ARCHITECTURE & KLIMA ENGINEERING

# Together, to grow

We share experiences, knowledge, paths, welcoming the complexity of the contemporary world as a **daily challenge and continuous growth**. Together we complement expertise in all disciplines needed for the built environment to match increasingly demanding commissions. Our **tested synergies** help us to face and analyze every technical and strategic aspect required by a project.

AKE s.r.l. Architecture Klima Engineering is made up of a young and dynamic team of experts, who have been working in the architectural engineering field since 2006. In addition, the team has synergistically focused its activities on the integrated design field. This company is the result of a long professional activity path carried out by each team member and just recently has embraced a more structured form of work where it is possible to identify different areas of expertise. Over the years, the company's organizational structure, the availability of cutting-edge technology tools and the cooperation with several professional-skilled technicians have allowed us to offer an increasingly wide range of quality services to private clients, businesses and public administrations in various fields.

# Total

We face every project in an **integrated and dynamic** way, linking architecture and engineering to essential topics such as **environment, energy, sustainability and equity**.

We have developed an **adaptive design approach** that spots **changing factors** in the construction market to offer **brand-new and effective perspectives of intervention**.

# design

We develop an integrated design within the **BIM framework** right from the commission initiation phase. Each working team – which is made up of engineers, architects and specialized technicians – initiates the design process that includes all the **structural**, engineering, and architectural aspects linked to the realization of the project. The aim is reaching a balanced union of

design and technology that does not overlook any area, so as to create an articulated and efficient project.

# Glocal projects

In our projects we continuously adjust our intervention scalability to shield the identity of local contexts while connecting it to contemporary **global challenges**. We deepen our insight into the complexity of our operational areas, providing a **creative connection** that brings out the different souls of a **project**.

We are able to connect supposedly remote contexts through BIM methodology and technological innovation, thanks to our multidisciplinary approach, large and well-structured team and acquired know-how. The peculiarity that characterizes our projects is a rigorous and integrated working method, which allows us to manage complexity by creating optimization paths focused on quality and sustainability.

Special mention

# Smart Team, smart cities

**Teamwork** is at the core of our processes.

We are a **multidisciplinary team** of young architects, engineers and design specialists, who develop a **fresh perspective** on the past, the present and the future of our cities through their daily work.

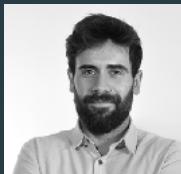

We employ flexible working tools and share **universal ethical principles** by which we inspire our activities.

In an **ever-growing** industry we  
embrace every change to **challenge**  
ourselves. We constantly modify  
and adapt our work processes to  
keep up with **new solutions and  
technologies**.

Our activities contribute to the  
**social development** of the territories  
in which they are implemented,  
combining the goal of economic  
efficiency with the ethical  
responsibility of its activities.  
This is a further reason why we  
adopted a **code of professional**

**conduct**, which represents the  
company benchmarking related to  
every employee's activity, as well as  
to **partners and final recipients** of  
our works.

# Built from below

Our company has been "built from below" with sound ambitions flourishing in the suburbs. The main goal is to pursue the core of every **contemporary design challenge**. Our projects arise in the South within the sunshine warmth, the heady wind, the scent of the sea and the taste of our land.

This is another reason why our projects are completely **sustainable**, starting from the conceptual stage to the construction one.

Nowadays, it is impossible to conceive projects without considering their and their impact on future generations.

Therefore, each activity of our company adopts a sustainable approach by carefully choosing technologies, solutions and low-impact materials that put circular economies first.

Energy savings

Renewable sources

Environmental sustainability

Circular economy

Over the years we have acquired specialized energy-efficient and environmental sustainability building skills through international green-building certification protocols that attest the highest design standards for brand new and existing constructions.
