

Who we are

LiT-Met unites 21 partners across 13 countries to evaluate liver transplantation versus resection for colorectal liver metastases using multidisciplinary clinical and real-world evidence.

What we are working on

We combine clinical research, AI, molecular biology, economics and patient outcomes to identify who benefits from liver transplantation and support safe, equitable implementation.

What's the one thing we need next

We need broader clinical collaboration and evidence to refine patient selection, validate AI decision tools and support future transplantation guidelines.
