Increase your efficiency!

- You can take control of your budget:
It helps with healthy budgeting by enabling the monitoring of costs for breakdowns, maintenance, calibration, or other tasks.
- You can manage information easier:
By enabling access to documents such as handbooks, guides, pictures, and device technical specifications, it makes accessing and sharing information easier. Thus, it ensures that information is unified.
- You can speed up your tasks with user-friendly screens:
The use of a single-page web application interface and customizable launch screens according to user roles makes it easier to use. It speeds up access to the desired screens and allows working on multiple screens simultaneously.
- You can manage your tasks in accordance with processes:
It ensures controlled execution of tasks in line with defined procedures. It provides the ability to monitor how the procedure steps are followed.
- You can measure workforce efficiency:
It increases efficiency by enabling the evaluation of the working performance of technical staff and the compliance of subcontractor companies with the contract.

Manage your work orders easily!

- It ensures control of your workflow from start to finish.
- Displays the history of work orders.
- Automatically calculates work costs.
- Enables detailed planning and tracking of unassigned tasks.
- Creates work orders from work requests.
- Stores files related to the work orders.
- Prepares Maintenance and Calibration certificates.
