ALUMINUM PROFILES

INDUSTRIAL PROFILES

Aluminium Profiles

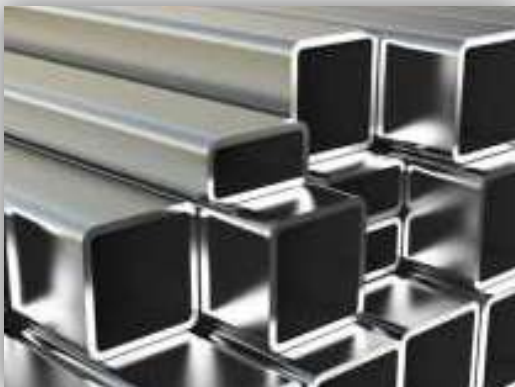

Standard Profiles

Profiles that are produced in various shapes and sizes, are easy to assemble and do not require maintenance for many years.

Handrail Profiles

It is applied to provide security and aesthetics in parts of buildings such as balconies, stairs and terraces.

Box Profiles

Profiles used in construction, machinery and architectural sectors due to their high corrosion resistance and easy shaping.

Flat Profiles

It is used in industrial applications such as machinery, defense, automotive, advertising and construction industry.

C60 Profiles

Profiles without thermal insulation that can be applied as an alternative to Aldoks Profile systems in doors, windows and workplaces.

Industrial Profiles

Profiles produced for the needs of industrial companies from automotive to household appliances. Its most prominent features are its effectiveness against corrosion, lightness and durability.

Ceramic Profiles

It is used to prevent liquid flow from the edge of the ceramic surface, to prevent deterioration such as swelling or cracking, and to obtain a decorative appearance.

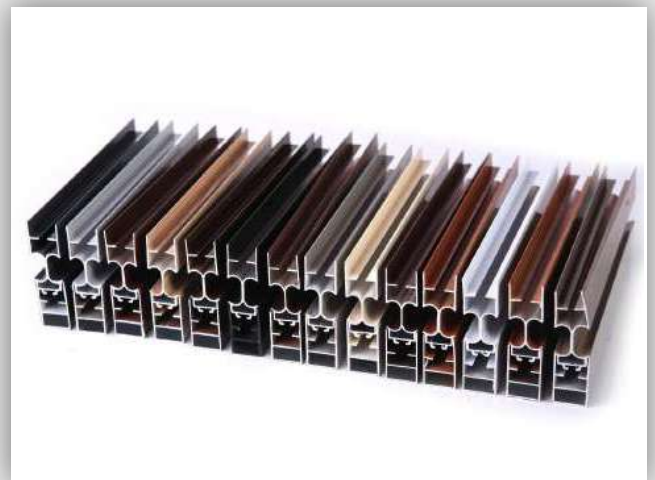

Billboard Profiles

It is used in billboards made of aluminium material.

Shower Cabin Profiles

The shower cabin profiles, which act as a frame, are light and durable.

Insect Screen profiles

It is produced for the frame system most used in mosquito nets in terms of being long-lasting, aesthetic and functional.

ALUMINIUM SYSTEMS

**DOOR AND WINDOW
SYSTEMS**

SLIDING SYSTEMS

**FACADE AND LIGHTING
SYSTEMS**

**CUBICAL OFFICE
SYSTEMS**

SUNSHADE SYSTEMS

Door and Window Systems

Insulated Door and Window Systems

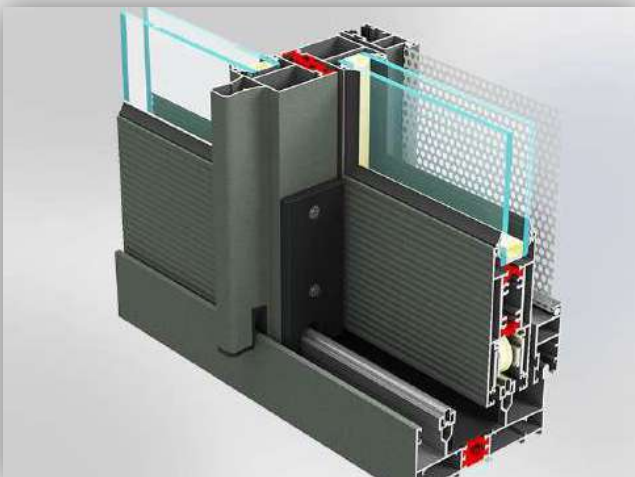

It is a profile system that provides heat and sound insulation, especially in regions with high temperature variability.

