

**Digitalize Your Production  
with EMKO Elektronik**

With 100% domestic capital, it has been carrying out the design, production, marketing and pre-sales and after-sales technical services of Operator Panels, PLC, Measurement Control Devices, Temperature and Humidity Sensors, Remote Monitoring Software, Generator Control Devices since 1986.

# Domestic Dealer Network

# Foreign Dealers and Brand Registrations

# Quality Certificates

TSE-ISO-EN9001

CE Certificate

# Digital Transformation

## Digital Factory ?

It refers to the integrated operation of machines and production management systems. It is the MONITORING, REPORTING and CONTROL of production or management processes in processes instantly, locally or from anywhere in the world.

Real-Time Process  
Monitoring  
Retrospective Monitoring  
and Reporting Management of  
Production Values Consumption Values  
Energy Management  
Failure Notifications  
Production Stops Work Orders  
Management/Planning Quality  
Management  
Alarms...

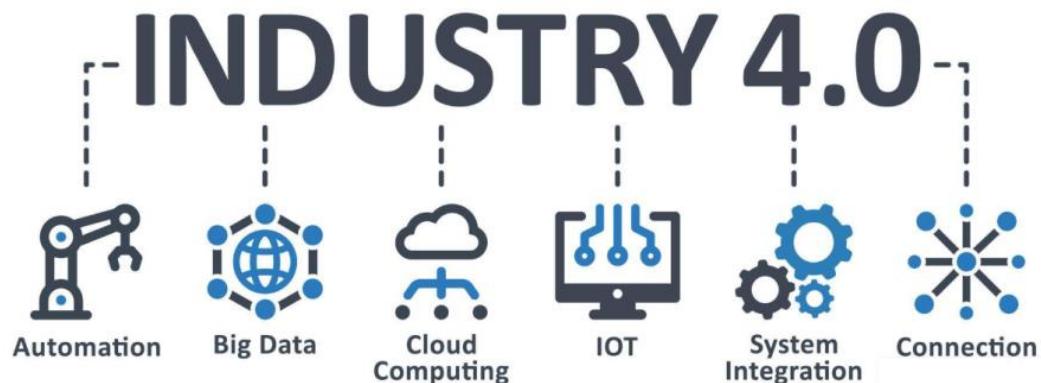

# The Purpose of Digital Transformation

## With Digital Transformation,

Collection of all input parameters in Production, Management, Quality processes in a digital environment. In this way, by analyzing the data, KPIs and Basic Performance Indicators are obtained, qualified process management is ensured and efficiency is increased at every point.

## Purpose of Digital Transformation?

- Reducing Costs Increasing
- Performance Increasing Capacity
- Recording Processes
- Increasing Quality and Making It Stable....

# ERP and MES System Integration

In all this digitalization effort, ERP software and MES System Integration appear as an important process..

## EMKO PROOP HMI Panels IPERTU PLC and Analog

Provides integration of ERP and MES systems and enables IOT transformation.

# Digital Transformation Examples

Thanks to the e-mail sending feature, your process is closer to you. Thanks to the MQTT protocol, remote access to process values is facilitated. With HMI Panel; You can send alarm conditions, Process and consumption values by e-mail.

Thanks to the VNC remote desktop feature, the HMI Panel screen can be viewed from a PC or Mobile over a local network or the internet. Thus, real-time monitoring, control, and reporting can be done from anywhere.

# EMKO – Digital Transformation

EMKO  
Web Management

Remote Monitoring and Control with EMKO  
Generator Control Devices from anywhere in the  
world with EMKO Web Management

The image shows a screenshot of the EMKO Web Management interface. On the left, there is a 'Kullanıcı Giriş'i (User Login) form with fields for 'Kullanıcı Adı' (Username) and 'Şifre' (Password), and a checkbox for accepting the 'Emko Elektronik KVKK Politikasını okudum, anladım, kabul ediyorum.' (I have read, understood, and accepted the Emko Elektronik KVKK Policy). Below the form is a 'Giriş Yap' (Log In) button. To the right of the login form is a section for forgotten passwords ('Şifrenizi mi unuttunuz?'). At the bottom of the left panel are download links for 'Google play' and 'App Store'. On the right side of the interface, there is a large advertisement for the 'Trans-Mobile' mobile application. It features three smartphones displaying the app's interface against a background of the Earth. The text 'Mobil uygulama yayında' (Mobile application available) and 'Jeneratör kontrol cihazları mobil uygulaması android markette.' (Generator control devices mobile application available on the android market) is displayed. The overall background of the interface is a stylized image of the Earth and clouds.

