

# OPTHYSOURCE Presentation

Théophile PAUL

*Phd, Eng Electrical Engineering*

# I. Observations

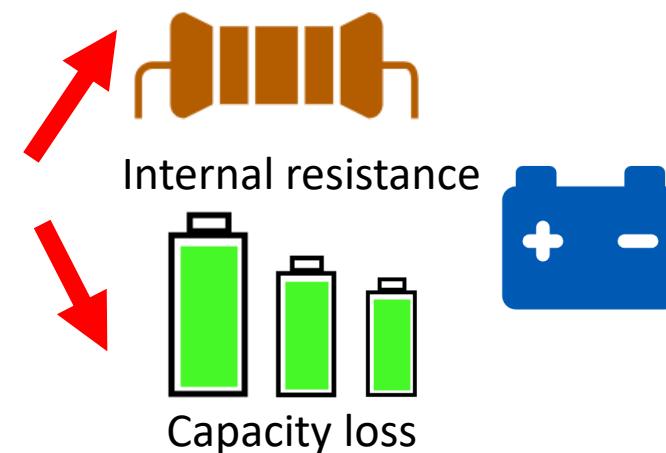

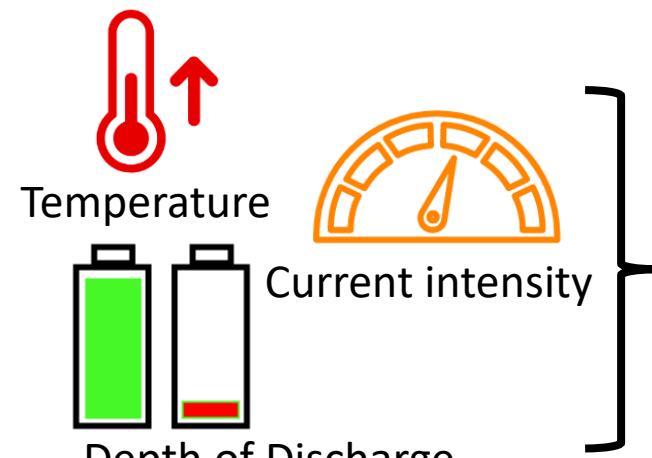

**Observation 1 :** Power requested (power peaks) decrease battery lifetime – ecological and durability issues

Temperature

