Biometric signature

Biometric signature technology enables the signing of digital documents with handwritten signatures using a tablet and digital pen.

During signing, unique data such as stylus tilt, pressure, and acceleration are collected.

Document storage

In customer service centres
At public and financial institutions

At reception desks and in private offices
At local governments, insurance agencies, healthcare institutions, law firms, and HR departments

In mobile services
At telecommunications companies, real estate agencies, by assessors and quality-assurance experts

Guaranteed security.

The data from writing movements is encrypted and stored.

In case of doubt or a dispute, a forensic expertise centre performs a graphometric examination.

- ✓ Impossible to forge a signature
- ✓ A biometric signature is equivalent to a signature signed with a pen

Elpako is a qualified service provider under the eIDAS Regulation throughout the European Union. Complies with ISO/IEC 27001 information security management standard.

Insured for third-party and professional liability.

Elpako's biometric signature is additionally secured with qualified time stamps.