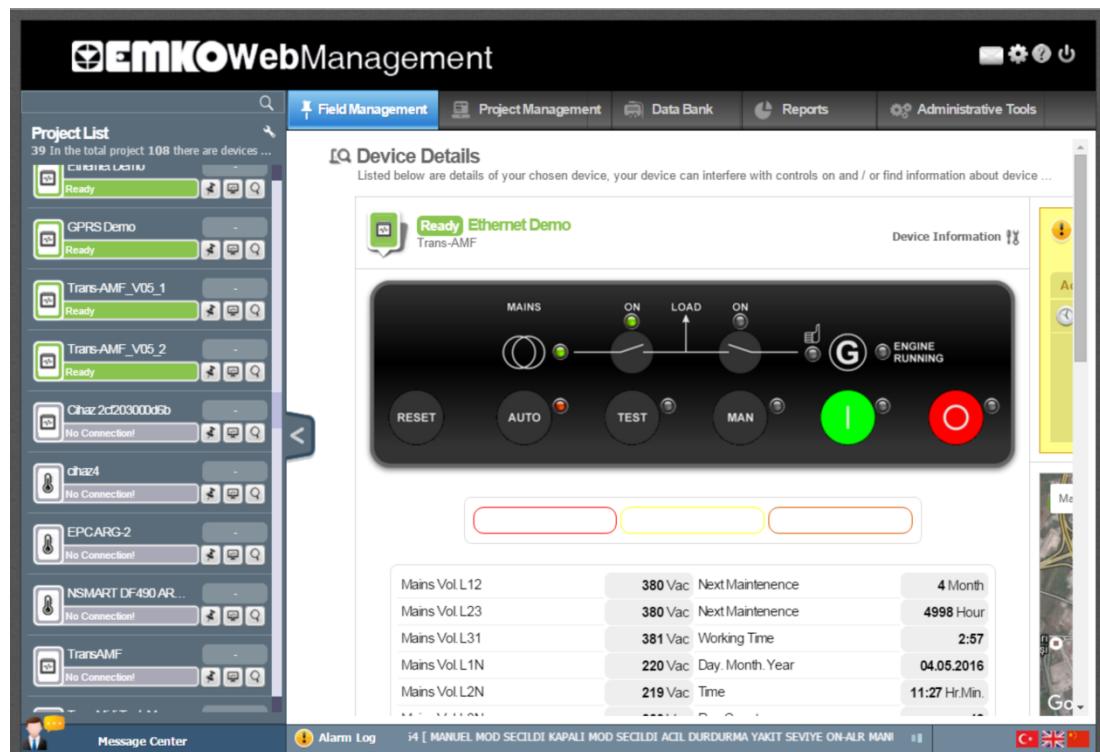

In the bank project with over 1000 branches, the controls of the branches' generators were carried out with TRANS-AMF. The data received from TRANS-AMF is monitored, managed and reported remotely with WEB Scada software. In case of alarm, the system informs the relevant units via SMS/Mail.