Uninsulated Door and Window Systems

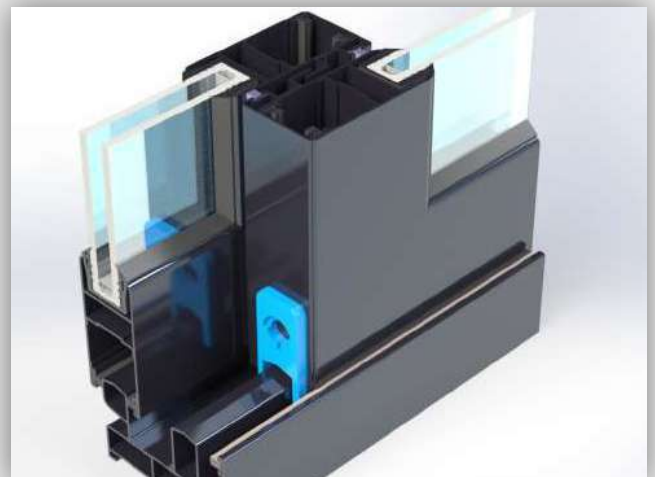

Economic door and window series for especially hot climates that all colours can be applied by its architectural aesthetics

Sliding Systems

Insulated Sliding

With the EPDM gaskets, it provides maximum air and water insulation and has a wide usage area.

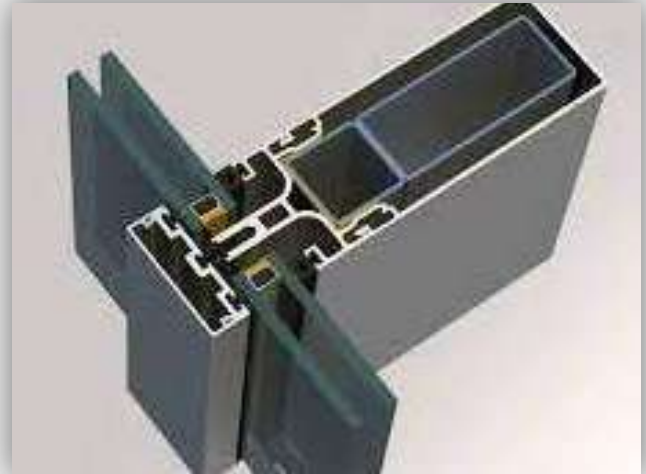

Uninsulated Sliding

It is a non-heat-insulated, decorative-looking sliding door and window joinery system.

Skylight Systems

It is generally used for steel carrier surfaces. It has a design that can throw out the condensation water that may occur in the system and on the inner glass surface.

Steel Reinforced Facade Systems

Preferred system in some areas which are wide and require a large space. It features covered and silicone facade.

Highly Insulated Curtain Wall Systems

The new generation curtain wall system that combines capped, two sided and four sided silicone curtain wall in a single system.

Classic Facade Cladding Systems

It is used in areas such as covered facade, silicone jointed glass facade, semi-covered facade, outward reverse transom applications.

Cubical Office Systems

Glass to Glass Office Partition

It is a glass-to-glass office partition system. It consists of aluminium ceiling, wall and floor profiles.

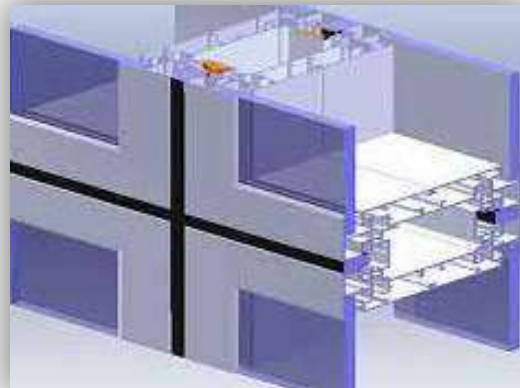

Covered Partition

Two different wall thicknesses, 83 mm and 105 mm, can be applied. It ensures that many needs are met in hospitals, shops, hotels, office-office, management floors.

Framed Office Partition

It has the appearance of framed glass assembled in a factory environment. We can add features such as shelves, cabinets, hangers on the wall.

Silicone Office Partition

Prefabricated mono-block units with a frameless glass appearance by gluing the glass on a hidden aluminium frame with a special tape with very high UV resistance.

