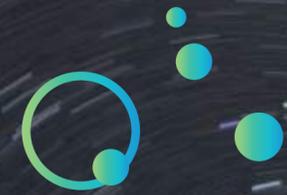

Artificial Intelligence
Quality Assurance & Testing
Project Management

Business Analysis
Technical Support
IT Consulting

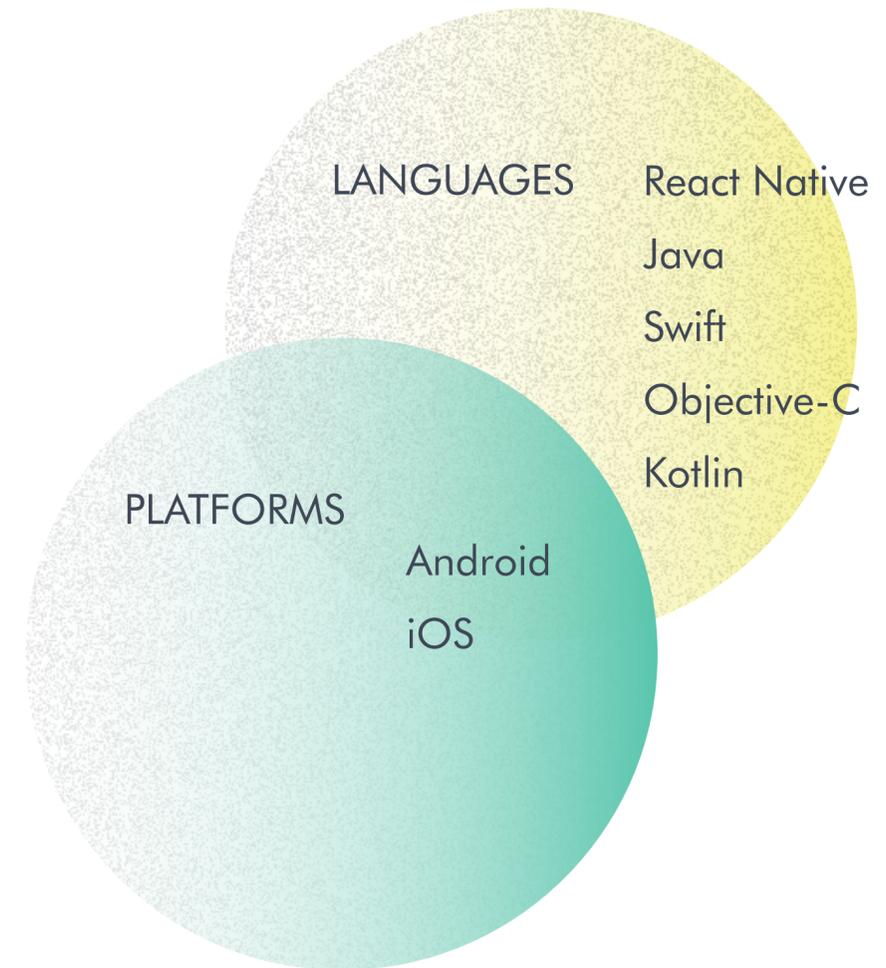

WEB APPS TECHNOLOGIES

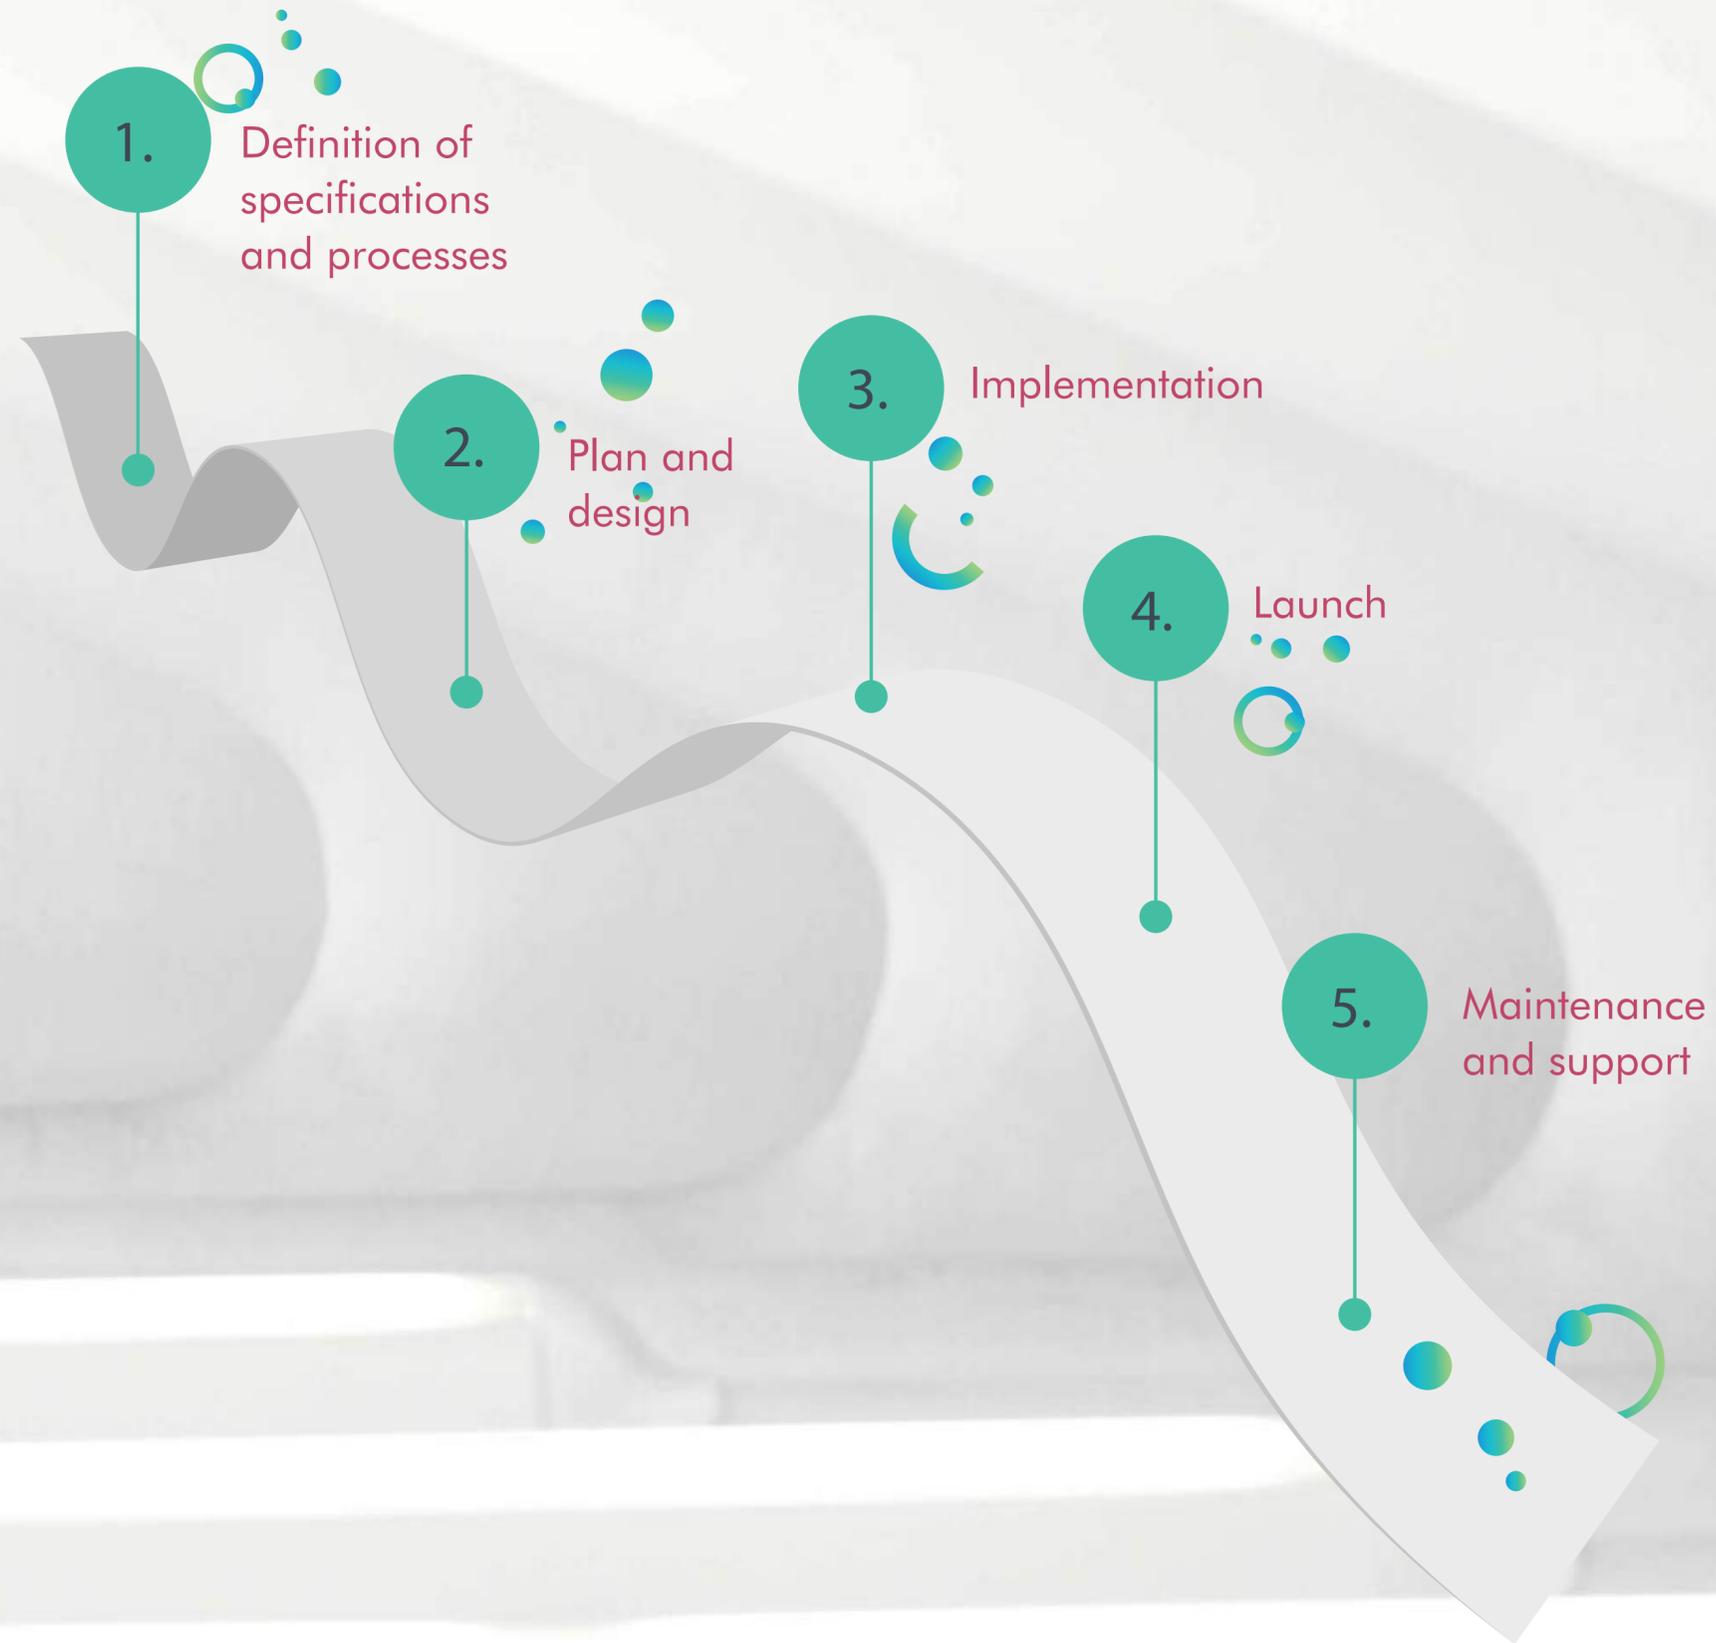

MOBILE APPS TECHNOLOGIES

CRAFTING THE SOLUTION

STARTING FROM PROJECT SPECIFICATIONS AND GOING THROUGH DEVELOPMENT, DESIGN, TESTING, LAUNCHING AND SUPPORT, EACH STAGE CONTRIBUTES TO DEFINING THE FINAL PRODUCT.

SPECIFICATIONS AND PROCESSES

The first step is to **analyze the project specifications** in order to better understand the business logic and the different functionalities needed.

The client is taken through all the procedures and processes that will take place during the development cycle. Based on these, a management plan is made.

PLAN AND DESIGN

Following up is the **development plan for technical and UI/UX** - our projects follow the **Agile** model:

- Establishing the technologies, tools and communication streams that will be used during development.
- Setting up the mechanisms for tracking and solving tasks/bugs.
- Setting up the environments for development and progress tracking.

IMPLEMENTATION

Sprints (group of short and accurate tasks) are defined

At the end of each iteration (solving a Sprint), the work done is reviewed, and the follow-up Sprint is planned.

This way, if change requests occurs, they can be introduced very easy in the development process.