# EMKO – Digital Transformation

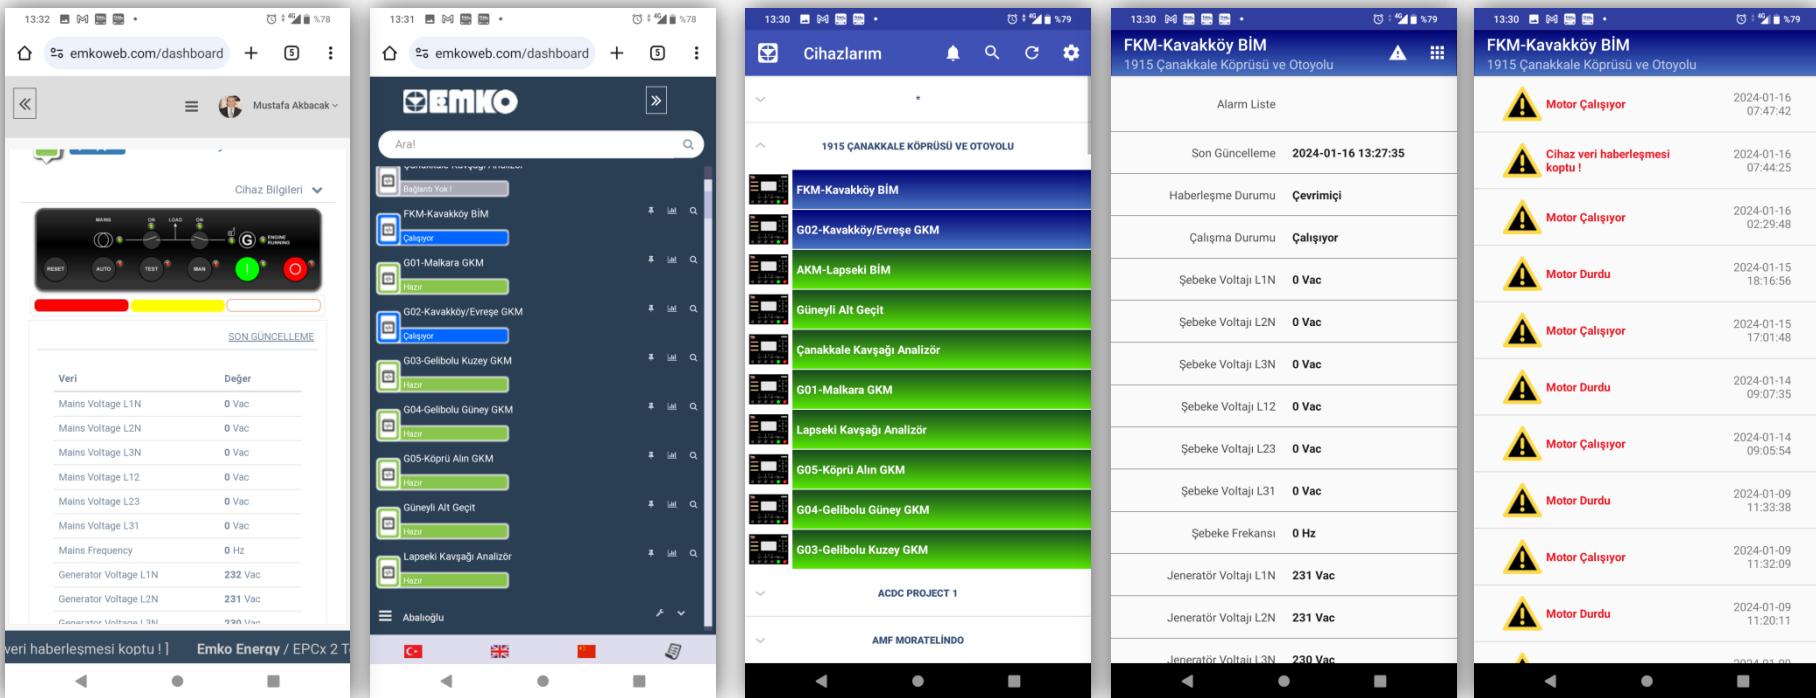

EMKO  
Web Management

With this digital transformation, GENERATOR via EMKO Web Management;

GENERATOR Remote Monitoring /  
Operation,  
Monitoring Network Values ,  
Monitoring Generator Values,  
SMS/Mail in Alarm Situations,  
Fuel Level, Temperature  
Information,  
Fault Status Information,  
Fuel Reporting, Analysis,  
Recording of processes,  
Working Hours Data  
ReportingProvided.

## GENERATOR Remote Monitoring and Control- Mobile Application

Predictive Maintenance activities are carried out by analyzing the data received in alarm situations and their frequency of occurrence. In this way, the efficiency of labor and infrastructure performance can be continuously improved. For example; There may be a problem with the starter of a generator that frequently fails to start.

