SCEMAI®

Bring the data to life

One AI Platform for
all the sensors

To gather information, industries use sensors. Sensors from different vendors. Different platforms.

Managers and directors then have to collect this information and integrate it into excel sheets and analyze and process this data to make decisions. Decisions that the next day may be outdated.

But we have developed an online and offline data collection, analysis and monitoring system that uses artificial intelligence algorithms.

Our Sensory surveillance system ensures a better energy use, predict maintenance, operational and strategic saves of up to 30%. It gives you more than enough time to enjoy life.

Competitive Advantages

Easy to use
without expensive long hours of training

User-Friendly platform to access anywhere on the globe

Modular System
allowing for phased investment

Design & Brand
to give credibility to the market

Agnostic protocols and high levels of **data security**

AI Virtual Assistant

We guarantee a strict code of **ethics in data management**, not sharing confidential information or selling sensitive data

Data Security

Data Encryption

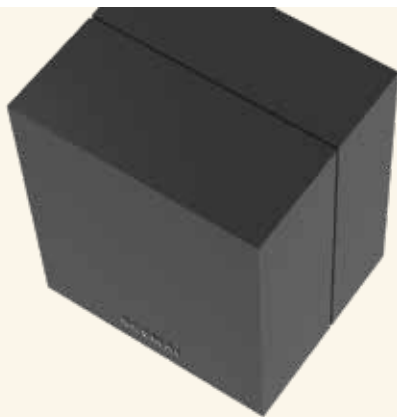

Data Backup to the Cloud

Password Protection

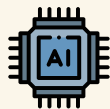

Identity and Access

Management (IAM)

Intrusion Detection
