

Applications in water environment

GFRP shaft-ladders (EN14396) or safety cage access ladders (EN14122) for all possible situations:

Safe access for shaft ladders;

- telescopic entry/exit styles made from stainless steel or GFRP
- pull-up ladder section

A lowerable ladder section is also available for shaft ladders. This solution prevents blockage or disruption of the flow in the pipes whenever the ladder is not in use.

Applications in water environment

All solutions can be produced using isophthalic polyester resin or vinyl ester resin for highly aggressive environments.

The picture above shows a mobile solution based on three different materials: stainless steel, isophthalic polyester and vinyl ester.