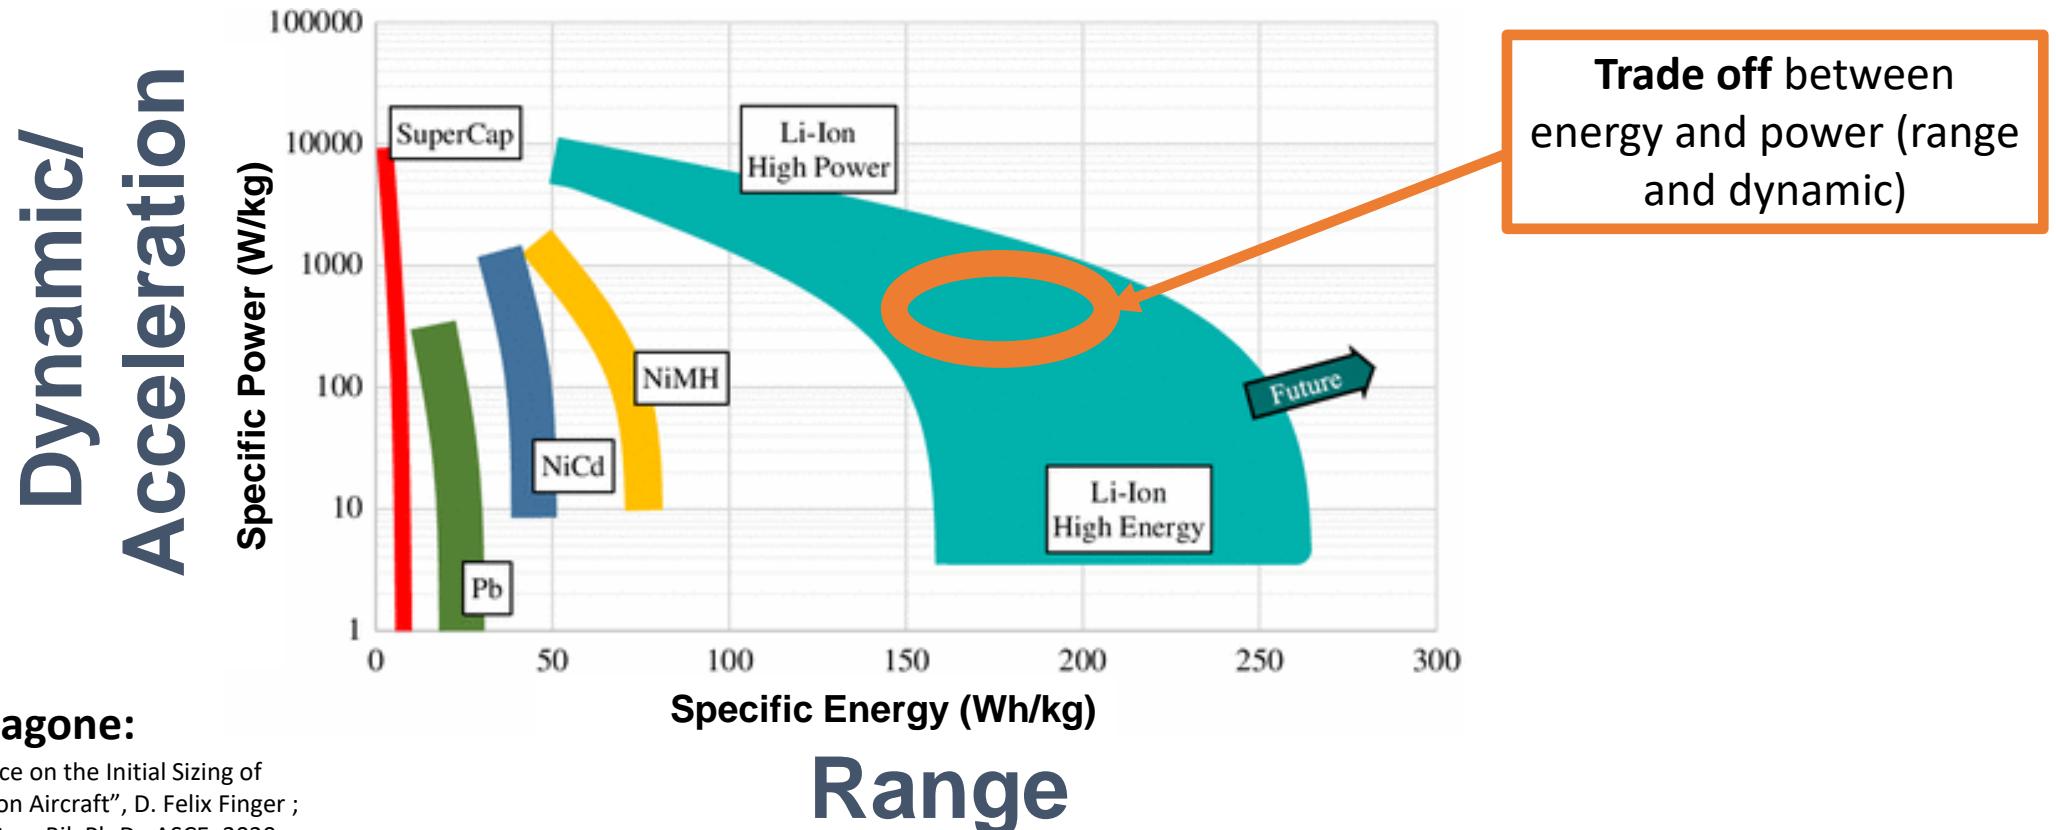

Battery lifetime

→ Issue:  
The acceleration of the battery ageing

# I. Observations

**Observation 2 : Li-ion Battery isn't simultaneously efficient in power and energy**

# I. Observations

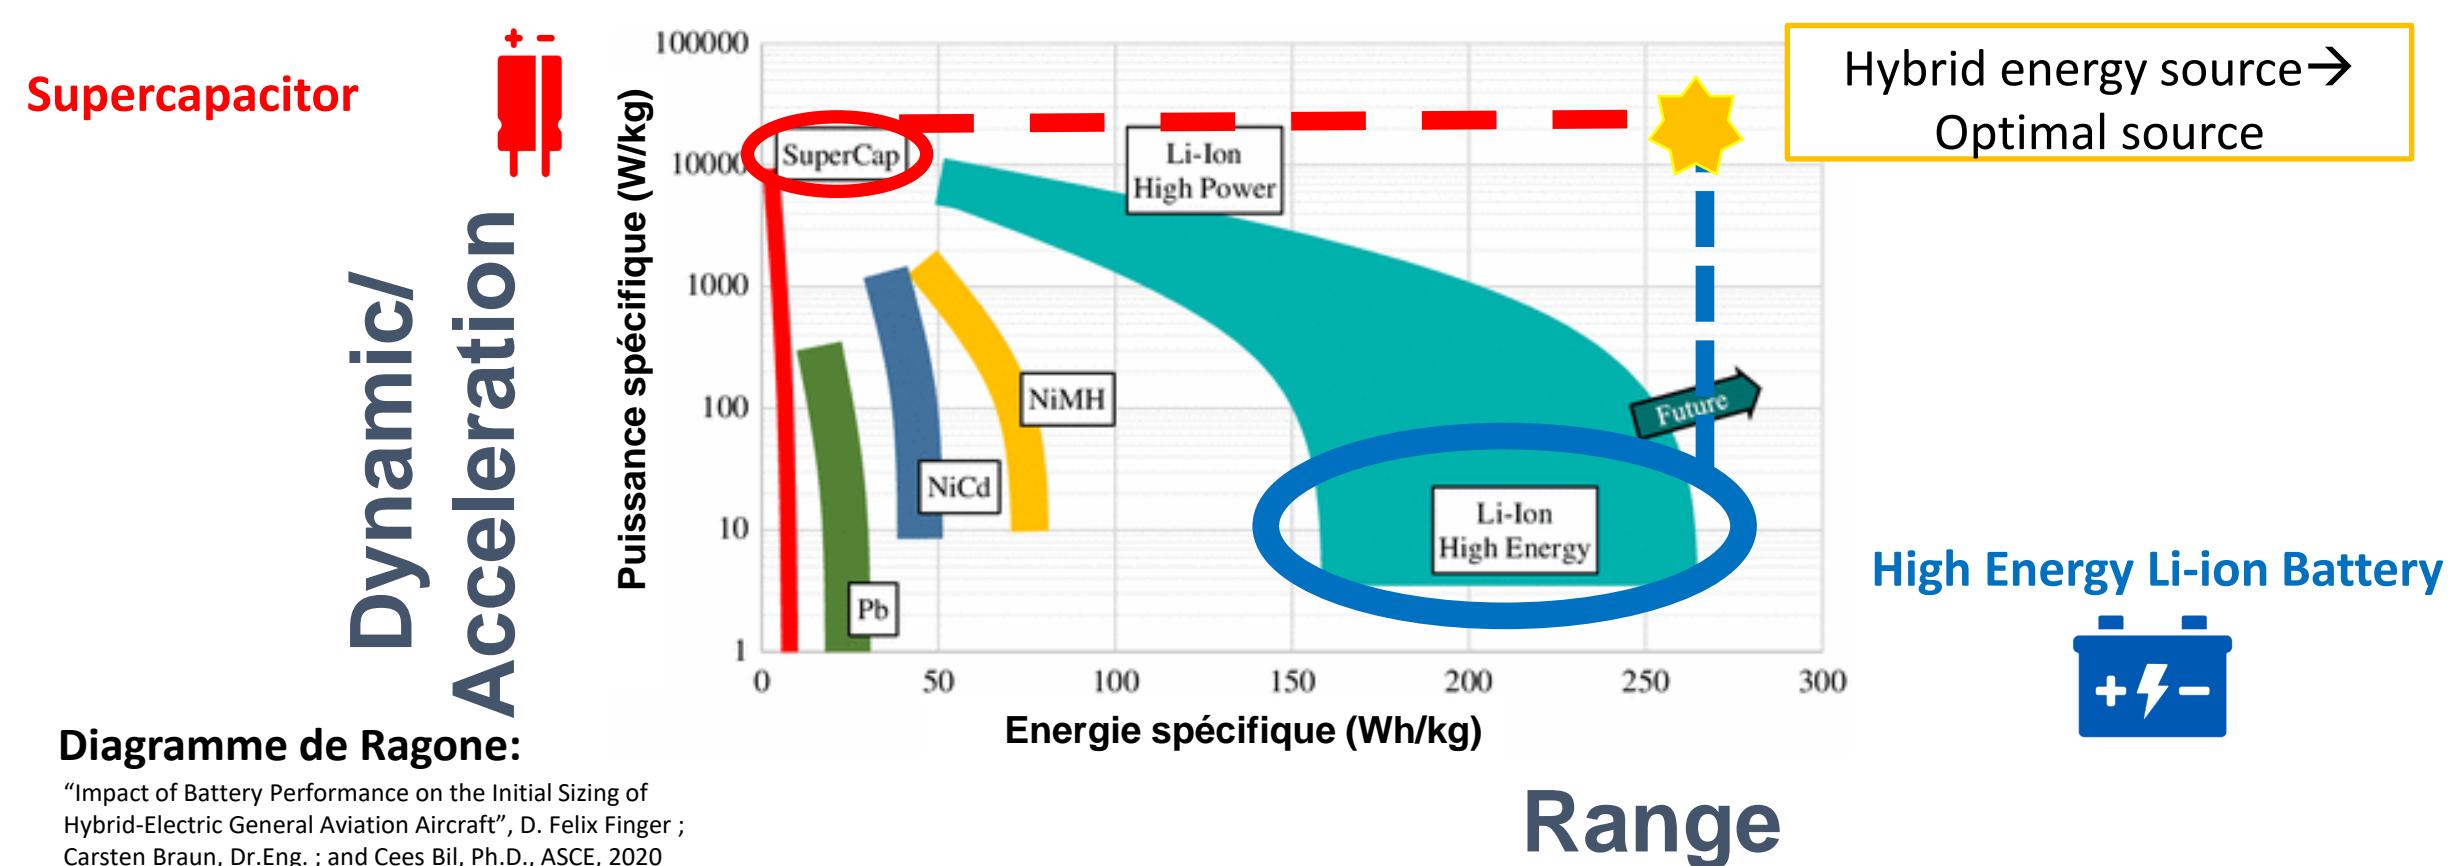

## **Observation 3 : Which leads to sub-optimal battery sizing**

- Oversized battery to ensure power and energy  
→ High cost and high volume/weight
- Undersized battery at the expense of the the power or the energy  
→ Acceleration of battery ageing (through power peaks and frequent charging), negative impact on battery performance (ex: regenerative phases)