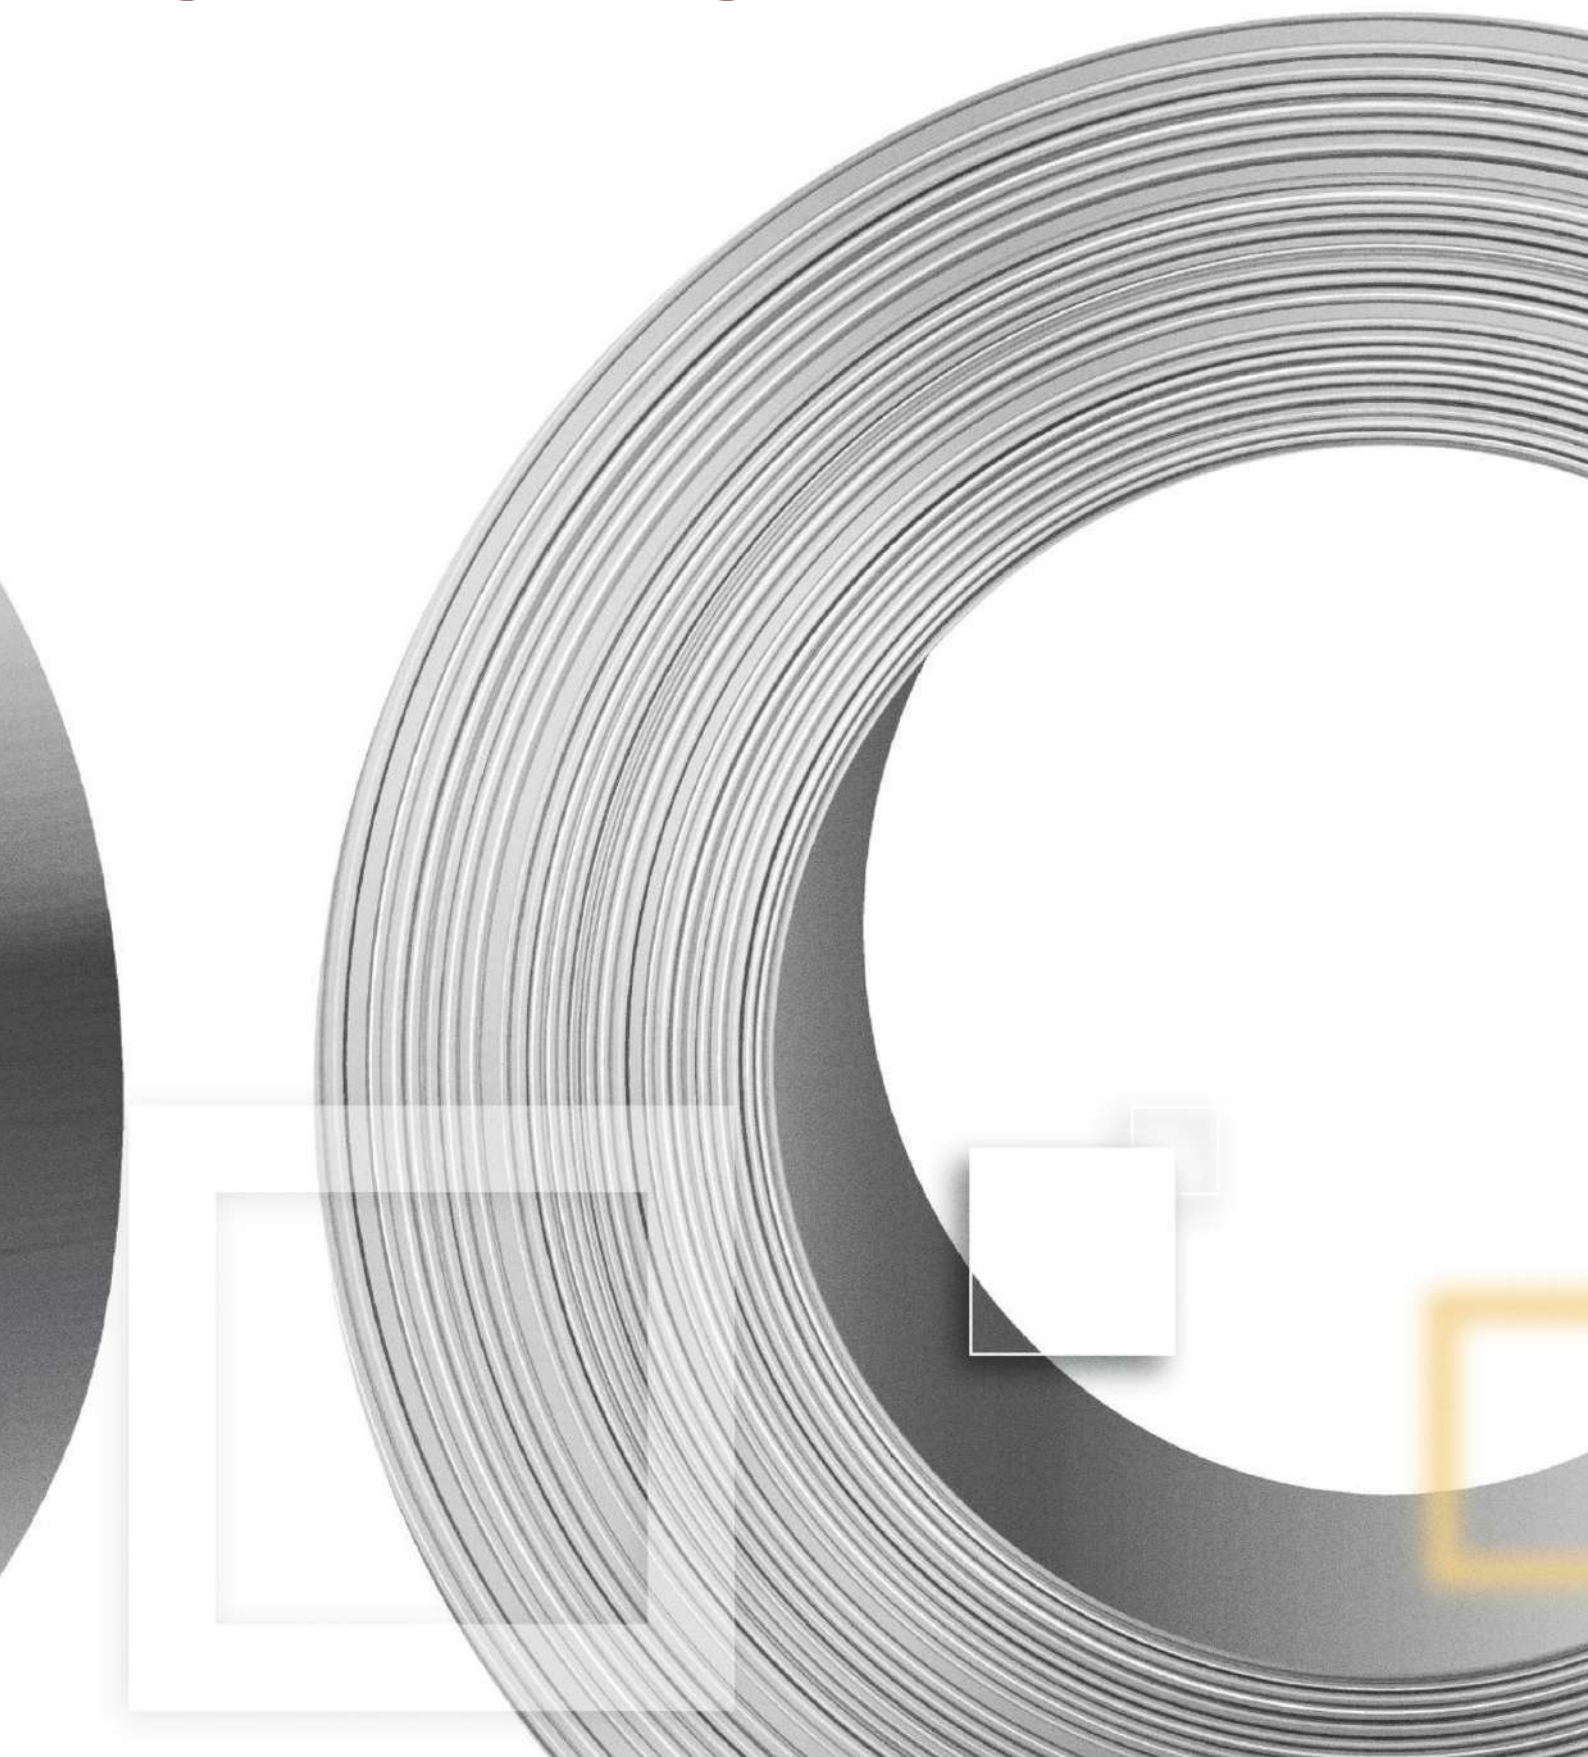

Sunshade Systems

Sunshade Systems

It is designed to control daylight in buildings. The applications that allow enough light to enter the space.

ALUMINIUM SHEETS

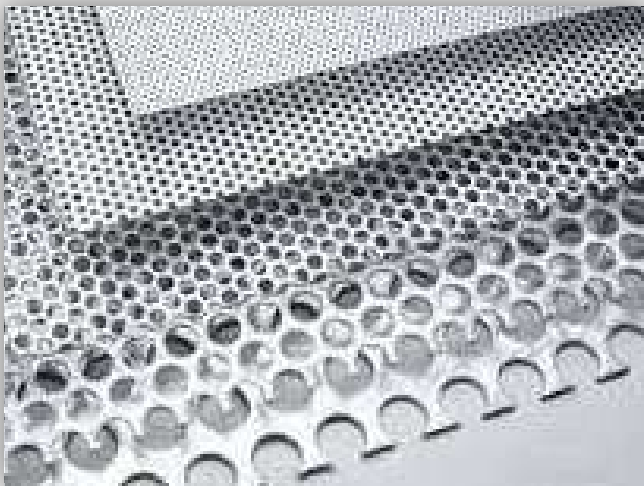

Aluminium Sheets

High performance for welding properties and corrosion resistance. The anodized version is especially used in the construction, architecture and machinery sectors.

