

Our SaaS Solutions:

Address the full lifecycle of all sustainability plans on one platform.

Kausal Watch | Monitoring tool for Cities'/Regions' climate actions

Makes climate work within the organization more efficient. Distributed data updates and automatic real-time dashboards reduce overhead related to managing, communicating, and reporting on climate work publicly.

Kausal Paths | Managing GHG inventories and scenarios

Understand, visualize, and communicate the long-term impact of organizations' climate work. Automates data management, visualizes impacts (emissions, financial, health), and supports organizational leadership in data-based decision-making.

Kausal 2024

Value for the Public Sector:

Make your City's/Region's climate work visible to internal and external stakeholders.

Improve horizontal and vertical leadership in your organization by enabling cross-departmental engagement and progress visualization per department.

See the **impacts** of the organization in the big picture and take more **decisive actions**.

Concentrate on **strategic planning and implementation** support instead of reporting and collecting data.

Stay constantly **up to date on the progress** of the climate plan and learn from others.

Improve data-based decision making: Facilitate the discussion between experts, citizens, and politicians, helping them find an optimal combination of climate actions.

Kausal

Kausal helps cities and regions to turn their sustainability goals into action through a world-class digital platform that enables accuracy, transparency, and smarter collaboration around key data.

Kausal develops a software-as-a-service for organisations to set clear climate targets, build actionable climate plans and stay on track to achieve them. The team has first-hand experience leading public climate work.

We help City and Regional authorities currently in 3 continents, in the US, Canada, UK and Europe, including cities such as San Diego, Cologne, Zürich, Lahti, Indigoshire & Stevenage.