**Weight, Cost, Volume, Ageing**

## II. Activity and Solution

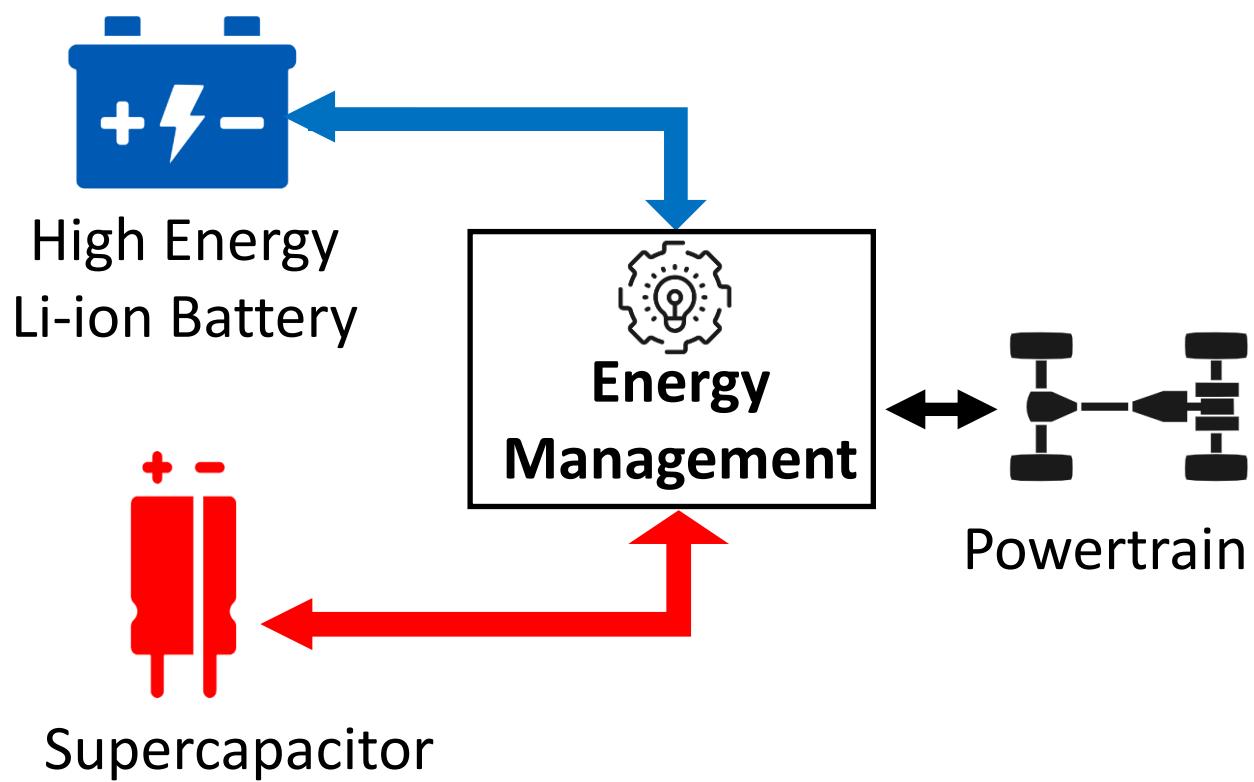

### Li-ion Battery / Supercapacitor Hybrid Energy Storage System

"Impact of Battery Performance on the Initial Sizing of Hybrid-Electric General Aviation Aircraft", D. Felix Finger ; Carsten Braun, Dr.Eng. ; and Cees Bil, Ph.D., ASCE, 2020

## II. Activity and Solution

### Hybrid Energy Storage System: Li-ion Battery, Supercapacitor, DC/DC Converter, Algorithm

#### Goals:

- Battery is used to ensure the vehicle range
- While supercapacitor handle power peaks (dynamics)
  - Supercapacitors act like buffers