If the developed components passed the tests and the last requirements have been implemented/solved, the launching phase is starting.

LAUNCH

After the final testing phase and the complete review of the components by the project manager and client, the process of **publishing in the production environment(s)** is started.

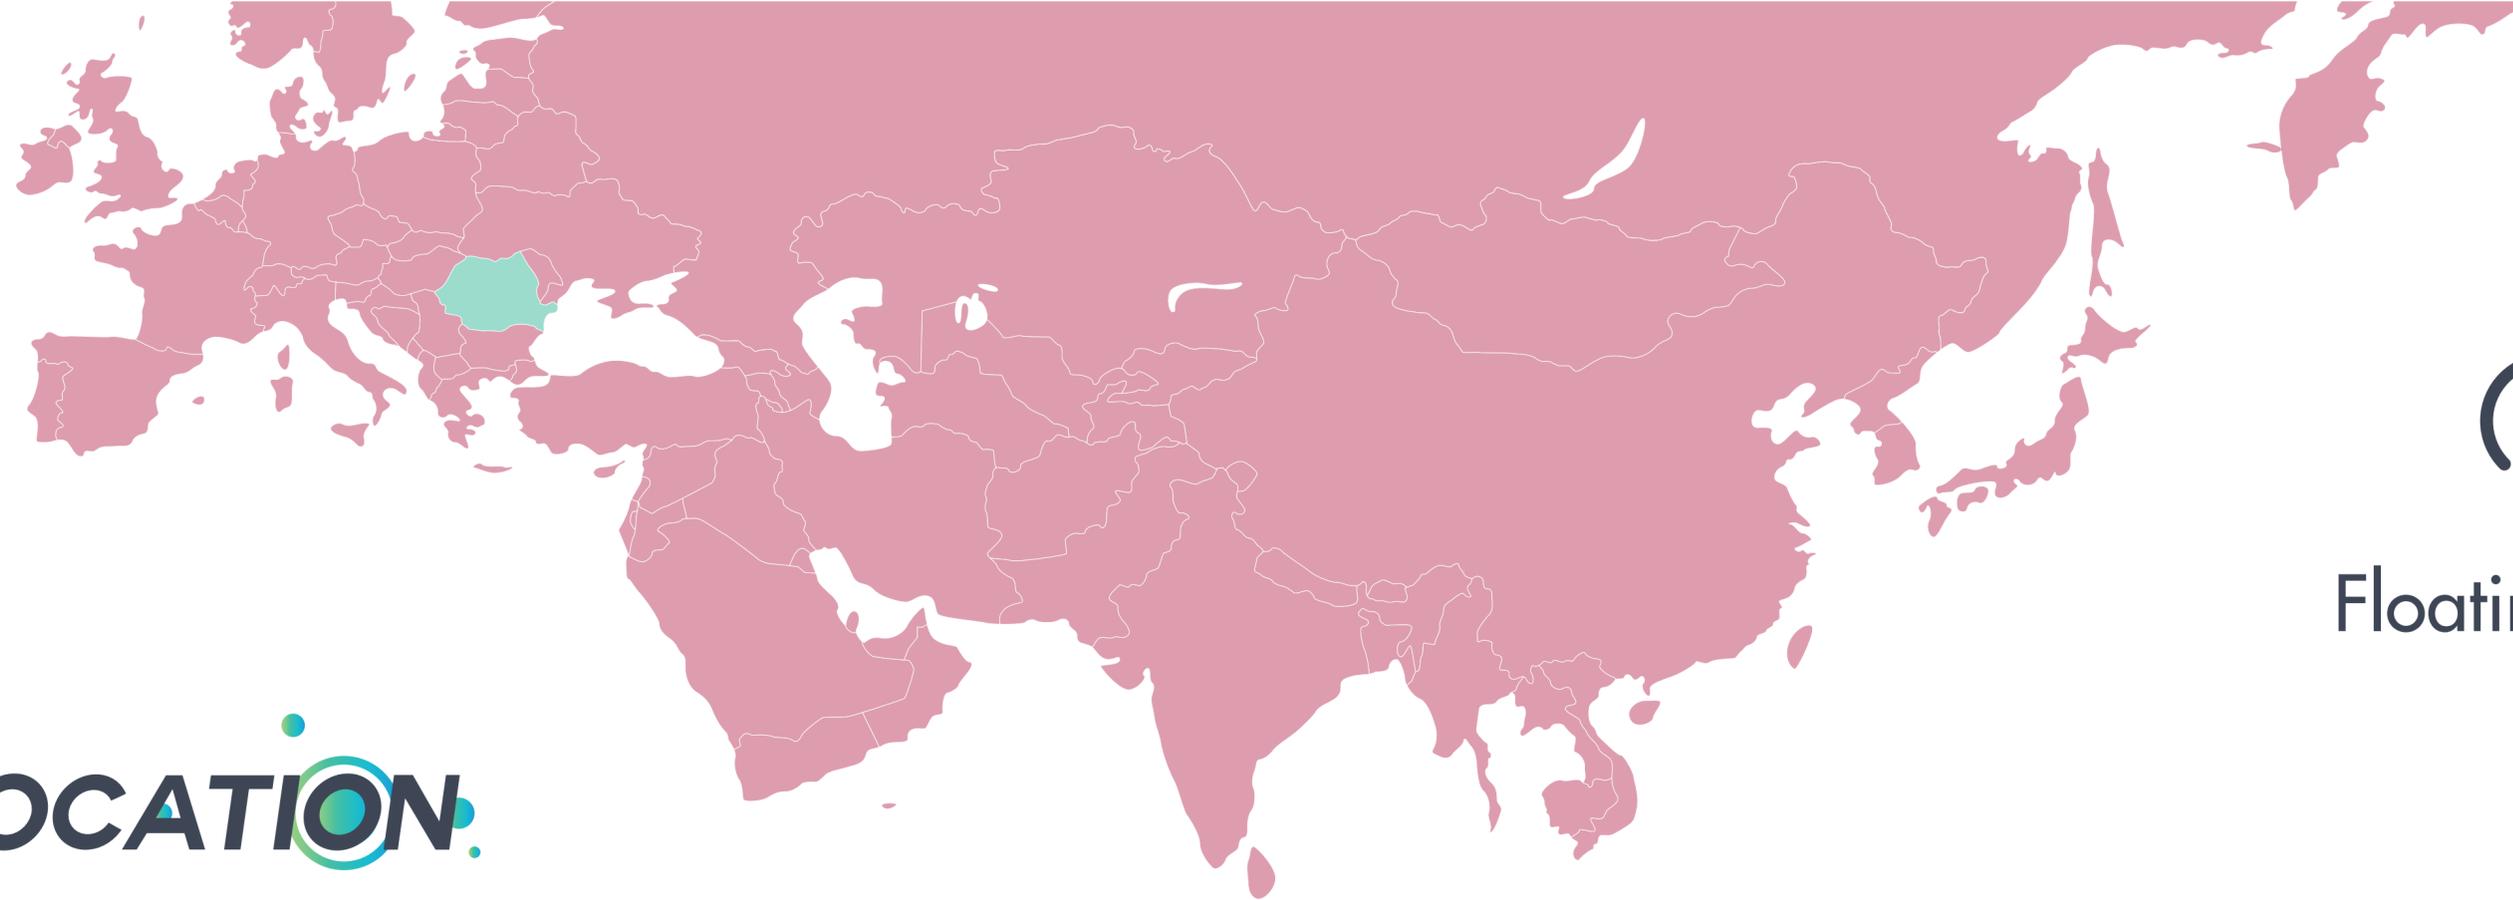

The release candidate is monitored to identify potential issues or weaknesses.

MAINTENANCE AND SUPPORT

The maintenance and support of software products is done by our competent and skilled engineers.

Whether it's code reviews, product support, or system upgrades and improvements, our team will be an **effective resource to help our clients maximize return on investment and improve their business processes.**

FloatingDots

LOCATION.

Heart of Transylvania, city of Cluj-Napoca, Romania

Romania is a hidden gem when it comes to offshore outsourcing. As one of the leading IT markets in Eastern Europe, the country attracts through its dynamic business climate and skilled tech workforce.

Cluj-Napoca is the “heart of Transylvania” and was considered for a long time the unofficial capital of the Transylvania region.

Lately, Cluj-Napoca changed its nickname to “Silicon Valley of Eastern Europe.”

Why? Because right now, more than 20,000 people work in the local IT sector, and the city is home to nearly 1,300 IT businesses.

Highly regarded engineering universities, very dynamic business sector, proximity to Western Europe and membership in the European Union, combined with relatively affordable workforce salaries,

make Cluj-Napoca, an attractive destination for IT outsourcing.

Also, regional technology clusters started to surface. Their main purpose is to promote innovation in processes, design of products and services to increase competitiveness at international level. Floating Dots is part of the Transylvania Industries Cluster—the first in Romania.
