

Thermal Anchor "LEMP Classic"

Thermal Anchor "LEMP Multi"

Thermal Anchors

Eliminate energy loss effortlessly with LEMP thermal anchor sets—the smart solution for mounting M10 pipe clamps directly into insulation without forming thermal bridges. Thanks to an integrated cutter tip, installation is fast and clean, completely eliminating the need for pre-drilling.

Designed for total versatility across insulation depths, the LEMP Classic handles thicknesses from 10 cm, while the compact LEMP Multi adapts to insulation depths as thin as 6 cm. For maximum job-site efficiency, our proprietary combination bit lets installers drive both the thermal anchor and hanger bolt seamlessly without swapping tool bits.

To streamline procurement and installation, we also offer complete pipe clamp mounting sets—conveniently packaged with 10 premium pipe clamps and all matching mounting material included.

Pipe Clamp Mounting Set

Satellite Dish Mounts

Ensure crystal-clear reception with LEMP satellite dish mounts—engineered for maximum stability and effortless roof installation. Featuring an innovative, problem-solving design, our mounts enable hassle-free, single-person assembly without requiring any roof penetration.

Designed to adapt flexibly to any project, they adjust infinitely across all roof pitches. Tested and certified by the German Technical Inspection Authority (TÜV), our multi-SAT solutions offer exceptional stability in any position. Finished with high-quality hot-dip galvanizing, they provide long-lasting corrosion resistance to withstand the toughest weather conditions year after year.

Roof Batten Extensions

Effortlessly extend verge overhangs on sloping roofs with LEMP roof batten extensions—the ideal solution for refurbishments and exterior insulation upgrades. Designed to adjust roof overhangs cleanly without exposing entire rafter fields or requiring costly structural rework, they save both time and job-site labor.

Crafted exclusively from high-grade galvanized steel, our roof batten extensions deliver structurally tested reliability built to withstand demanding loads. To guarantee complete peace of mind, LEMP provides a complimentary calculation and structural analysis service tailored to your project's specific regional requirements.