# III. Value proposition

*OptHySource project:*

## Goals :

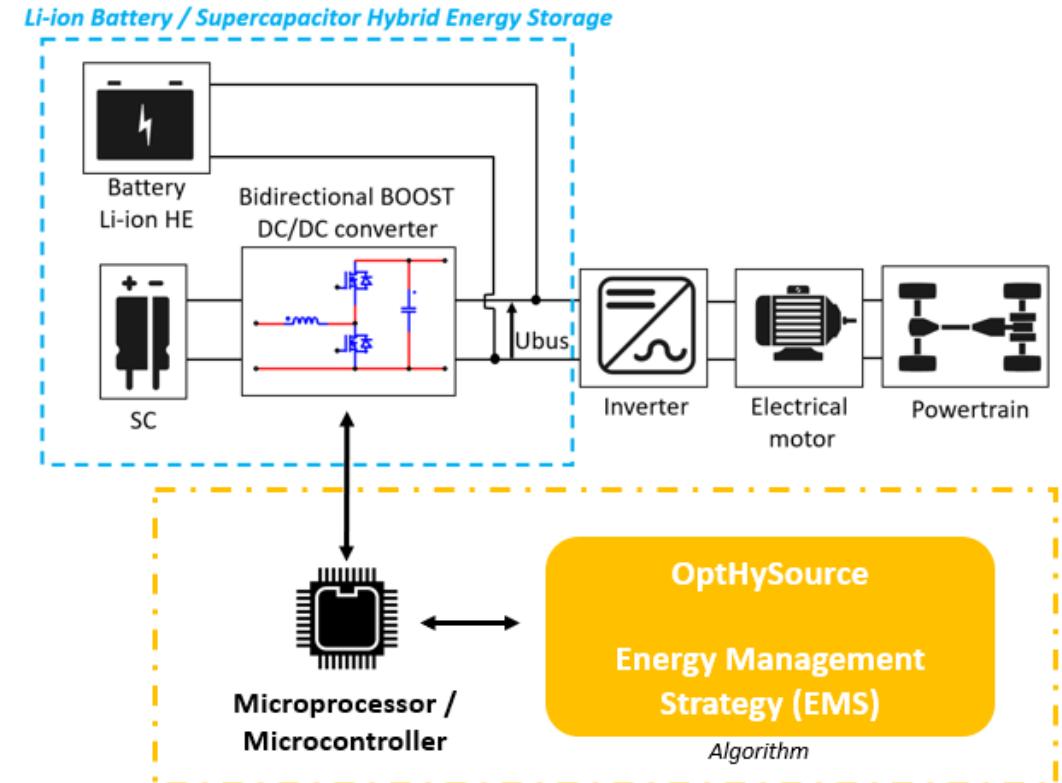

- Li-ion battery / Supercapacitor is an **obvious** technology
- Our goal is to make it **accessible**
- Improve **electric mobility**

# III. Value proposition

*OptHySource project:*

## 1. Software:

1. A Sizing Algorithm for Hybrid Energy Storage System
2. A Real-Time Energy Management Strategy (EMS) using optimization tools