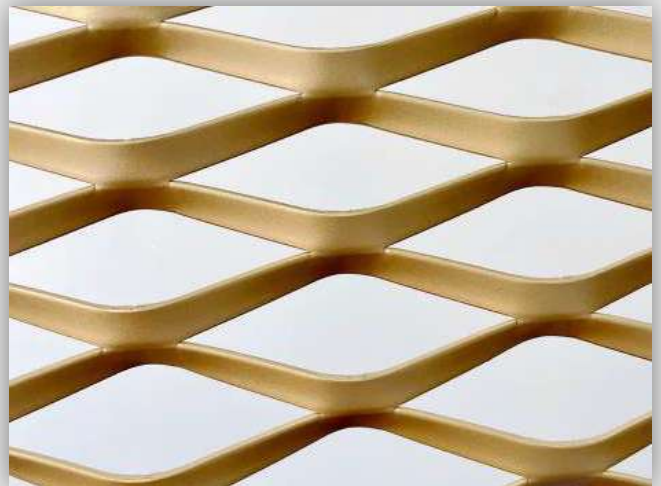

Composite Panels

Lightness, aesthetic appearance, fast and easy assembly, high sound and heat insulation, wide variety of colors and flexible project applicability are the most prominent features.

Perforated Sheets

Perforated sheets, which can be produced in different patterns, mesh sizes and thicknesses, can be used in many sectors.

Expanded Sheets

It is produced by expanding, it is used on glass facades, exterior surfaces and interiors.

With the assurance of

Guaranteepeak...

We are here to assist you with any problems you may encounter during material procurement (such as incorrect material selection), technical issues during machine operation (production-related problems), and project-related issues (if the product or service is incomplete or faulty).

ACCESSORIES

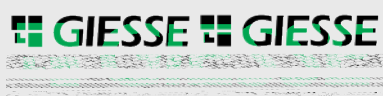

The image displays four silver-colored metal accessories for a treadmill, arranged on a dark blue textured surface. The accessories include a handrail bracket with a black cap, a console bracket with a black cap, a handrail cap, and a console cap. The word "ACCESSORIES" is written in large, white, bold, sans-serif capital letters across the top of the image. In the bottom right corner, there is a small yellow square graphic.

ACCESSORIES

Accessories such as door window handles, facade trusses, door window hinges, lock types. They are corrosion resistant and lightweight products.

IRON PROFILES

Box Profiles

It is generally used as a building element in the construction industry. Also, it is used in the automotive, furniture and machinery industry.