İzleme Uygulaması

Thanks to the EPC-T10 control device used in poultry farming and EMKO Web Management, all data and alarms received from the coop can be monitored instantly and controlled remotely. In the project we carried out with the leading company in the sector, the system informs both the caretaker and the veterinarian in case of alarms, and the collected data is used to improve efficiency.

In this application, the number of animals in the coop, their weight, the amount of feed, water and energy consumed can be compared with the data collected in the SQL database and the KG cost of the animals can be calculated. Thus, in the ERP system where each breeding stage is monitored, efficiency improvement is achieved in the next animal circulation in the coop.

With the digital transformation of the system, real-time notifications can be received with the Proop HMI - MQTT protocol, retrospective monitoring, reporting can be done from mobile and PC. In case of a problem with the Internet, alarm information is sent via SMS.

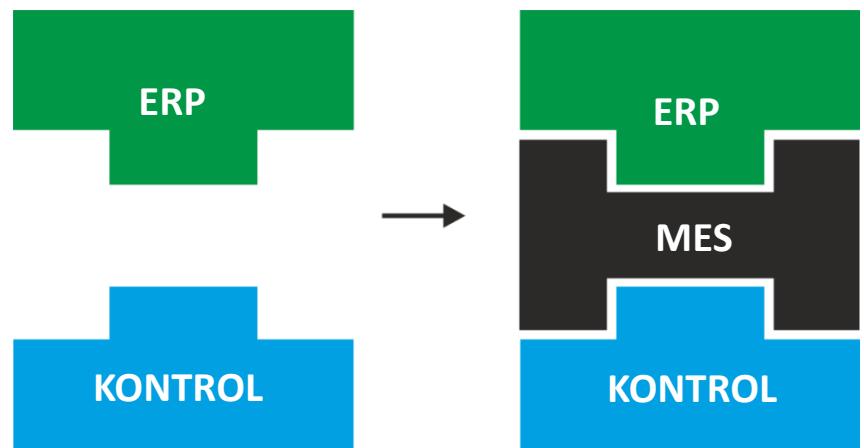

# ERP – MES System Integration

# ERP and MES System Integration

In order to realize digital transformation, ERP and MES Integration is an important step

In all this digital transformation process, EMKO HMI Panels, PLCs, Analog Modules, Measurement Control Devices and Sensors form the HARDWARE part of ERP software in the production area with their infrastructure compatible with MES systems in processes such as control, data collection and reporting.

# EMKO ERP-MES Integration

As EMKO Elektronik, we started our first digital transformation from our own factory...

With PROOP HMI Panels used in the production department and integrated with the ERP software, the test and calibration processes in production are recorded in the SQL database, and quality, production performance analysis and improvement are provided via ERP.

# EMKO ERP-MES Integration

Not only the production system, but also the company's lighting and ventilation systems are controlled via EMKO HMI panel and IPERTU Digital and Analog modules, and all kinds of reporting can be obtained by recording consumption and working hour data in the SQL database.

# EMKO ERP-MES Integration

Proop HMI - Digital lighting system panel that can be controlled with VNC remote desktop feature...