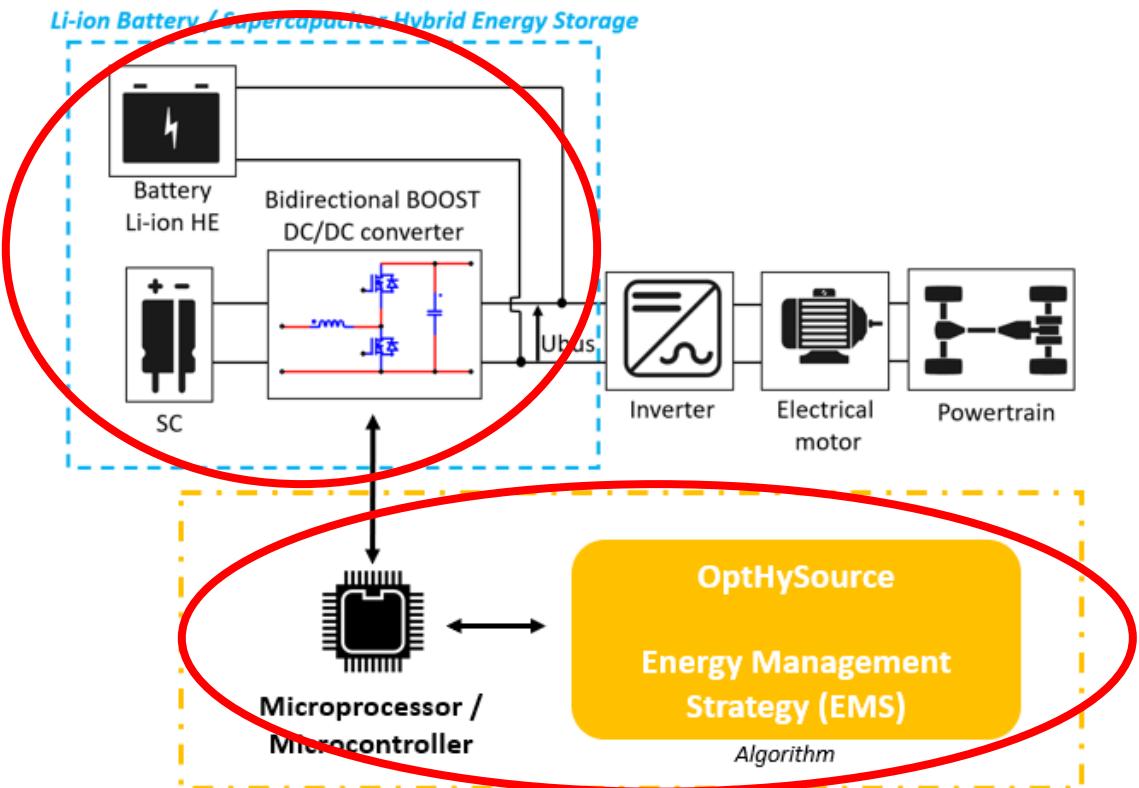

# III. Value proposition

*OptHySource project:*

## 1. Hardware:

1. Proposition source hybride complète  
(Batterie + SC + DC/DC + Algo)

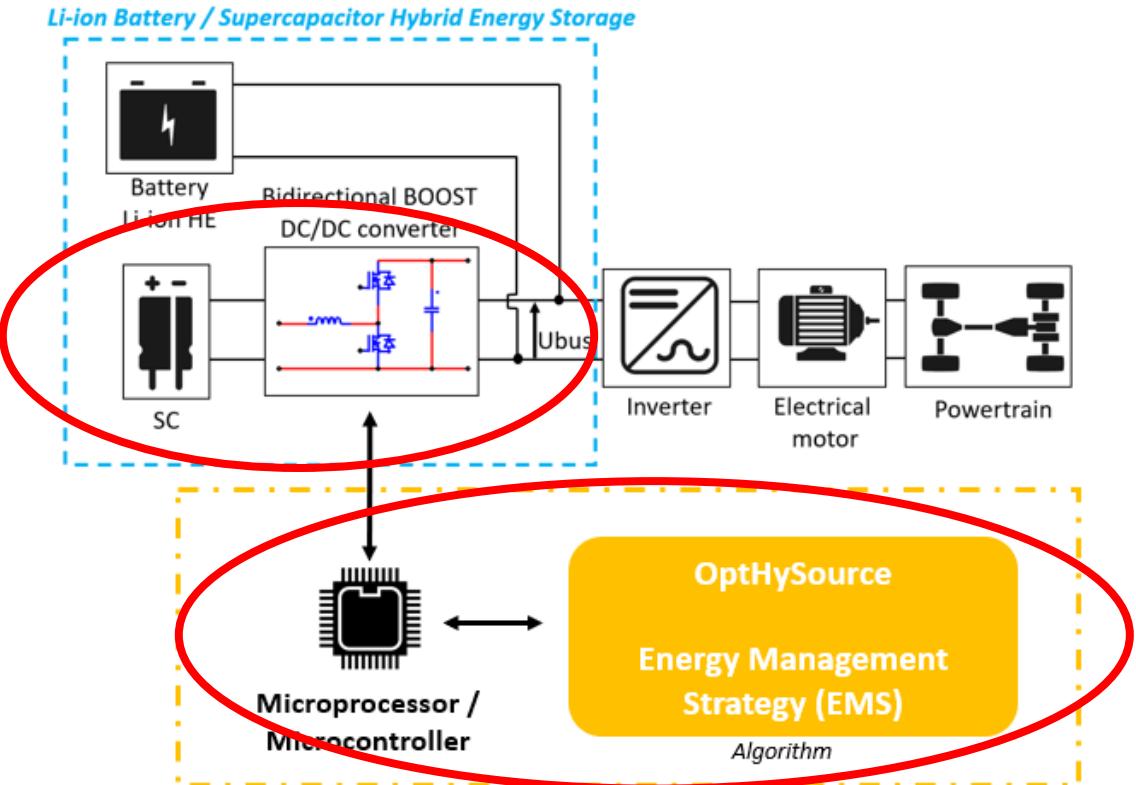

# III. Value proposition

*OptHySource project:*

## 1. Hardware:

1. Proposition source hybride complète  
(Batterie + SC + DC/DC + Algo)
2. Proposition source hybride partielle  
( SC + DC/DC + Algo)

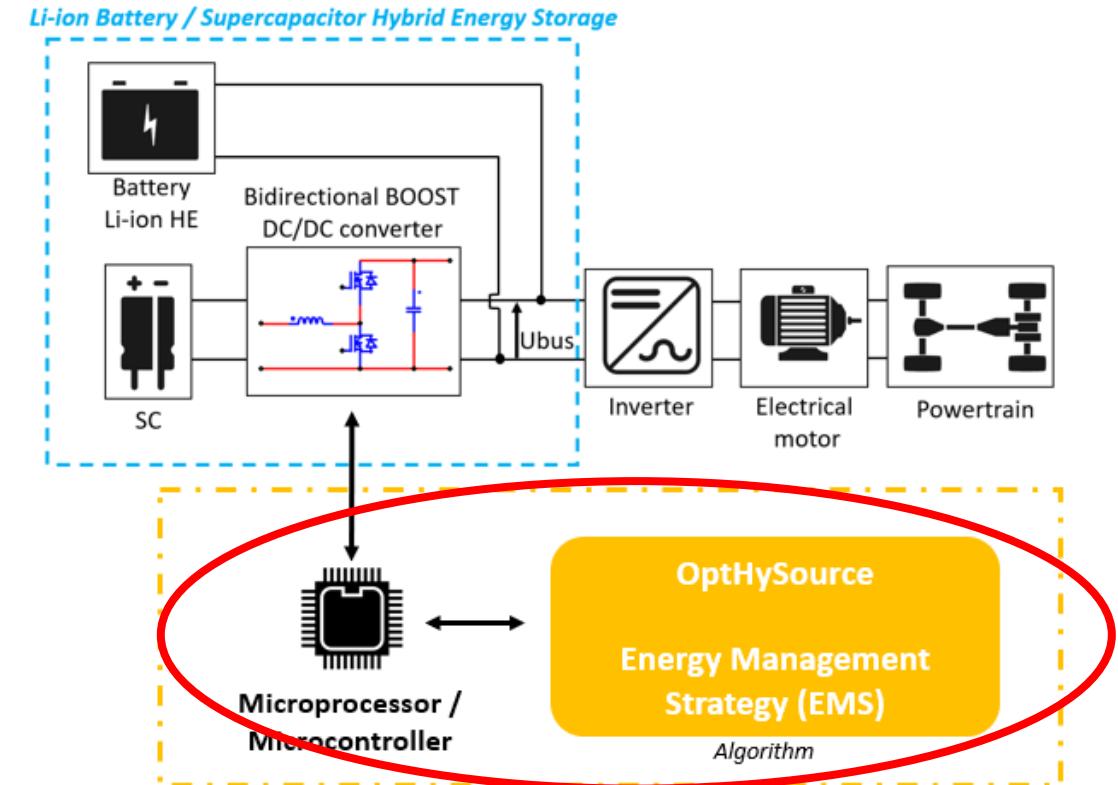

# III. Value proposition

*OptHySource project:*

## 1. Hardware:

1. Proposition source hybride complète  
(Batterie + SC + DC/DC + Algo)
2. Proposition source hybride partielle  
(SC + DC/DC + Algo)
3. Proposition source hybride software  
(Algorithme)