L Profiles

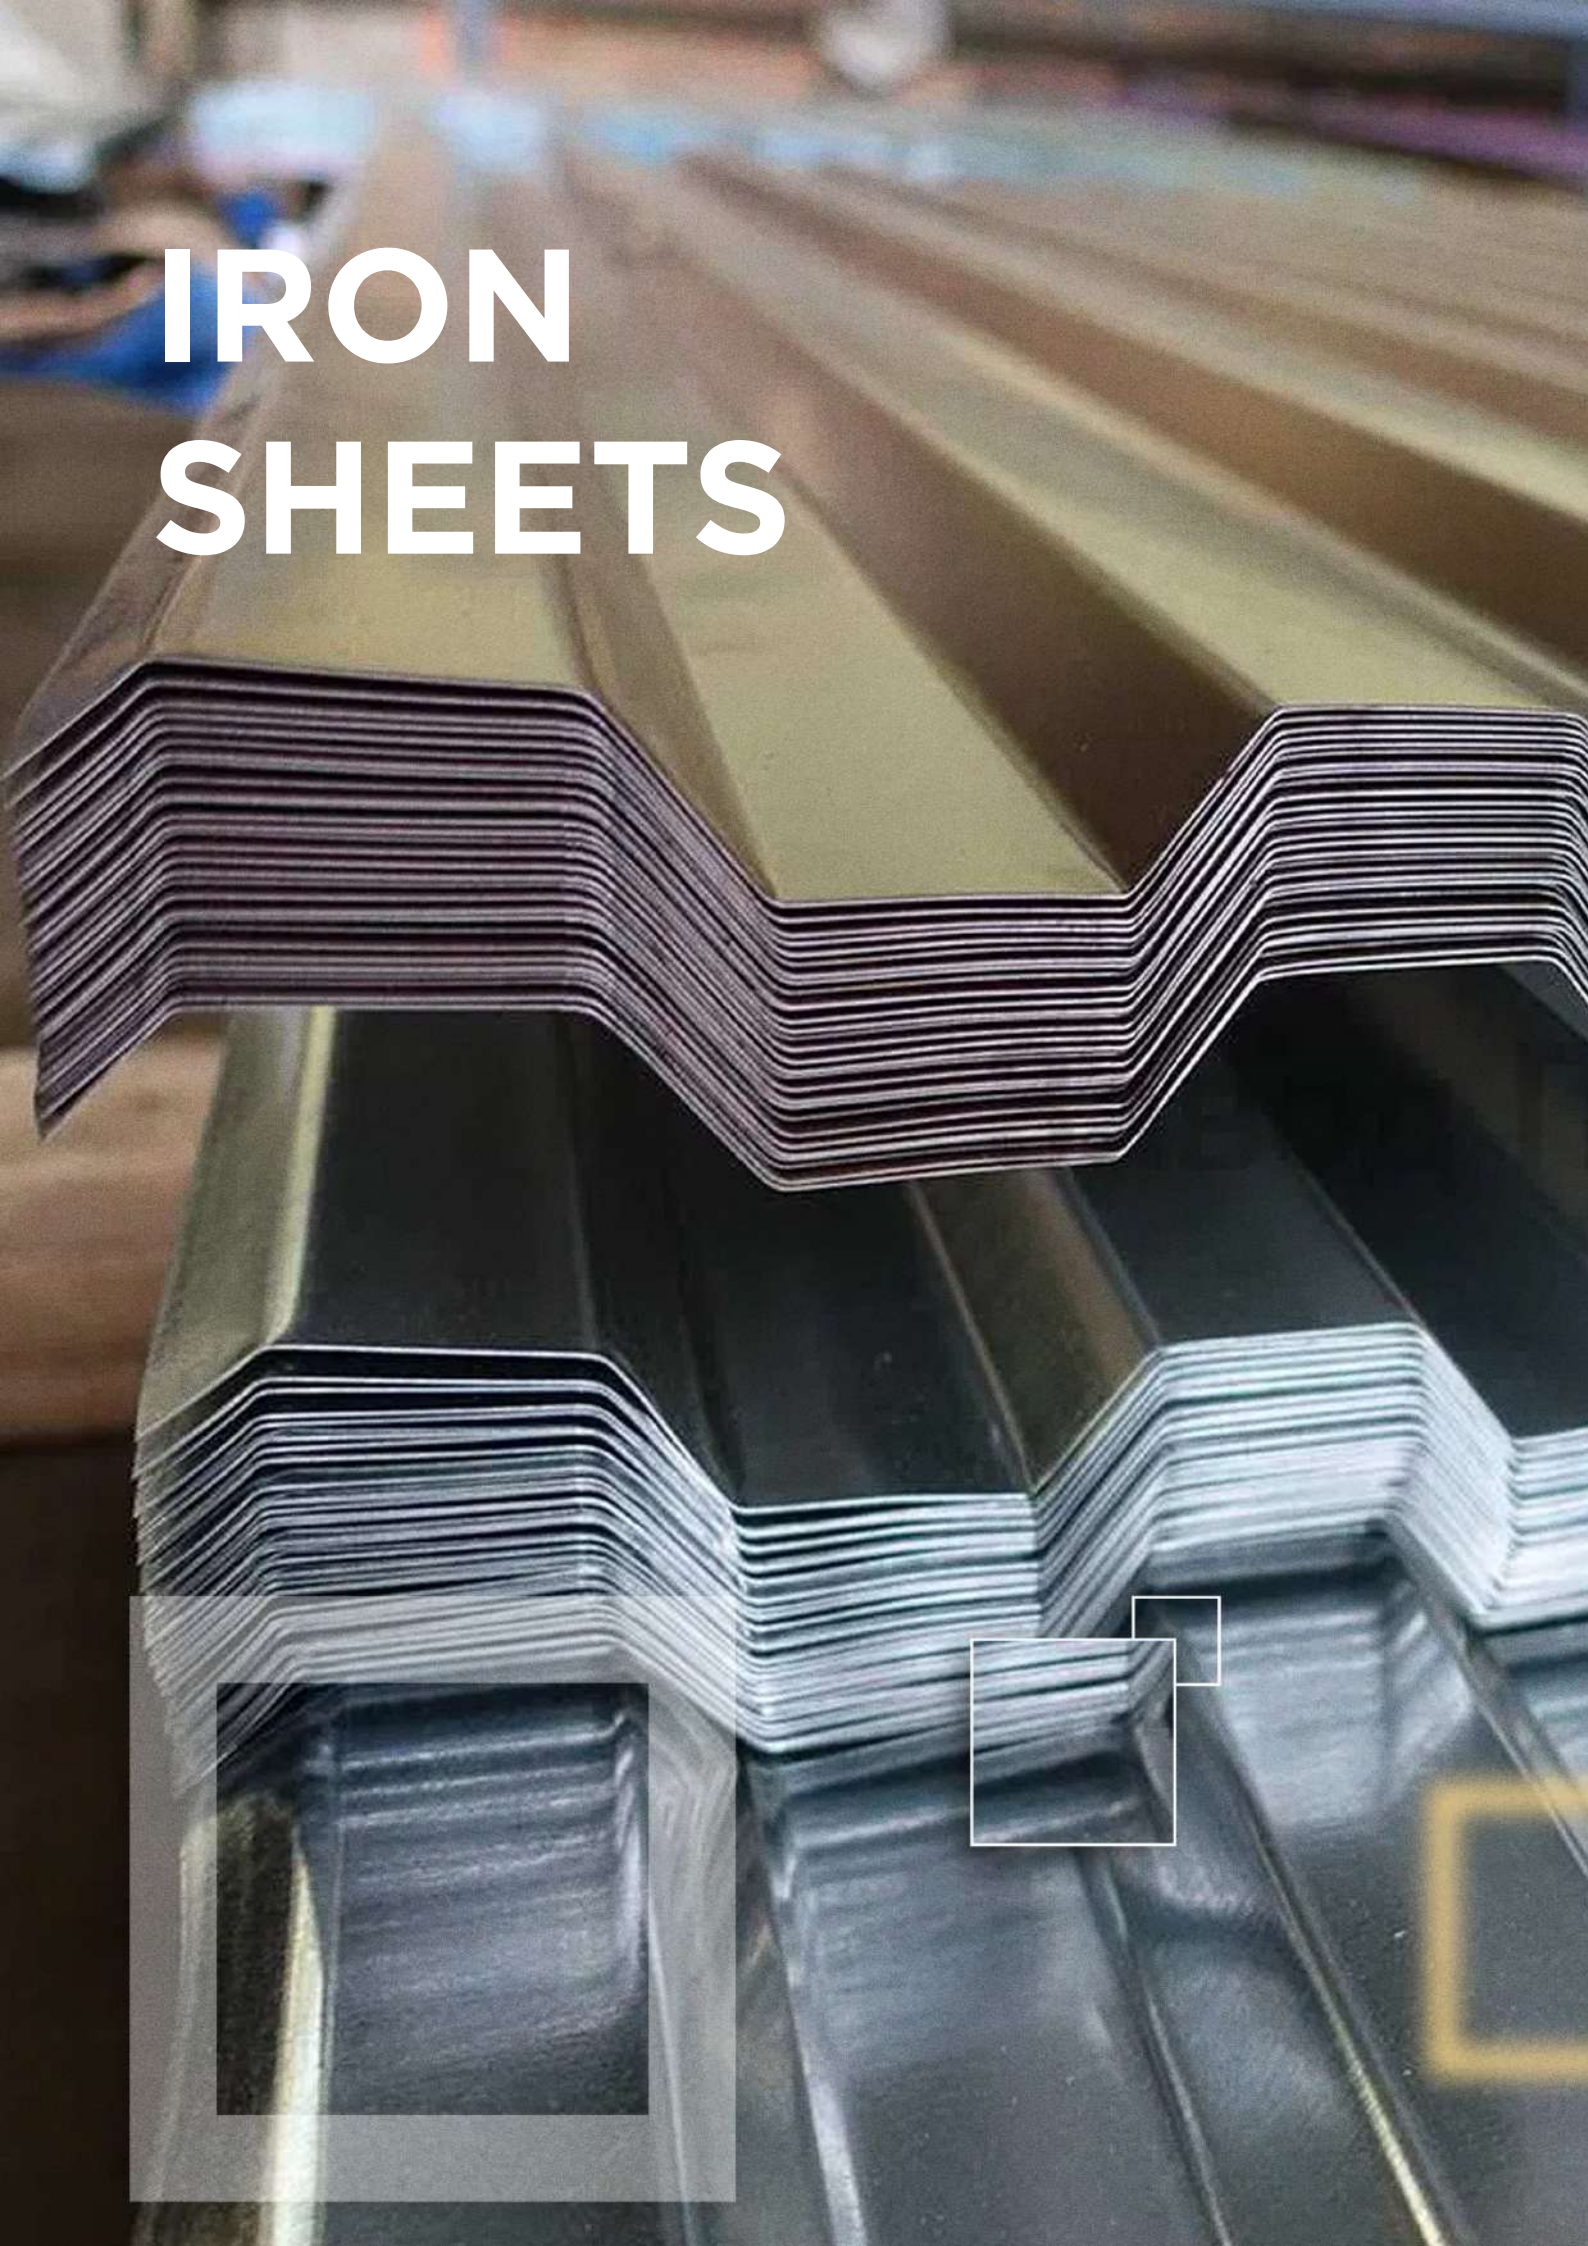

L profiles, which have a wide usage area, are produced in different sizes and wall thicknesses.