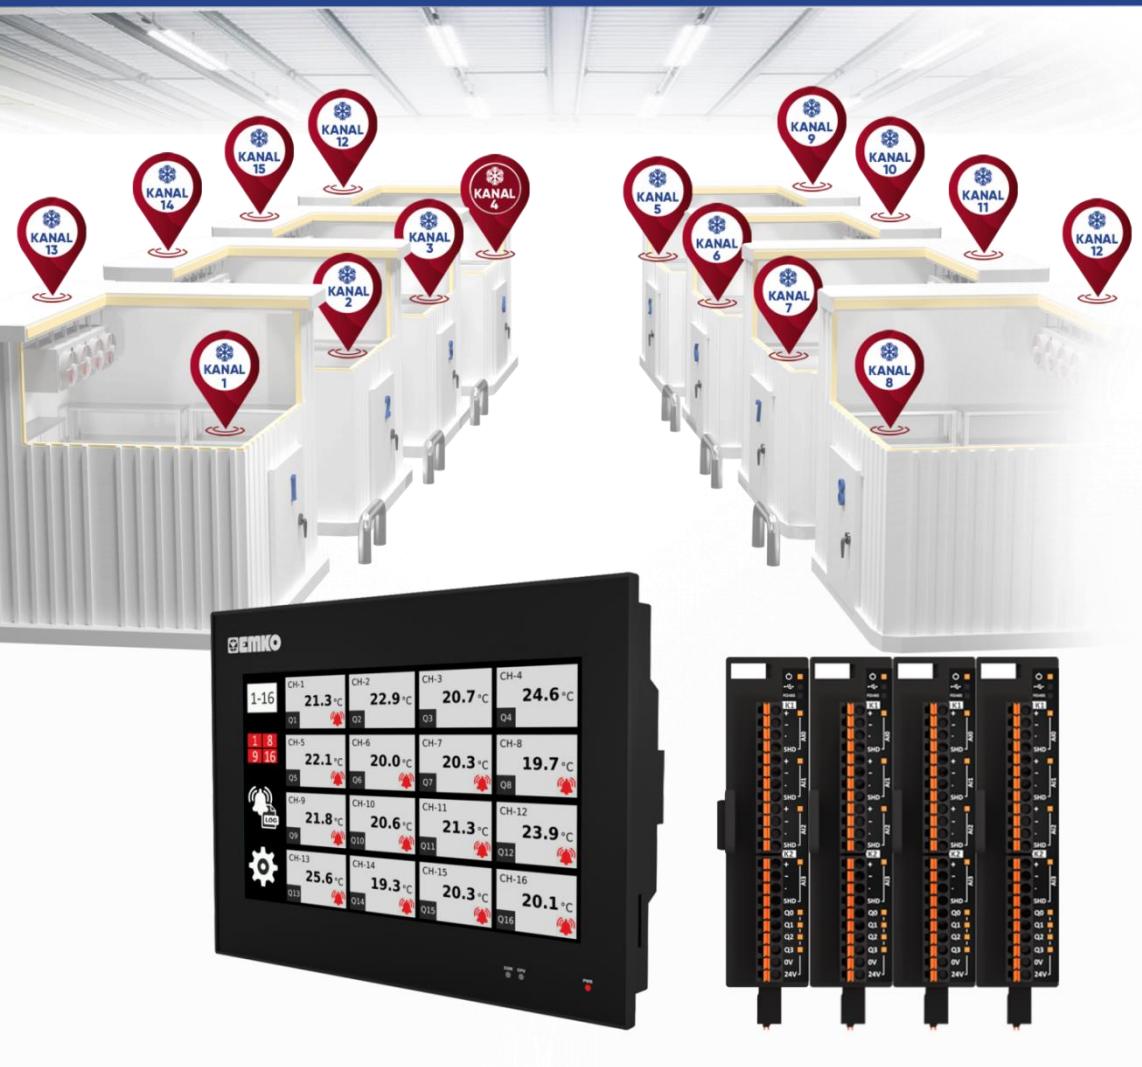

# EMKO ERP-MES Integration

**16 Zone Humidity, TemperatureControl and MonitoringHUMIDITY and TEMPERATURE control and data collection application with IPERTU Analog modules. With the ModBus TCP-IP feature of the EMKO HMI panel, remote control and real-time graphics process values can be monitored. In addition, process values, alarms, energy consumption data are recorded and reported.**

# EMKO ERP-MES Integration

All this data is recorded in the SQL database, allowing for ; Cost Analysis , Capacity Increase, Quality process management to be performed via ERP.

# EMKO ERP-MES Integration

## Water Filling Application via IPERTU PLC;

The purpose is to perform tank level management, Demijohn disinfection, Filling processes. Production quantity information, Energy consumption information, Production line stoppages, Fault, maintenance information reporting is provided.

# EMKO ERP-MES Integration

This process works integrated with other smart production and warehouse systems with digital transformation. (IOT - communication between production units) For example; Automatic provision of information to the warehouse unit about the amount of demijohns decreasing in production. With the information received from the field, efficiency is increased in production processes and capacity management. Cost analyses are performed. An increase in quality and performance values is observed.

We design, We produce...