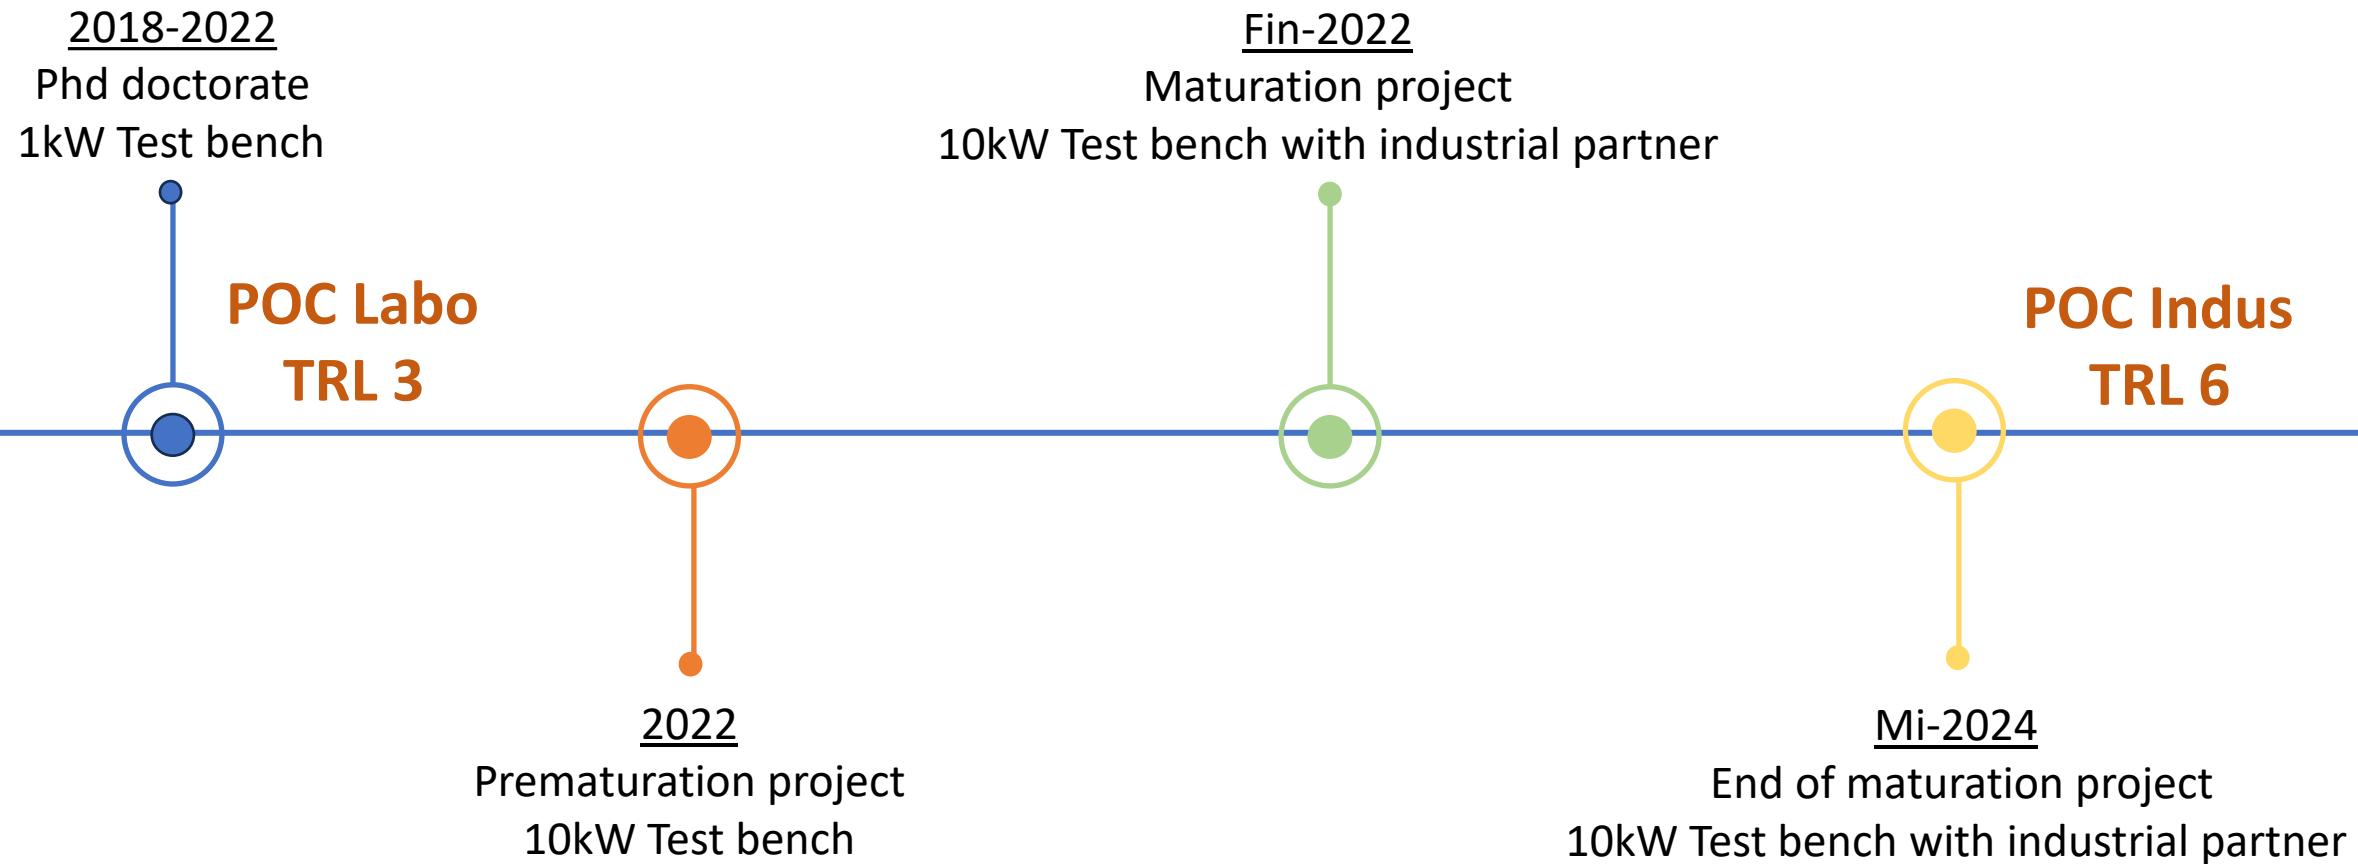

# III. Value proposition

*OptHySource project:*

**Benefits:**

- Optimal Sizing
- Better performances (energy + power)
- 100% energy recovery during braking phases (losses)
- Total Cost of Ownership (TCO) improved
  
- Better ageing indicators compared to classic EMS
- Aim up to 20-30% improvement of battery lifetime

## IV. Technical Roadmap

# IV. Technical Roadmap

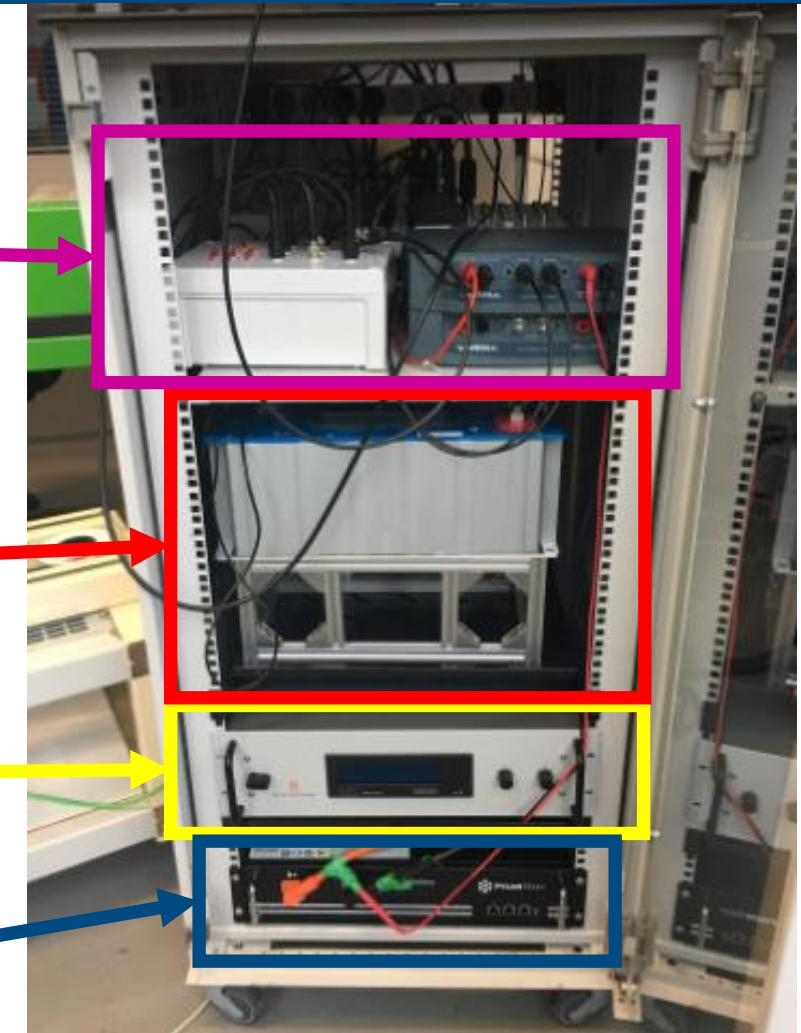

Banc de test d'1kW fonctionnel réalisé à l'INSA durant la thèse de Théophile PAUL

Dspace  
(MicroLabBox) ,  
capteurs de courant,  
tension , étage  
d'adaptation

Supercondensateurs  
48V 165F +  
Convertisseur DC/DC

Alimentation de  
puissance 15kW

Batterie 48V 50Ah

# IV. Discussions

- Interest?
- Need?
  - Sizing?
  - Performance?
  - Ageing?
- Collaboration?

# IV. Discussions

## To go further :

- Power cycles or Speed cycles
  - Sizing simulation
  - EMS simulation
- Spécification (Battery Voltage, max current,...)

# Thank you for your attention!
