Market Garden Vitaminstation 2

Date of Registration	2025-05-18
Project Name	Market Garden Vitaminstation 2
Project Holder	Vitaminstation 2
Project Area in hectares	27
Regenerative Solutions applied	Syntropic Agriculture, Stepping Stone Biotope, Humus Production, Cover Crops

Voluntary Attributes

Area-under-Management Date	2015-03-01
Regeneration Strategy	Soil is viewed not just as a growing medium, but as a living, dynamic foundation for all production. Soil fertility here refers to the soil's capacity to provide nutrients, support healthy structure, and enable biological activity. Soil health, however, goes further: it encompasses the soil's systemic ability to function as a habitat for diverse organisms, manage water effectively, cycle nutrients efficiently, and act as a stable carbon store. These functions are essential for sustainable, climate-conscious market gardening.
Policy Programs	Common Agricultural Policy CAP, Green Claims Directive - European Commission, Natürlich gut essen - City of Vienna
Market Makers	Regional Farmer Market – Trader

Project Description

Market Garden Vitaminstation 2 operates according to bio-intensive and regenerative agriculture principles, maximising the natural yield potential of its land through careful observation and