Flat Profiles

Flat profiles, which stand out with their durability, are used in many fields.

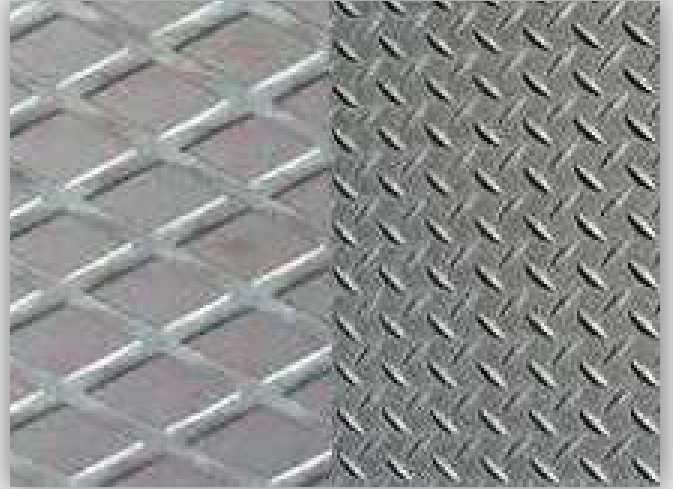

IRON SHEETS

Sheet

Iron sheets, which have a widespread use in the building industry, are durable and useful.

Processed Sheet

It is obtained by embossing the pattern on the surface of the mild steel sheet. With the patterns on its surface, the sheet strength becomes higher.

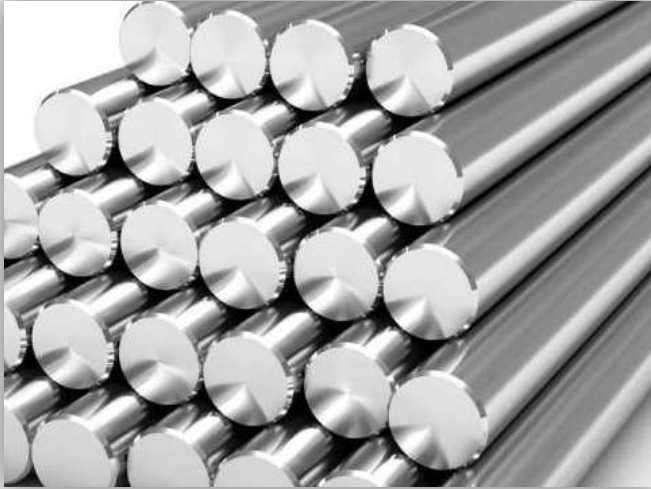

Wire Mesh and Expanded Sheet

Iron fence of different quality and durability, which can be produced in various thicknesses and mesh sizes.

It is a metal sheet made into a expanded structure of the metal product processed by the expansion method.

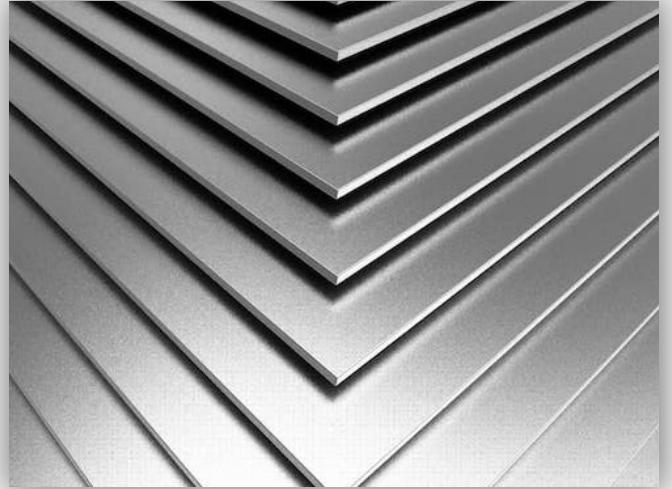

STAINLESS STEEL

Stainless Steel Bars

It is produced from a mixture of chrome and nickel. It has a durable structure, its appearance is modern and decorative.

Stainless Steel Plates

It is used where low maintenance and corrosion resistance is required. It is used in a variety of applications, from modern architecture to the food hygiene industry.

Stainless Steel Profiles

It is resistant to adverse conditions and corrosion, cuts off contact with air. It is preferred because it is not affected by external factors and because of its durability.
